### Section 3 – APPLICATION OF RATES

#### 3.1 INTRODUCTION

The regulations set forth in this section govern the application of rates for services contained in other sections of this tariff

#### 3.2 CHARGES BASED ON DURATION OF USE

3.2.1 Where charges for a service are specified based on the duration of use, such as the duration of a telephone call, the following rules apply:

- (A) Calls are measured in durational increments identified for each service. All calls that are fractions of a measurement increment are rounded-up to the next whole unit.
- (B) Timing on completed calls begins when the call is answered by the called party. Answering is determined by hardware answer supervision in all cases where this signaling is provided by the terminating local carrier and any intermediate carrier(s). Timing for operator service person-to-person calls start with completion of the connection to the person called or an acceptable substitute, or to the PBX station called.
- (C) Timing terminates on all calls when the calling party hangs up or the Company's network receive an off-hook signal from the terminating carrier.
- (D) Calls originating in one time period and terminating in another will be billed in proportion to the rates in effect during different segments of the call.
- (E) All times refer to local time.

---

Section 3 – APPLICATION OF RATES (Cont'd)

3.3 RATES BASED UPON DISTANCE

3.3.1 Where charges for a service are specified based upon distance, the following rules apply:

- (A) Distance between two points is measured as airline distance between the rate centers of the originating and terminating telephone lines. The rate center is a set of geographic coordinates, as referenced in the National Exchange Cant Association, Inc. Tariff FCC No.4, associated with each NPA-NXX combination (where NPA is the area code and NXX is the first three digits of a seven-digit telephone number). Where there is no telephone number associated with an access line on the Company's network (such as a dedicated 800 or WATS access line), the Company will apply the Rate Center of the Customer's main billing telephone number.
- (B) The airline distance between any two Rate Centers is determined as follows:
  - (1) Obtain the "V" (vertical) and "H" (horizontal) coordinates for each Rate Center from the NECA tariff.
  - (2) Compute the difference between the "V"<sup>1</sup> coordinates of the two Rate Centers; and the difference between the two "H" coordinates.
  - (3) Square each difference obtained in step (2) above.
  - (4) Add the square of the "V" difference and the square of the "H" difference obtained in step (3) above.
  - (5) Divide the sum of the squares by 10. Round to the next higher whole number if any fraction is obtained.

---

Section 3 – APPLICATION OF RATES (Cont'd)

3.3 RATES BASED UPON DISTANCE (Cont'd)

3.3.1 (Cont'd)

(6) Obtain the square root of the whole number result obtained above. Round to the next higher whole number if any fraction is obtained. This is the airline mileage.

(7) FORMULA =

$$\frac{(V1-V2)^2 + (H1-H2)^2}{2}$$

3.4 MINIMUM CALL COMPLETION RATE

A Customer can expect a call completion rate (number of calls completed/number of calls attempted) of not less than 99.5% during peak use periods for the Company services.

4.5 CUSTOM LOCAL AREA SIGNALING SERVICES (CLASS)

4.5.1 Per Call Blocking

Per Call Blocking (Calling Number Delivery Blocking) - Enables customers to prevent the disclosure of their telephone number on a per call basis to the called party. The disclosure of the calling party's number can be prevented on a per call basis by dialing \*67 from a touch-tone phone, or 1167 from a rotary dial phone, to activate the block. This action must be repeated each time a call is made to prevent the disclosure of the calling party's telephone number. If the called party has a display device, a privacy indication will appear instead of the calling party's telephone number. If the called party has a display device, a privacy indication will appear instead of the calling party's telephone number. Per call blocking will be available on a universal basis to all eligible customers. All public and semi-public payphones of CenturyTel Solutions will be equipped with Per Call Blocking.

4.5.2 Per Line Blocking

Per Line Blocking (Calling Number Delivery Suppression) - Enables Customers to prevent the disclosure of their telephone number on all outgoing calls, without the necessity of an activation code. If the called party has a display device, a privacy indication will appear instead of the calling party's telephone number. Per line Blocking will be provided at no monthly charge on an optional basis to published and non-published customers at their discretion. To deactivate the privacy status, the customer would dial \*82 from a touch-tone phone or 1182 from a rotary dial phone before placing a call. After completion of the call, the line reverts back to the privacy status. Law enforcement, domestic shelters and other special agencies will be offered free Per Line Blocking. Per Line Blocking will not be available to public, semi-public, two-party and four-party service customers.

