

Case No.: <u>14-1256-EL-EEC</u>

Mercantile Customer:	Procter & Gamble
Electric Utility:	Duke Energy
Program Title or Description:	Air Cooled Chiller Tune Ups

Rule 4901:1-39-05(F), Ohio Administrative Code (O.A.C.), permits a mercantile customer to file, either individually or jointly with an electric utility, an application to commit the customer's existing demand reduction, demand response, and energy efficiency programs for integration with the electric utility's programs. The following application form is to be used by mercantile customers, either individually or jointly with their electric utility, to apply for commitment of such programs in accordance with the Commission's pilot program established in Case No. <u>10-834-EL-POR</u>

Completed applications requesting the cash rebate reasonable arrangement option (Option 1) in lieu of an exemption from the electric utility's energy efficiency and demand reduction (EEDR) rider will be automatically approved on the sixty-first calendar day after filing, unless the Commission, or an attorney examiner, suspends or denies the application prior to that time. Completed applications requesting the exemption from the EEDR rider (Option 2) will also qualify for the 60-day automatic approval so long as the exemption period does not exceed 24 months. Rider exemptions for periods of more than 24 months will be reviewed by the Commission Staff and are only approved up the issuance of a Commission order.

Complete a separate application for each customer program. Projects undertaken by a customer as a single program at a single location or at various locations within the same service territory should be submitted together as a single program filing, when possible. Check all boxes that are applicable to your program. For each box checked, be sure to complete all subparts of the question, and provide all requested additional information. Submittal of incomplete applications may result in a suspension of the automatic approval process or denial of the application.

Any confidential or trade secret information may be submitted to Staff on disc or via email at <u>ee-pdr@puc.state.oh.us</u>.

Section 1: Mercantile Customer Information

Name: Procter & Gamble

Principal address: **11510 Reed Hartman Hwy Blue Ash, OH 45241**

Address of facility for which this energy efficiency program applies:

8340 Mason Montgomery Road	Mason,	ОН	45040
11473 Grooms Road	Blue Ash,	ОН	45241
6083 Center Hill Ave	Cincinnati,	ОН	45224

Name and telephone number for responses to questions:

Megan Fox, (513)287-3367

Electricity use by the customer (check the box(es) that apply):

- □ The customer uses more than seven hundred thousand kilowatt hours per year at the above facility. (Please attach documentation.)
- ✓ The customer is part of a national account involving multiple facilities in one or more states. (Please attach documentation.)

Section 2: Application Information

- A) The customer is filing this application (choose which applies):
 - □ Individually, without electric utility participation.

✓ Jointly with the electric utility.

- B) The electric utility is: **Duke Energy**
- C) The customer is offering to commit (check any that apply):
 - Energy savings from the customer's energy efficiency program. (Complete Sections 3, 5, 6, and 7.)
 - □ Capacity savings from the customer's demand response/demand reduction program. (Complete Sections 4, 5, 6, and 7.)
 - ✓ Both the energy savings and the capacity savings from the customer's energy efficiency program. (Complete all sections of the Application.)

Section 3: Energy Efficiency Programs

- A) The customer's energy efficiency program involves (check those that apply):
 - □ Early replacement of fully functioning equipment with new equipment. (Provide the date on which the customer replaced fully functioning equipment, and the date on which the customer would have replaced such equipment if it had not been replaced early. Please include a brief explanation for how the customer determined this future replacement date (or, if not known, please explain why this is not known)).
 - Installation of new equipment to replace equipment that needed to be replaced The customer installed new equipment on the following date(s):
 <u>Month and Year</u>
 - □ Installation of new equipment for new construction or facility expansion. The customer installed new equipment on the following date(s):
 - ✓ Behavioral or operational improvement.

2013 installation

- B) Energy savings achieved/to be achieved by the energy efficiency program:
 - If you checked the box indicating that the project involves the early replacement of fully functioning equipment replaced with new equipment, then calculate the annual savings [(kWh used by the original equipment) – (kWh used by new equipment) = (kWh per year saved)]. Please attach your calculations and record the results below:

Annual savings: _____kWh

2) If you checked the box indicating that the customer installed new equipment to replace equipment that needed to be replaced, then calculate the annual savings [(kWh used by less efficient new equipment) – (kWh used by the higher efficiency new equipment) = (kWh per year saved)]. Please attach your calculations and record the results below:

Annual savings: _____kWh

Please describe any less efficient new equipment that was rejected in favor of the more efficient new equipment.

 If you checked the box indicating that the project involves equipment for new construction or facility expansion, then calculate the annual savings [(kWh used by less efficient new equipment) – (kWh used by higher efficiency new equipment) = (kWh per year saved)]. Please attach your calculations and record the results below:

Annual savings: XXXXX kWh (See Attachment 1 - Appendix 2)

Please describe the less efficient new equipment that was rejected in favor of the more efficient new equipment.

4) If you checked the box indicating that the project involves behavioral or operational improvements, provide a description of how the annual savings were determined.

Annual savings: 1,566,300 kWh (See Attachment 1 - Appendix 2)

Section 4: Demand Reduction/Demand Response Programs

- A) The customer's program involves (check the one that applies):
 - ✓ Coincident peak-demand savings from the customer's energy efficiency program.
 - □ Actual peak-demand reduction. (Attach a description and documentation of the peak-demand reduction.)
 - D Potential peak-demand reduction (check the one that applies):
 - □ The customer's peak-demand reduction program meets the requirements to be counted as a capacity resource under a tariff of a regional transmission organization (RTO) approved by the Federal Energy Regulatory Commission.
 - □ The customer's peak-demand reduction program meets the requirements to be counted as a capacity resource under a program that is equivalent to an RTO program, which has been approved by the Public Utilities Commission of Ohio.
- B) On what date did the customer initiate its demand reduction program?

Month(s) and Year(s)

C) What is the peak demand reduction achieved or capable of being achieved (show calculations through which this was determined):

2004.86 KW (See Attachment 1 - Appendix 2)

Section 5: Request for Cash Rebate Reasonable Arrangement (Option 1) or Exemption from Rider (Option 2)

Under this section, check the box that applies and fill in all blanks relating to that choice.

Note: If Option 2 is selected, the application will not qualify for the 60-day automatic approval. All applications, however, will be considered on a timely basis by the Commission.

A) The customer is applying for:

✓ Option 1: A cash rebate reasonable arrangement.

OR

□ Option 2: An exemption from the energy efficiency cost recovery mechanism implemented by the electric utility.

OR

- □ Commitment payment
- B) The value of the option that the customer is seeking is:
 - Option 1: A cash rebate reasonable arrangement, which is the lesser of (show both amounts):
 - ✓ A cash rebate of \$8,466.00 (See Attachment 1 Appendix 3).
 - Option 2: An exemption from payment of the electric utility's energy efficiency/peak demand reduction rider.
 - An exemption from payment of the electric utility's energy efficiency/peak demand reduction rider for _____ months (not to exceed 24 months). (Attach calculations showing how this time period was determined.)

OR

A commitment payment valued at no more than \$_____. (Attach documentation and calculations showing how this payment amount was determined.)

- OR
- Ongoing exemption from payment of the electric utility's energy efficiency/peak demand reduction rider for an initial period of 24 months because this program is part of the customer's ongoing efficiency program. (Attach documentation that establishes the ongoing nature of the program.) In order to continue the exemption beyond the initial 24 month period, the customer will need to provide a future application establishing additional energy savings and the continuance of the organization's energy efficiency program.)

Section 6: Cost Effectiveness

The program is cost effective because it has a benefit/cost ratio greater than 1 using the (choose which applies):

- Total Resource Cost (TRC) Test. The calculated TRC value is: ______
 (Continue to Subsection 1, then skip Subsection 2)
- Utility Cost Test (UCT). The calculated UCT value is X.XX (See Attachment 1 Appendix 4)

Subsection 1: TRC Test Used (please fill in all blanks).

The TRC value of the program is calculated by dividing the value of our avoided supply costs (generation capacity, energy, and any transmission or distribution) by the sum of our program overhead and installation costs and any incremental measure costs paid by either the customer or the electric utility.

The electric utility's avoided supply costs were _____.

Our program costs were _____.

The incremental measure costs were _____.

Subsection 2: UCT Used (please fill in all blanks).

We calculated the UCT value of our program by dividing the value of our avoided supply costs (capacity and energy) by the costs to our electric utility (including administrative costs and incentives paid or rider exemption costs) to obtain our commitment.

Our avoided supply costs were **\$391,090 (See Attachment 1 - Appendix 5).**

The utility's program costs were **\$30,550(See Attachment 1 - Appendix 6)**.

The utility's incentive costs/rebate costs were **\$8,466 (See Attachment 1 - Appendix 3)**.

Section 7: Additional Information

Please attach the following supporting documentation to this application:

Narrative description of the program including, but not limited to, make, model, and year of any installed and replaced equipment.

A copy of the formal declaration or agreement that commits the program or measure to the electric utility, including:

- 1) any confidentiality requirements associated with the agreement;
- 2) a description of any consequences of noncompliance with the terms of the commitment;
- 3) a description of coordination requirements between the customer and the electric utility with regard to peak demand reduction;
- 4) permission by the customer to the electric utility and Commission staff and consultants to measure and verify energy savings and/or peak-demand reductions resulting from your program; and,
- 5) a commitment by the customer to provide an annual report on your energy savings and electric utility peak-demand reductions achieved.

Refer to Offer Letter following this application

A description of all methodologies, protocols, and practices used or proposed to be used in measuring and verifying program results. Additionally, identify and explain all deviations from any program measurement and verification guidelines that may be published by the Commission.

Ohio Mercantile Self Direct Program

Application Guide & Cover Sheet

Questions? Call 1-866-380-9580 or visit www.duke-energy.com.

Email this form along with <u>completed Mercantile Self Direct Prescriptive or Custom applications</u>, proof of payment, energy savings calculations and spec sheets to <u>SelfDirect@Duke-Energy.com</u>. You may also fax to 1-513-629-5572.

Mercantile customers, defined as using at least 700,000 kWh annually or having an account in multiple locations are eligible for the Mercantile Self Direct program. Indicate which applies:

a single Duke Energy Ohio account with 700,000 kWh annual usage

an account with multiple locations

Please list Duke Energy account numbers below (attach listing of multiple accounts and/or billing history for other utilities as required):

Account Number	Annual Usage	Account Number	Annual Usage
2740-0759-01-0	36,000,000		

Self Direct rebates are available for completed Custom projects that have not previously received a Duke Energy Smart \$aver® Custom Incentive. Self Direct rebates are applicable to Prescriptive measures that were installed more than 90 days prior to submission to Duke Energy and have not previously received a Duke Energy Prescriptive rebate.

Self Direct Program rules allow for, though do not require, certain projects that are Prescriptive in nature under the Smart \$aver program to be evaluated using the Custom process in the Self Direct program. Use the list on page two as a guide to determine which Self Direct program best fits your project(s). Apply for Self Direct projects using the appropriate application forms in conjunction with this cover sheet.

Self Direct Program rules also allow for behaviorally based and/or no cost and low cost projects to receive rebates.

Please check each box to indicate completion/inclusion of the following program requirements:

All sections of	\boxtimes	Proof of payment.*	Manufacturer's Spec	Energy
appropriate			sheets	model/calculations and
application(s) are				detailed inputs for
completed		2		Custom applications

*If a single payment record is intended to demonstrate the costs of both Prescriptive & Custom projects, please include an additional document with an estimated breakout of costs for each Prescriptive and Custom energy conservation measure.

**Behavioral energy efficiency and demand reduction projects must be both measurable and verifiable. Provide justification with your application. Rebates for such projects may be small in magnitude.

#

CAPACITY	MODEL and DESCRIPTION	
215 - 380 TR 755 - 1340 kW	Model YMC ² – magnetic centrifugal compressor Unique Features: 30% less refrigerant, 73 dBA, OptiView [™] control panel, OptiSound [™] control, OptiSpeed [™] variable-speed drive Ideal Applications: comfort cooling, facilities requiring low sound levels, green / LEED [®] buildings	
250 - 3000 TR 880 - 10,550 kW	Model YK – centrifugal compressor Unique Features: OptiSpeed [™] variable-speed drive, heat-recovery capability, quick start feature, OptiSound [™] control, OptiView [™] control panel Ideal Applications: comfort cooling, heat-recovery sites, data centers	
2500 - 3500 TR 8800 - 12,000 kW	Model YK-EP – centrifugal compressors with economizer Unique Features: higher efficiency at design and off-design conditions, OptiSpeed [™] variable-speed drive, single control panel Ideal Applications: district cooling, process / industrial cooling, data centers, turbine inlet-air cooling	
1500 - 6000 TR 5300 – 21,100 kW	Model YD – dual centrifugal compressors Unique Features: smallest footprint per cooling ton in the industry, single OptiView™ control panel Ideal Applications: district cooling, retrofits, building additions	
300 - 2500 TR 1050 - 8800 kW	Model CYK – compound centrifugal compressors Unique Features: high-head and heat-pump capability Ideal Applications: air-cooled condensing, brine chilling, heat pump, and process / industrial cooling	
700 - 2800 TR 2460 - 9850 kW	Model YST – steam-turbine-drive centrifugal compressor * Unique Features: packaged steam condenser, automatic start-up, OptiView™ control panel Ideal Applications: co-generation, hybrid plants	
3000 - 5500 TR 10,550 - 19,350 kW	Titan Model OM – centrifugal compressor with electric-motor, steam-turbine, or gas-engine drive * Unique Features: flexibility, longest life expectancy, easily retrofitted Ideal Applications: district cooling, air-cooled condensing, brine chilling, heat pump, and process / industrial cooling	

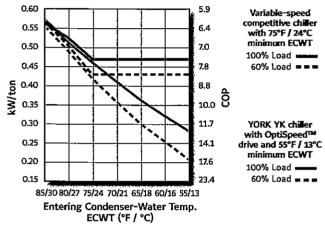

YORK[®] MODEL YK CENTRIFUGAL CHILLERS

Best route to real-world energy performance

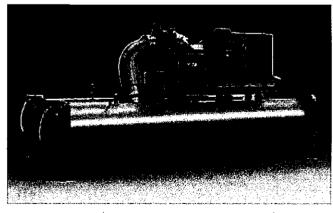

YORK[®] YK chillers deliver maximum efficiency

YORK YK chillers can utilize ECWTs as low as 55°F (13°C) to reach 0.20 kW/ton (18 COP) at off-design conditions, reducing instantaneous energy consumption by as much as 50%.

The capacity range of the YORK model YK chiller is 250 to 3,000 TR (880 to 10,540 kW). Both low-voltage (250 to 575 V) and medium-voltage (2,300 to 13.800 V) designs are available.

Real-world energy performance is essential

YORK[®] model YK centrifugal chillers, manufactured by Johnson Controls, provide the best route to real-world energy performance – the combined performance at all operating conditions, not just design. Because chillers in the real world operate nearly 99% of the time at off-design conditions, off-design performance is the major factor in energy consumption. That's why YK centrifugal chillers are engineered for maximum efficiency at both design and off-design conditions.

Unsurpassed Integrated Part Load Value

The Air-conditioning, Heating, and Refrigeration Institute (AHRI) Chiller Certification Program endorses the validity of off-design analysis to compare chiller energy consumption. Measured with AHRI's Integrated Part Load Value (IPLV), YK centrifugal chillers are unsurpassed in energy efficiency. Equipped with an OptiSpeed^{TV} variable-speed drive, they can reduce energy usage as low as 0.20 kW/TR at off-design conditions.

Adaptive capacity control optimizes performance

When a YORK YK chiller is equipped with an OptiSpeed drive, it incorporates advanced Adaptive Capacity Control logic, which continually optimizes chiller operation. It closely examines critical operating parameters, and then determines the most efficient way to operate. In addition, it lets you optimize your savings when using intelligent control strategies, such as chilled-water reset. Adaptive Capacity Control logic also accommodates the characteristics of the refrigerant used in the chiller – today and tomorrow. Take advantage of colder entering-condenser water Unlike competitive chillers which require entering condenser-water temperature (ECWT) from the cooling tower to be held artificially high, YORK YK centrifugal chillers can utilize ECWT as low as 55°F (13°C). The lower ECWT reduces the compressor workload, and that can reduce instantaneous energy consumption as much as 50%.

Powerful control center saves energy

YK chillers feature the OptiView^{**} Control Center, which uses microprocessor capabilities to save you energy. Operation at just 1° below the designed chilledwater-temperature setpoint can increase chiller energy consumption by as much as 3%, wasting thousands of kilowatt-hours and dollars each year. The digital precision of the OptiView Control Center lets you set chilled-water temperature to a resolution of ± 0.1°. As a result, you eliminate the energy wasted by drifting a degree or more from the setpoint. The OptiView Control Center can also be used to schedule daily operating hours and holidays. No longer is energy accidentally wasted cooling the facility when it's not needed.