4.5 CUSTOM LOCAL AREA SIGNALING SERVICES (CLASS) (Cont'd)

4.5.3 Call Return

Call Return (Automatic Recall) - Enables a customer to return the last incoming call whether or not it was answered. The customer dials the activation code of \*69 from a touch-tone phone, or 1169 from a rotary dial phone, and the last incoming call is announced. If the incoming call was placed from a line designated as "private", a fast busy tone will be heard preventing the activation of the Call Return feature. Office-wide Call Return-Block -to-Private prevents Call Return activation when a local or toll calling party blocks their number. To activate the Call Return function the customer would then dial "I". If the line is busy when the customer activates the service, a confirmation announcement is heard, the customer hangs up, and a queuing process begins. For the next thirty minutes both the calling and called parties' lines are checked periodically. The call setup is made when both the originating and terminating lines are idle. After activation of the feature, the originating and terminating customers may place other calls without affecting the call return service status. Up to 30 calls may be held in queue for the Customer's Call Return activation. The call backs may be to areas where the toll charge would be applicable. This feature cannot be activated for all telephone numbers such as numbers with the 800 or 900 prefixes, or PBX extensions.

## Section 11 - INTEREXCHANGE SERVICE

### 11.1 RATES CHARGED BASED ON TIMING OF CALLS

The Company will offer interexchange services throughout all 88 counties in the State of Ohio. Where charges for service are specified based on the timing of calls, such as the duration of a telephone call, the following rules apply;

#### 11.1.1 When Billing Charges Begin and Terminate For Phone Calls

The Customer's long distance usage charge is based on the actual usage of the Company's network. Usage begins when the called party picks up the receiver, (i.e. when 2 way communication, often referred to as "conversation time," is possible). When the called party picks up is determined by hardware answer supervision in which the local telephone company sends a signal to the switch or the software utilizing audio tone detection. When software answer supervision is employed, up to 60 seconds of ringing is allowed before it is billed as usage of the network. A call is terminated when the calling or called party hangs up.

#### 11.1.2 Billing Increments

Unless otherwise specified in this tariff, the minimum call duration for billing purposes is 1 minute for a connected call. Calls beyond 1 minute are billed in 1 minute increments.

#### 11.1.3 Per Call Billing Charges

Billing will be rounded up to the nearest penny for each call.

#### 11.1.4 Uncompleted Calls

There shall be no charges for uncompleted calls.

Section 11 - INTEREXCHANGE SERVICE (Cont'd)

## 11.2 RATES BASED UPON CALCULATION OF DISTANCE

Where the charges for service are specified based upon distance, the following rules apply:

- a. Distance between two points is measured as airline distance between the Rate Centers of the originating and terminating telephone lines. The Rate Center is set of geographic coordinated, as referenced in National Exchange Carrier Association, Inc. Tariff FCC No.4, associated with each NPA-NXX combination (where NPA is the area code and NXX is the first three digits of a seven-digit telephone number). Where there is no telephone number associated with an access line on the Company's network (such as dedicated 800 or WATS access line), the Company will apply the Rate Center of the Customer's main billing telephone number.
- b. The airline distance between any two Rate Centers is determined as follows:
  - i. Obtain the "V" (vertical) and "H" (horizontal) coordinates for each Rate Center from the above-referenced NECA tariff.
  - ii. Compute the difference between the "V" coordinates of the two rate centers; and the difference between the two "H" coordinates.
  - iii. Square each difference obtained in step (B) above.
  - iv. Add the square of the "V" difference and the square of the "H" difference obtained in step (C).
  - v. Divide the sum of the squares by 10. Round to the next higher whole number if any fraction is obtained.
  - vi. Obtain the square root of the whole number result obtained above. Round to the next higher whole number if any fraction is obtained this is the airline mileage.
  - vii. Formula =

$$\sqrt{\frac{(V1 - V2)^2 + (H1 - H2)^2}{10}}$$