The OptiView Control Center helps you operate your YORK YK chiller more efficiently by allowing for the precise setting of chilled-water temperature and operating schedule.

3

Maximum control with OptiView[™] Control Center

Easy to operate

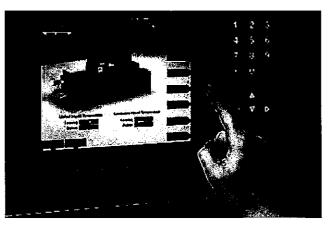

The intuitive, full-color OptiView Control Center offers you a higher level of monitoring and control. Data input is foolproof, and data outputs are shown in association with illustrations of the appropriate chiller components. For convenience, all data can be displayed in eleven different languages, in addition to Imperial or SI units.

Easy to monitor

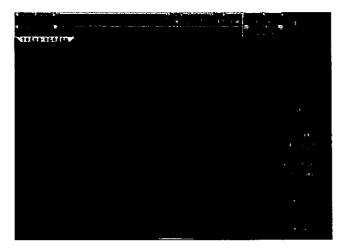

The OptiView Control Center allows on-board trending of up to six different values, selected from over 100 variables. The values and sampling interval are all user-selectable. This flexibility allows you to select parameters that are critical for your operation and to perform trending without a BAS interface and separate monitor.

Easy to integrate

Energy savings and ease-of-use can be fully realized when the HVAC system is an integrated part of the building-automation system. The OptiView Control Center is designed to communicate with the Johnson Controls Metasys[®] system. It can also communicate with most control systems on the market today using its optional ELink communication card.

Data outputs on the OptiView Control Center are accompanied with an illustration of the appropriate chiller component, making chiller operation more intuitive.

The trending screen provided performance insights not possible with snap shot observations.

Versatile design provides superior sustainability and flexibility

Environmental responsibility

The environmental impact of your chiller can be significant. You can reduce your impact by specifying YORK YK chillers. You'll get the benefit of refrigerant HFC-134a, which has zero ozone depletion potential (ODP). Plus, the high efficiency of the chillers reduces the indirect global warming potential (GWP), which is 98% of the total impact, caused by greenhouse-gas emissions produced by your utility to power the chiller. In addition, because of the chillers' high efficiency, your building could earn points for the Optimize Energy Performance (EAc1) credit in the Leadership in Energy and Environmental Design® (LEED) program.

Falling-film technology, utilized in the evaporator of YK chillers, reduces the refrigerant charge by up to 40%. It is available in YK chillers up to about 1,000 TR (based on conditions), and will help your building to qualify for maximum LEED points for Enhanced Refrigerant Management (EAc4).

Reduced noise levels

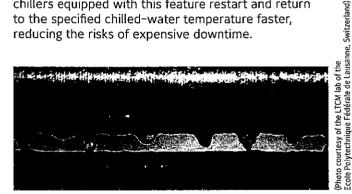

Traditional centrifugal chillers can generate a substantial amount of objectionable noise, but the YORK YK chiller is equipped with the innovative OptiSound[™] Control, which reduces noise at off-design conditions. The control continuously monitors the characteristics of the compressordischarge gas and optimizes the diffuser spacing of the compressor to minimize noisy gas-flow disruptions from the impeller. Chiller operation is also stabilized.

Flexible heating option

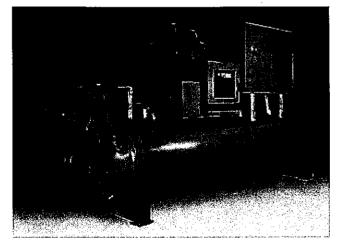

The YORK YK chiller can also be configured as a heatrecovery chiller, for use in facilities with simultaneous heating and cooling requirements. The heat-recovery unit takes advantage of the free heat that is typically rejected by the cooling towers. The heat can be used to control humidity, reheat the air, and preheat domestic hot water. Heat-recovery units have outstanding heating coefficients of performance that can reach up to 11.4.

Quick restart and return to setpoint

The Quick Start feature available on the YORK YK chiller reduces the risks that temperature-sensitive facilities experience after a power interruption. YK chillers equipped with this feature restart and return to the specified chilled-water temperature faster, reducing the risks of expensive downtime.

A falling-film evaporator is more efficient because refrigerant is sprayed over the tubes, reducing refrigerant charge up to 40%.

The YK chiller is available in a heat-recovery configuration. Recovered heat can be used in the HVAC or domestic hot-water systems.

5

Maximum reliability with minimum maintenance

OptiView Control Center keeps you well-informed The OptiView Control Center provides complete information on your chiller's operating condition. Safety-shutdown information includes day, time, cause of shutdown and type of restart required. Color-coding of fault messages allows easy determination of chiller status. Yellow messages signify shutdowns with automatic restart, requiring no operator intervention. Red messages are displayed for shutdowns requiring manual restart, alerting the operator that a system check may be required.

The Trending Screen can show changes in motor current, oil temperature and pressure, refrigerant pressures, or water temperatures, all of which can be valuable indicators of developing problems. This capability gives you ample time to take corrective measures before any expensive downtime is incurred. With the OptiView Control Center, you can see when to schedule routine maintenance in advance of actual need.

Open drive is easy to maintain

The YORK YK centrifugal chiller uses an open-motor driveline, which means less downtime. If a motor failure occurs, the chiller can be brought back online much faster and at a reduced cost. The motor is easy to remove, and can be repaired at a local motor shop. As a result, downtime due to motor failure is dramatically reduced.

Electrical protection extends motor life

Equipped with an OptiSpeed drive, the YK chiller starts "softly," never letting the inrush current exceed 100% of the full-load amps. By limiting the inrush, the motor windings do not rub together with expansion, which results in longer motor life and less chiller downtime. Lower inrush also reduces torque stresses on the motor and compressor driveline.

:

Start maximizing today

For more information on how YORK YK chillers can deliver real-world energy performance, visit johnsoncontrols.com or contact your Johnson Controls representative.

Color-coded fault messages allow early determination of chiller status and required operator action.

WARNING

;

HIGH VOLTAGE is used in the operation of this equipment DEATH OR SERIOUS INJURY may result if personnel fail to observe precautions.

Work on electronic equipment should not be undertaken unless the individual(s) has (have) been trained

in the proper maintenance of the equipment and is (are) familiar with its potential hazards.

Shut off power supply to equipment before beginning work and follow lockout procedures. When working inside equipment with power off, take special care to discharge every capacitor likely to hold dangerous potential.

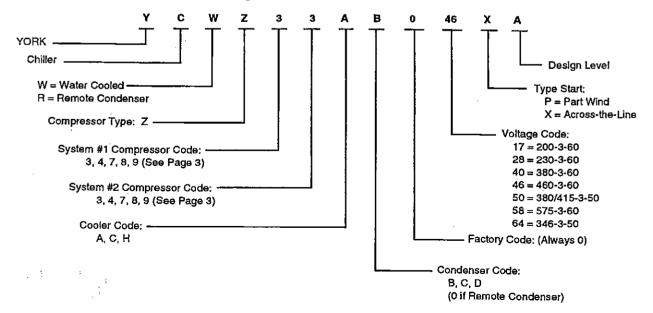

Be careful not to contact high voltage connections when installing or operating this equipment.

LOW VOLTAGE

DO NOT be misled by the term "low voltage". Voltages as low as 50 volts may cause death.

NOTES:

^s = Recommended Stock Spare Parts

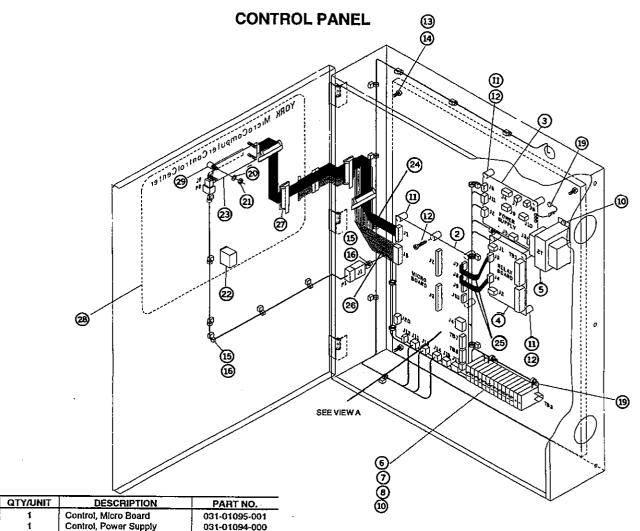

P = Part Winding

Part Winding (Start) compressors require two (2) contactors per compressor (system).

A = Across-the-Line

Across-the-Line (Start) compressors require one (1) contactor per compressor (system). Contactors include suppressors.

NOTES (For Pages 12 - 13);

- One required per compressor
 Not Applicable
- N.A. Not Available
- Parts listed on pages 12 and 13 are for single replacement parts contained in the Option Kits. Part Numbers provided **DO NOT** reflect part numbers for complete Option Kits. See the Installation Operation Manual, Form 150.55-NM3 for complete Option Kit Part Numbers.
- 2. All other parts for this option are the same as standard, including cooler, controls, and unit components.
- 3. This option also requires Relay Board Kit, Item I, and Discharge Pressure Readout Kit, Items J and K.
- 4. Loadminder Option also requires Relay Board Kit, Item E.
- 5. Used with Remote Control Center (if Specified).

Ohio Mercantile Self Direct Program

Application Guide & Cover Sheet

Questions? Call 1-866-380-9580 or visit www.duke-energy.com.

Email this form along with <u>completed Mercantile Self Direct Prescriptive or Custom applications</u>, proof of payment, energy savings calculations and spec sheets to <u>SelfDirect@Duke-Energy.com</u>. You may also fax to 1-513-629-5572.

Mercantile customers, defined as using at least 700,000 kWh annually or having an account in multiple locations are eligible for the Mercantile Self Direct program. Indicate which applies:

- a single Duke Energy Ohio account with 700,000 kWh annual usage
- an account with multiple locations

Please list Duke Energy account numbers below (attach listing of multiple accounts and/or billing history for other utilities as required):

Account Number	Annual Usage	Account Number	Annual Usage
6930-2121-01-0	38,000,000		
. . .			

Self Direct rebates are available for completed Custom projects that have not previously received a Duke Energy Smart \$aver® Custom Incentive. Self Direct rebates are applicable to Prescriptive measures that were installed more than 90 days prior to submission to Duke Energy and have not previously received a Duke Energy Prescriptive rebate.

Self Direct Program rules allow for, though do not require, certain projects that are Prescriptive in nature under the Smart \$aver program to be evaluated using the Custom process in the Self Direct program. Use the list on page two as a guide to determine which Self Direct program best fits your project(s). Apply for Self Direct projects using the appropriate application forms in conjunction with this cover sheet.

Self Direct Program rules also allow for behaviorally based and/or no cost and low cost projects to receive rebates.

Please check each box to indicate completion/inclusion of the following program requirements:

All sections of	Proof of payment.*	Manufacturer's Spec	Energy
appropriate		sheets	model/calculations and
application(s) are		316613	
			detailed inputs for
completed			Custom applications

*If a single payment record is intended to demonstrate the costs of both Prescriptive & Custom projects, please include an additional document with an estimated breakout of costs for each Prescriptive and Custom energy conservation measure.

**Behavioral energy efficiency and demand reduction projects must be both measurable and verifiable. Provide justification with your application. Rebates for such projects may be small in magnitude.

2/18

;

Application Type	Prescriptive Measures with Optiona	I Custom Processing
Heating & Cooling and Window Films, Programmable Thermostats, &	Energy Star Window/Sleeve/Room AC	Air Source Heat Pump Water Heater
Guest Room Energy Management Systems	Setback/Programmable Thermostat Guestroom Energy Management Control	U Window Film
Chillers & Thermal Storage	Air Cooled Chiller	Water Cooled Chiller
Motors, Pumps and Variable Frequency Drives (VFDs)	VFD – Applied to Process Pump VFD – Applied to HVAC Pump	└ VFD applied to HVAC Fan
Food Service	 ENERGY STAR Hot Food Holding Cabinet Night Covers for Display ECM Cooler, Freezer, and Display Case Motors ENERGY STAR Solid or Glass Door Reach-in Freezer of 	Anti-Sweat Heater Control Cooking Equipment ENERGY STAR ICE MACHINE Refrigerator
Process Equipment	Engineered Nozzle – COMPRESSED AIR Air compressor equipped with VFD	Pellet Dryer Duct Insulation
Chiller Tune-ups	Air cooled chiller tune-up	X Water cooled chiller tune-up

Please indicate above any Prescriptive energy conservation measures to be evaluated through the Custom process. Only Prescriptive measures listed above are eligible for this option. To receive a Self Direct Custom rebate, a detailed analysis of pre-project and post-project energy usage and project costs must be included in the application.

Although some Self Direct Prescriptive measures are eligible for evaluation through Custom processes, such an approach may not be most effective for certain measures.

Rebates are subject to change and may be discontinued at the sole discretion of Duke Energy. Equipment must be installed and operable to be eligible for rebates. As Federal Energy Policy Law changes, equipment efficiency requirements are subject to change.

;

Manufacturer and Model #	# of Units	Tons Per unit*	Total Project Cost	Current Service Date	Previous Service Date	Total Rebate
York YK S2 S2 J2 DH AS	5	2000	\$6,804.00	02/18/2013	02/10/2012	\$3,402.00

*Provide manufacturer's spec sheet documenting the size of the unit

To Calculate your tunc-up relation e	
A. Add up equipment capacity of all units serviced (in tons) and multiply by \$2/ton =	\$20,000.00
B. Cost of service = \$6,804.00 x 50% of total service cost =	\$3,402.00
Total Rebate (lesser amount of row A or row B)≕	3402
*Rebates cannot exceed 50% of total service invoice (external labor and equipment).	·

Service Requirements:

- 1. This rebate is available only once per unit in a 12 month period.
- 2. An individual chiller is considered one unit.
- 3. Copy of paid invoice must be included with this application
- 4. Self serviced (internal) labor should not be included as part of the total service cost. Only external labor will be considered as part of the total service invoice.
- 5. Cooling service must include the following normal maintenance items (please check if completed):

	🛛 Compressor amp draw	Low Pressure controls
System Pressure check and adjust	Supply motor amp draw	High Pressure controls
Filter inspect or replace	Condenser fan(s) amp draw	Crankcase heater operation
Belt inspect or replace	Liquid line temperature	Water cooled chiller condenser tube cleaning
☑ Contactors condition	Suction pressure & temperature	Water cooled chiller evaporator tube cleaning
Evaporator condition	Oil level & pressure	

Rebate Eligibility

- · Rebates are only available to customers on Duke Energy Ohio non-residential rate.
- Duke Energy Customers who purchase electric generation from an alternative supplier are eligible to participate.
- Rebate will not be paid until eligible equipment has been installed, is available to operate, and verification has been completed by Duke Energy staff as noted in the Term & Conditions stated below.
- Duke Energy reserves the right to revise rebate levels and/or qualifying efficiency levels at anytime.
- Customer may assign the rebate to the vendor who installed/supplied the equipment. The customer's signature is required in the
 appropriate places on this form to assign the rebate to the vendor. Customer agrees that such an action constitutes an irrevocable
 assignment of the rebate. This assigned rebate must reduce the purchase price paid for the equipment by an equivalent amount.
- · Any equipment which, either separately or as part of a project, has or will receive a rebate from any other Duke Energy program
- In no case will Duke Energy pay a rebate above the actual cost of the service.
- · Rebate recipient assumes all responsibilities for any tax consequences resulting from Duke Energy rebate payment.
- To qualify for Duke Energy rebates, applicants who provide their social security number as their federal tax identification number for tax purposes must sign and return the "Customer consent to release personal information" form ("Consent Form") along with the application. Rebate applications are processed by a 3rd party vendor. The 3rd party vendor is responsible for mailing the 1099 form at the end of the calendar year for tax filing. Duke Energy and the 3rd party vendor have signed a confidentiality agreement to protect your personal information. If your social security number is your federal tax ID number and you elect not to sign the Consent Form, please do not send Duke Energy the application, as you will not be qualified to participate in the rebate program.

(Rev. December 2011)

1	List account number(s) here (optional)	
	Customer #'s 2559, 3524	
Par	t I Taxpayer Identification Number (TIN)	······································
to avo reside entitie	your TIN in the appropriate box. The TIN provided must match the name given on the "Name" id backup withholding. For individuals, this is your social security number (SSN). However, fo nt alien, sole proprietor, or disregarded entity, see the Part I instructions on page 3. For other s, it is your employer identification number (EIN). If you do not have a number, see <i>How to ge</i> page 3.	
Note.	If the account is in more than one name, see the chart on page 4 for guidelines on whose er to enter.	Employer identification number
Part	II Certification	

Under penalties of perjury, I certify that:

1. The number shown on this form is my correct taxpayer identification number (or I am waiting for a number to be issued to me), and

2. I am not subject to backup withholding because: (a) I am exempt from backup withholding, or (b) I have not been notified by the Internal Revenue Service (IRS) that I am subject to backup withholding as a result of a failure to report all interest or dividends, or (c) the IRS has notified me that I am no longer subject to backup withholding, and

3. I am a U.S. citizen or other U.S. person (defined below).

Certification instructions. You must cross out item 2 above if you have been notified by the IRS that you are currently subject to backup withholding because you have failed to report all interest and dividends on your tax return. For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and generally, payments other than interest and dividends, you are not required to sign the certification, but you must provide your correct TIN. See the instructions on page 4.

Sign Signature of Here U.S. person ►

General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

Purpose of Form

A person who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) to report, for example, income paid to you, real estate transactions, mortgage interest you paid, acquisition or abandonment of secured property, cancellation of debt, or contributions you made to an IRA.

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN to the person requesting it (the requester) and, when applicable, to:

1. Certify that the TIN you are giving is correct (or you are waiting for a number to be issued),

2. Certify that you are not subject to backup withholding, or

3. Claim exemption from backup withholding if you are a U.S. exempt payee. If applicable, you are also certifying that as a U.S. person, your allocable share of any partnership income from a U.S. trade or business is not subject to the withholding tax on foreign partners' share of effectively connected income. Date 🕨

Note. If a requester gives you a form other than Form W-9 to request your TIN, you must use the requester's form if it is substantially similar to this Form W-9.

Definition of a U.S. person. For federal tax purposes, you are considered a U.S. person if you are:

An individual who is a U.S. citizen or U.S. resident alien,

;

- A partnership, corporation, company, or association created or
- organized in the United States or under the laws of the United States,
- An estate (other than a foreign estate), or
- A domestic trust (as defined in Regulations section 301.7701-7).

Special rules for partnerships. Partnerships that conduct a trade or business in the United States are generally required to pay a withholding tax on any foreign partners' share of income from such business. Further, in certain cases where a Form W-9 has not been received, a partnership is required to presume that a partner is a foreign person, and pay the withholding tax. Therefore, if you are a U.S. person that is a partner in a partnership conducting a trade or business in the United States, provide Form W-9 to the partnership to establish your U.S. status and avoid withholding on your share of partnership income. 698-6547

YORK[®] Water-Cooled Chillers

18

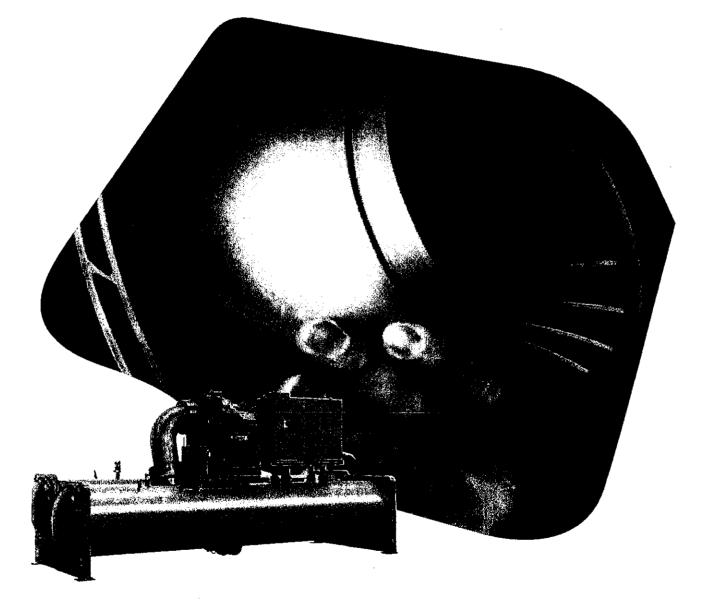

12/

(All chillers are electric-drive and use refrigerant HFC-134a unless otherwise noted *) CAPACITY MODEL and DESCRIPTION 215 - 380 TR Model YMC² - magnetic centrifugal compressor 755 - 1340 kW Unique Features: 30% less refrigerant, 73 dBA, OptiView™ control panel, OptiSound™ control, OptiSpeed™ variable-speed drive Ideal Applications: comfort cooling, facilities requiring low sound levels, green / LEED® buildings 250 - 3000 TR Model YK - centrifugal compressor 880 -/10,550 kW Unique Features: OptiSpeed[™] variable-speed drive, heat-recovery capability, quick start feature, OptiSound[™] control, OptiView[™] control panel Ideal Applications: comfort cooling, heat-recovery sites, data centers 2500 - 3500 TR Model YK-EP - centrifugal compressors with economizer 8800 - 12,000 kW Unique Features: higher efficiency at design and off-design conditions. OptiSpeed[™] variable-speed drive, single control panel Ideal Applications: district cooling, process / industrial cooling, data centers, turbine inlet-air cooling 1500 - 6000 TR Model YD - dual centrifugal compressors 5300 - 21,100 kW Unique Features: smallest footprint per cooling ton in the industry, single OptiView[™] control panel Ideal Applications: district cooling, retrofits, building additions 300 - 2500 TR Model CYK - compound centrifugal compressors 1050 - 8800 kW Unique Features: high-head and heat-pump capability Ideal Applications: air-cooled condensing, brine chilling, heat pump, and process / industrial cooling 700 - 2800 TR Model YST - steam-turbine-drive centrifugal compressor * 2460 ~ 9850 kW Unique Features: packaged steam condenser, automatic start-up, OptiView[™] control panel Ideal Applications: co-generation, hybrid plants 3000 - 5500 TR Titan Model OM - centrifugal compressor with 10,550 - 19,350 kW electric-motor, steam-turbine, or gas-engine drive * Unique Features: flexibility, longest life expectancy, easily retrofitted Ideal Applications: district cooling, air-cooled condensing, brine chilling, heat pump, and process / industrial cooling

Johnson Controls

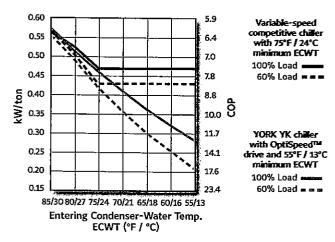

YORK' MODEL YK CENTRIFUGAL CHILLERS

Best route to real-world energy performance

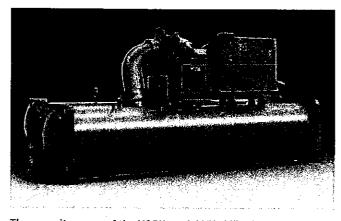

YORK[®] YK chillers deliver maximum efficiency

YORK YK chillers can utilize ECWTs as low as 55°F (13°C) to reach 0.20 kW/ton (18 COP) at off-design conditions, reducing instantaneous energy consumption by as much as 50%.

The capacity range of the YORK model YK chiller is 250 to 3,000 TR (880 to 10,540 kW). Both low-voltage (250 to 575 V) and medium-voltage (2,300 to 13.800 V) designs are available.

Real-world energy performance is essential

YORK[®] model YK centrifugal chillers, manufactured by Johnson Controls, provide the best route to real-world energy performance – the combined performance at all operating conditions, not just design. Because chillers in the real world operate nearly 99% of the time at off-design conditions, off-design performance is the major factor in energy consumption. That's why YK centrifugal chillers are engineered for maximum efficiency at both design and off-design conditions.

Unsurpassed Integrated Part Load Value

The Air-conditioning, Heating, and Refrigeration Institute (AHRI) Chiller Certification Program endorses the validity of off-design analysis to compare chiller energy consumption. Measured with AHRI's Integrated Part Load Value (IPLV), YK centrifugal chillers are unsurpassed in energy efficiency. Equipped with an OptiSpeed[™] variable-speed drive, they can reduce energy usage as low as 0.20 kW/TR at off-design conditions.

Adaptive capacity control optimizes performance

When a YORK YK chiller is equipped with an OptiSpeed drive, it incorporates advanced Adaptive Capacity Control logic, which continually optimizes chiller operation. It closely examines critical operating parameters, and then determines the most efficient way to operate. In addition, it lets you optimize your savings when using intelligent control strategies, such as chilled-water reset. Adaptive Capacity Control logic also accommodates the characteristics of the refrigerant used in the chiller --- today and tomorrow. Take advantage of colder entering-condenser water Unlike competitive chillers which require entering condenser-water temperature (ECWT) from the cooling tower to be held artificially high, YORK YK centrifugal chillers can utilize ECWT as low as 55°F (13°C). The lower ECWT reduces the compressor workload, and that can reduce instantaneous energy consumption as much as 50%.

Powerful control center saves energy

1

YK chillers feature the OptiView[™] Control Center, which uses microprocessor capabilities to save you energy. Operation at just 1° below the designed chilledwater-temperature setpoint can increase chiller energy consumption by as much as 3%, wasting thousands of kilowatt-hours and dollars each year. The digital precision of the OptiView Control Center lets you set chilled-water temperature to a resolution of ± 0.1°. As a result, you eliminate the energy wasted by drifting a degree or more from the setpoint. The OptiView Control Center can also be used to schedule daily operating hours and holidays. No longer is energy accidentally wasted cooling the facility when it's not needed.

The OptiView Control Center helps you operate your YORK YK chiller more efficiently by allowing for the precise setting of chilled-water temperature and operating schedule.

Maximum control with OptiView[™] Control Center

Easy to operate

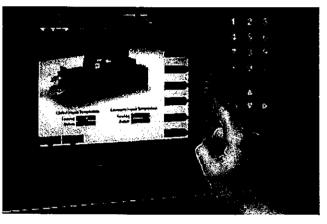

The intuitive, full-color OptiView Control Center offers you a higher level of monitoring and control. Data input is foolproof, and data outputs are shown in association with illustrations of the appropriate chiller components. For convenience, all data can be displayed in eleven different languages, in addition to Imperial or SI units.

Easy to monitor

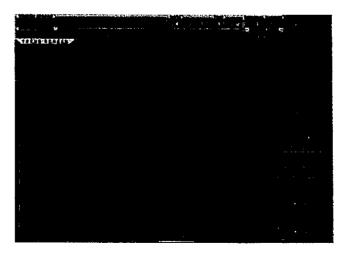

The OptiView Control Center allows on-board trending of up to six different values, selected from over 100 variables. The values and sampling interval are all user-selectable. This flexibility allows you to select parameters that are critical for your operation and to perform trending without a BAS interface and separate monitor.

Easy to integrate

Energy savings and ease-of-use can be fully realized when the HVAC system is an integrated part of the building-automation system. The OptiView Control Center is designed to communicate with the Johnson Controls Metasys[®] system. It can also communicate with most control systems on the market today using its optional ELink communication card.

The trending screen provided performance insights not possible with snap shot observations.

Versatile design provides superior sustainability and flexibility

Environmental responsibility

The environmental impact of your chiller can be significant. You can reduce your impact by specifying YORK YK chillers. You'll get the benefit of refrigerant HFC-134a, which has zero ozone depletion potential (ODP). Plus, the high efficiency of the chillers reduces the indirect global warming potential (GWP), which is 98% of the total impact, caused by greenhouse-gas emissions produced by your utility to power the chiller. In addition, because of the chillers' high efficiency, your building could earn points for the Optimize Energy Performance (EAc1) credit in the Leadership in Energy and Environmental Design® (LEED) program.

Falling-film technology, utilized in the evaporator of YK chillers, reduces the refrigerant charge by up to 40%. It is available in YK chillers up to about 1,000 TR (based on conditions), and will help your building to qualify for maximum LEED points for Enhanced Refrigerant Management (EAc4).

Reduced noise levels

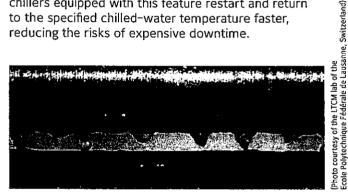

Traditional centrifugal chillers can generate a substantial amount of objectionable noise, but the YORK YK chiller is equipped with the innovative OptiSound[™] Control, which reduces noise at off-design conditions. The control continuously monitors the characteristics of the compressordischarge gas and optimizes the diffuser spacing of the compressor to minimize noisy gas-flow disruptions from the impeller. Chiller operation is also stabilized.

Flexible heating option

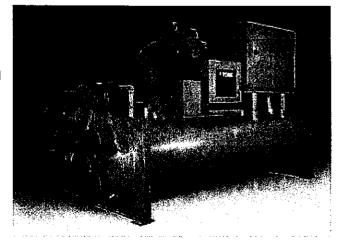

The YORK YK chiller can also be configured as a heatrecovery chiller, for use in facilities with simultaneous heating and cooling requirements. The heat-recovery unit takes advantage of the free heat that is typically rejected by the cooling towers. The heat can be used to control humidity, reheat the air, and preheat domestic hot water. Heat-recovery units have outstanding heating coefficients of performance that can reach up to 11.4.

Quick restart and return to setpoint

The Quick Start feature available on the YORK YK chiller reduces the risks that temperature-sensitive facilities experience after a power interruption. YK chillers equipped with this feature restart and return to the specified chilled-water temperature faster, reducing the risks of expensive downtime.

A falling-film evaporator is more efficient because refrigerant is sprayed over the tubes, reducing refrigerant charge up to 40%.

The YK chiller is available in a heat-recovery configuration. Recovered heat can be used in the HVAC or domestic hot-water systems.

Maximum reliability with minimum maintenance

OptiView Control Center keeps you well-informed

The OptiView Control Center provides complete information on your chiller's operating condition. Safety-shutdown information includes day, time, cause of shutdown and type of restart required. Color-coding of fault messages allows easy determination of chiller status. Yellow messages signify shutdowns with automatic restart, requiring no operator intervention. Red messages are displayed for shutdowns requiring manual restart, alerting the operator that a system check may be required.

The Trending Screen can show changes in motor current, oil temperature and pressure, refrigerant pressures, or water temperatures, all of which can be valuable indicators of developing problems. This capability gives you ample time to take corrective measures before any expensive downtime is incurred. With the OptiView Control Center, you can see when to schedule routine maintenance in advance of actual need.

Open drive is easy to maintain

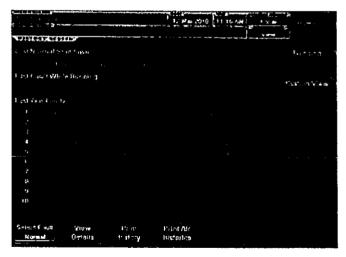

The YORK YK centrifugal chiller uses an open-motor driveline, which means less downtime. If a motor failure occurs, the chiller can be brought back online much faster and at a reduced cost. The motor is easy to remove, and can be repaired at a local motor shop. As a result, downtime due to motor failure is dramatically reduced.

Electrical protection extends motor life

Equipped with an OptiSpeed drive, the YK chiller starts "softly," never letting the inrush current exceed 100% of the full-load amps. By limiting the inrush, the motor windings do not rub together with expansion, which results in longer motor life and less chiller downtime. Lower inrush also reduces torque stresses on the motor and compressor driveline.

Start maximizing today

For more information on how YORK YK chillers can deliver real-world energy performance, visit johnsoncontrols.com or contact your Johnson Controls representative.

Color-coded fault messages allow early determination of chiller status and required operator action.

Ohio Mercantile Self Direct Program

Application Guide & Cover Sheet

Questions? Call 1-866-380-9580 or visit www.duke-energy.com.

Email this form along with <u>completed Mercantile Self Direct Prescriptive or Custom applications</u>, proof of payment, energy savings calculations and spec sheets to <u>SelfDirect@Duke-Energy.com</u>. You may also fax to 1-513-629-5572.

Mercantile customers, defined as using at least 700,000 kWh annually or having an account in multiple locations are eligible for the Mercantile Self Direct program. Indicate which applies:

a single Duke Energy Ohio account with 700,000 kWh annual usage

an account with multiple locations

Please list Duke Energy account numbers below (attach listing of multiple accounts and/or billing history for other utilities as required):

Account Number	Annual Usage	Account Number	Annual Usage
0040-2121-01-7	24,000,000		

Self Direct rebates are available for completed Custom projects that have not previously received a Duke Energy Smart \$aver® Custom Incentive. Self Direct rebates are applicable to Prescriptive measures that were installed more than 90 days prior to submission to Duke Energy and have not previously received a Duke Energy Prescriptive rebate.

Self Direct Program rules allow for, though do not require, certain projects that are Prescriptive in nature under the Smart \$aver program to be evaluated using the Custom process in the Self Direct program. Use the list on page two as a guide to determine which Self Direct program best fits your project(s). Apply for Self Direct projects using the appropriate application forms in conjunction with this cover sheet.

Self Direct Program rules also allow for behaviorally based and/or no cost and low cost projects to receive rebates.

Please check each box to indicate completion/inclusion of the following program requirements:

All sections of	Proof of payment.*	🛛 Manufacturer's Spec	Energy
appropriate		sheets	model/calculations and
application(s) are			detailed inputs for
completed			Custom applications

*If a single payment record is intended to demonstrate the costs of both Prescriptive & Custom projects, please include an additional document with an estimated breakout of costs for each Prescriptive and Custom energy conservation measure.

**Behavioral energy efficiency and demand reduction projects must be both measurable and verifiable. Provide justification with your application. Rebates for such projects may be small in magnitude.

Rebates are subject to change and may be discontinued at the sole discretion of Duke Energy. Equipment must be installed and operable to be eligible for rebates. As Federal Energy Policy Law changes, equipment efficiency requirements are subject to change.

;

Air Cooled and Water Cooled Chil Manufacturer and Model #	# of Units	Tons Per unit*	Total Project Cost	Current Service Date	Previous Service Date	Total Rebate
YKSDRCJ4-DHCS	2	2000	\$2,666.00	12/30/2013	04/16/2012	\$1,333.00
YK P1 Q2 H2-DB AS	1	1200	\$1,342.00	12/27/2013	02/29/2012	\$671.00
Carrier 30HK-040-D-611	2	40	\$3,240.00	12/16/2013	04/27/2012	\$1620

*Provide manufacturer's spec sheet documenting the size of the unit

To Calculate your tune; up rebate;	
A. Add up equipment capacity of all units serviced (in tons) and multiply by \$2/ton =	
B. Cost of service = \$7,248.00 x 50% of total service cost =	\$3,624.00
Total Rebate (lesser amount of row A or row B)=	\$3624
*Rebates cannot exceed 50% of total service invoice (external labor and equipment)	

ates cannot exceed 50% of total service invoice (external labor and equipment).

Service Requirements:

- 1. This rebate is available only once per unit in a 12 month period.
- 2. An individual chiller is considered one unit.
- 3. Copy of paid invoice must be included with this application
- Self serviced (internal) labor should not be included as part of the total service cost. Only external labor will be considered as part 4. of the total service invoice.
- 5. Cooling service must include the following normal maintenance items (please check if completed):

Air cooled condenser coil cleaning	Compressor amp draw	Low Pressure controls
System Pressure check and adjust	Supply motor amp draw	High Pressure controls
Filter inspect or replace	Condenser fan(s) amp draw	Crankcase heater operation
Belt inspect or replace	🛛 🖾 Liquid line temperature	Water cooled chiller condenser tube cleaning
Contactors condition	Suction pressure & temperature	Water cooled chiller evaporator tube cleaning
Evaporator condition	Oil level & pressure	

Rebate Eligibility

- Rebates are only available to customers on Duke Energy Ohio non-residential rate. .
- Duke Energy Customers who purchase electric generation from an alternative supplier are eligible to participate.
- Rebate will not be paid until eligible equipment has been installed, is available to operate, and verification has been completed by Duke Energy staff as noted in the Term & Conditions stated below.
- Duke Energy reserves the right to revise rebate levels and/or qualifying efficiency levels at anytime.
- Customer may assign the rebate to the vendor who installed/supplied the equipment. The customer's signature is required in the appropriate places on this form to assign the rebate to the vendor. Customer agrees that such an action constitutes an irrevocable assignment of the rebate. This assigned rebate must reduce the purchase price paid for the equipment by an equivalent amount.
- Any equipment which, either separately or as part of a project, has or will receive a rebate from any other Duke Energy program
- In no case will Duke Energy pay a rebate above the actual cost of the service.
- Rebate recipient assumes all responsibilities for any tax consequences resulting from Duke Energy rebate payment.
- To qualify for Duke Energy rebates, applicants who provide their social security number as their federal tax identification number for tax purposes must sign and return the "Customer consent to release personal information" form ("Consent Form") along with the application. Rebate applications are processed by a 3rd party vendor. The 3rd party vendor is responsible for mailing the 1099 form at the end of the calendar year for tax filing. Duke Energy and the 3rd party vendor have signed a confidentiality agreement to protect your personal information. If your social security number is your federal tax ID number and you elect not to sign the Consent Form, please do not send Duke Energy the application, as you will not be qualified to participate in the rebate program.

Request for Taxpayer Identification Number and Certification

Par	t I Taxpayer Identification Number (TIN)			•						
to avo reside entitie	your TIN in the appropriate box. The TIN provided must match the name given on the "Name" bid backup withholding. For individuals, this is your social security number (SSN). However, for ant alien, sole proprietor, or disregarded entity, see the Part I instructions on page 3. For other is, it is your employer identification number (EIN). If you do not have a number, see <i>How to get</i> in page 3.	a 🗌	ocial :	securit		ber	-	<u> </u>		
Note.	If the account is in more than one name, see the chart on page 4 for guidelines on whose	E	пріоу	er ider	tifica	tion nu	mbe	r		
numb	er to enter.	3	1	- [) 4	1	1	9 1	3 0	
Pari	t II Certification		.							

Under penalties of perjury, I certify that:

1. The number shown on this form is my correct taxpayer identification number (or I am waiting for a number to be issued to me), and

 I am not subject to backup withholding because: (a) I am exempt from backup withholding, or (b) I have not been notified by the Internal Revenue Service (IRS) that I am subject to backup withholding as a result of a failure to report all interest or dividends, or (c) the IRS has notified me that I am no longer subject to backup withholding, and

3. I am a U.S. citizen or other U.S. person (defined below).

Certification instructions. You must cross out item 2 above if you have been notified by the IRS that you are currently subject to backup withholding because you have failed to report all interest and dividends on your tax return. For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and generally, payments other than interest and dividends, you are not required to sign the certification, but you must provide your correct TIN. See the instructions on page 4.

Sign Signature of U.S. person ►

General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

Purpose of Form

A person who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) to report, for example, income paid to you, real estate transactions, mortgage interest you paid, acquisition or abandonment of secured property, cancellation of debt, or contributions you made to an IRA.

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN to the person requesting it (the requester) and, when applicable, to:

 Certify that the TIN you are giving is correct (or you are waiting for a number to be issued),

2. Certify that you are not subject to backup withholding, or

3. Claim exemption from backup withholding if you are a U.S. exempt payee. If applicable, you are also certifying that as a U.S. person, your allocable share of any partnership income from a U.S. trade or business is not subject to the withholding tax on foreign partners' share of effectively connected income. Date 🕨

Note. If a requester gives you a form other than Form W-9 to request your TIN, you must use the requester's form if it is substantially similar to this Form W-9.

Definition of a U.S. person. For federal tax purposes, you are considered a U.S. person if you are:

An individual who is a U.S. citizen or U.S. resident alien,

;

- A partnership, corporation, company, or association created or
- organized in the United States or under the laws of the United States,
- An estate (other than a foreign estate), or
- A domestic trust (as defined in Regulations section 301.7701-7).

Special rules for partnerships. Partnerships that conduct a trade or business in the United States are generally required to pay a withholding tax on any foreign partners' share of income from such business. Further, in certain cases where a Form W-9 has not been received, a partnership is required to presume that a partner is a foreign person, and pay the withholding tax. Therefore, if you are a U.S. person that is a partner in a partnership conducting a trade or business in the United States, provide Form W-9 to the partnership to establish your U.S. status and avoid withholding on your share of partnership in come.

HVAC Guide Specifications Water-Cooled and Condenserless Reciprocating Chillers

Size Range:

15 to 60 Tons (53 to 210 kW)

Carrier Model Number:

30HW018-040 30HK040-060 30HL050,060

Part 1 — General

1.01 SYSTEM DESCRIPTION

Microprocessor controlled water-cooled (HWB,HWC, HWS,HK) or condenserless (HWA,HL) liquid chiller utilizing serviceable, semi-hermetic type compressor.

1.02 QUALITY ASSURANCE

- A. The 30HWB,HWC,HK 60-Hz unit performance shall be rated per ARI (U.S.A.) Standard 550/590-98 at standard rating conditions. All other unit performance shall be based on ARI Standard 550/590-98.
- B. Unit construction shall comply with ANSI/ASHRAE 15, latest revision Safety Standard, NEC, and applicable ASME codes (U.S.A. codes).
- C. Unit shall be certified in accordance with ISO 9002 manufacturing quality standard.
- D. Unit shall be UL listed and UL, Canada certified (30HWA, HWB, HWC, HK 60-Hz units only) (U.S.A. standards).

1.03 DELIVERY, STORAGE AND HANDLING

Unit shall be shipped factory-assembled with all piping and wiring, precharged with a complete operating charge (30HWB,HWC,HWS,HK) or a holding charge (30HWA,HL) of R-22 and shall be stored and handled according to manufacturer's recommendations.

Part 2 — Products

2.01 EQUIPMENT

A. General:

Single-piece liquid chiller consisting of compressor(s), direct expansion cooler, condenser(s) (30HWB,HWC,HWS,HK), controls, safeties, and any hardware required before start-up.

- B. Unit Cabinet:
 - 1. Frame shall be of heavy-gage galvanized steel with an electrostatically applied baked enamel finish.
 - The 30HW units shall pass through a standard 30-in. (762 mm) door and shall not exceed 36 in. (914 mm) in length (30HWA,B). The 30HK,HL units shall not exceed 36 in. (762 mm) in width.
- C. Compressor:

 $\neg j'$

- 1. Reciprocating, serviceable, semi-hermetic type only.
- 2. Equipped with an automatically reversible oil pump, operating oil charge, suction and discharge shutoff valves, oil sight glass, and a refrigerant suction gas-cooled motor.
- 3. Each shall be mounted on spring vibration isolators with an isolation efficiency of no less than 95%.
- 4. Each compressor shall have a crankcase heater, muffler, and suction cutoff unloaders.
- 5. Speed not to exceed 1750 rpm (29.2 r/s) for 60 Hz units, and 1450 rpm (24.2 r/s) for 50 Hz units.
- 6. Shall be same manufacturer as chiller.
- D. Cooler:
 - 1. 30HW: Single-pass ANSI type 316, stainless-steel, brazed-plate construction. 30HK,HL: Single-pass, shell-and-tube type with removeable heads and multiple internal polypropylene baffles. Seamless copper tubes shall be rolled into tube sheets.
 - 2. Direct expansion refrigerant circuit.
 - 3. Equipped with grooved-end-type fluid connections at least 8 in. (203 mm) above floor level.
 - 4. Insulated with 3/4-in. (19 mm) closed cell foam or equivalent.

5. Cooler shall be tested and stamped according to ASME code (U.S.A.) for working pressures of 430 psig (2965 kPa) on the refrigerant side for 30HW units and 235 psig (1620 kPa) for 30HK,HL units. Cooler shall have a maximum of 300 psig (2069 kPa) fluid-side working pressure for 30HW units and 150 psig (1034 kPa) for 30HK,HL units.

;

- E. Condenser (30HWC,30HK):
 - 1. Water-cooled shell-and-tube type with seamless, integrally-finned copper tubes and removable heads (2 condensers on 30HK units).
 - 2. Design and construction shall provide positive subcooling of liquid refrigerant.
 - 3. Each unit shall be equipped with a pressure relief device, purge cock, and liquid line shutoff valve.
 - 4. Condenser shall be tested and stamped in accordance with ASME code for refrigerant-side working pressure of 365 psig (2517 kPa) for 30HWC units and 385 psig (2655 kPa) for 30HK units. Condenser shall have a maximum water-side working pressure of 300 psig (2069 kPa) for 30HWC units and 250 psig (1724 kPa) for 30HK units.
- F. Condenser (30HWB):
 - 1. Single-pass, water-cooled, ANSI type 316, stainless-steel brazed-plate construction that shall provide positive subcooling of liquid refrigerant.
 - 2. Condensers shall be tested and stamped per ASME code for working pressures of 430 psig (2965 kPa) on the refrigerant side. Condenser shall have a maximum of 300 psig (2069 kPa) water-side working pressure.
 - 3. Equipped with grooved-end-type water connections at least 25 in. (635 mm) above floor level.
 - 4. Each condenser has a liquid line shutoff valve.
- G. Condenser (30HWS):
 - 1. Water-cooled shell-and-tube type with seamless, integrally-finned 90/10 cupro-nickel tubes and tube sheets with removable heads and zinc anodes.
 - 2. Design and construction shall provide positive subcooling of liquid refrigerant.
 - 3. Each unit shall be equipped with a pressure relief device, purge cock, and liquid line shutoff valve.
 - 4. Condenser shall be tested and stamped in accordance with ASME code for refrigerant-side working pressure of 365 psig (2517 kPa). Condenser shall have a maximum water-side working pressure of 300 psig (2069 kPa).
 - 5. Heads shall include replaceable zinc anodes for condenser corrosion protection.
- H. Refrigerant Components:

Each chiller shall contain the following: high side pressure relief device; liquid, suction, and discharge shutoff valves; sight glass; filter drier; thermostatic expansion valve; and charging valve.

- I. Controls and Safeties:
 - 1. Controls:
 - a. Unit controls shall include the following minimum components:
 - 1) Microprocessor.
 - 2) Power and control circuit terminal blocks.
 - 3) ON/OFF control switch.
 - Single set point dial (50 Hz unit) or Scrolling Marquee Display (60 Hz unit). NOTE: Scrolling Marquee Display shall be available as a factory-installed option for 50 Hz unit.
 - 5) Thermistor installed to measure saturated condensing temperature, cooler saturation temperature, compressor return gas temperature, and cooler entering and leaving fluid temperatures.
 - 6) Terminal block for temporary and/or permanent interface to the Carrier Comfort Network or similar building system control.
 - b. Unit controls shall be capable of performing the following functions:
 - 1) Automatic circuit lead/lag (30HK,HL only).
 - 2) Pumpout at beginning and end of every circuit cycle.
 - Capacity control based on leaving chilled fluid temperature and compensated by rate of change of return-fluid temperature.
 - 4) Limiting of the chilled fluid temperature pulldown rate at start-up to 1° F (.56° C) per minute to prevent excessive demand spikes (charges) at start-up.
 - 2. Safeties:

a. Unit shall be equipped with sensors and all necessary components in conjunction with the control system to provide the unit with the following protections:

;

- 1) Loss of refrigerant charge protection.
- 2) Low fluid flow detection.
- 3) Low chilled fluid temperature protection.
- 4) Low control voltage (to unit) protection.
- 5) High-pressure switch.
- b. Compressors shall be equipped with the following manual-reset type protections:
 - 1) Pressure overload.
 - 2) Electrical overload through the use of definite-purpose contactors and calibrated, ambient compensated, magnetic trip circuit breakers. Circuit breakers shall open all 3 phases in the event of an overload in any one phase (single-phasing condition).
- J. Operating Characteristics:
 - 1. Unit shall be capable of starting with up to 95 F (35 C) fluid temperature entering the cooler.
 - 2. Unit shall be capable of operating with variable cooler fluid flow.
- K. Electrical Requirements:
 - 1. Single-point electrical power connection with terminal block. Shall include power for control circuit.
 - 2. Control points shall be accessed through terminal block.
- L. Special Features:
 - 1. Oil Safety Switch (standard on HWA,HL, and brine units, field-installed accessory on HWB,HWC,HWS,HK standard units):
 - This switch senses differential oil pressure and prevents unit operation at low oil pressures. 2. Hot Gas Bypass:

This factory-installed option (30HW) or field-installed accessory (30HK,HL) shall permit chiller unloading capacity down to 10% of maximum loaded capacity.

3. Pressure Gage Panel:

This field-installed accessory shall include both suction and discharge pressure gages with shutoff valves.

- Sound Enclosure Panels: This acoustic package shall be either factory (30HW units only) or field installed and shall entirely enclose the compressor section to reduce radiated sound by approximately 5 dBA.
- Mobility Package (30HW units only): This package shall be either factory (30HWA,B only) or field installed and shall include 4 swivel wheels for easy unit mobility.
 - NOTE: The 30HWC,S units require 2 packages.
- 6. Vibration Isolators (30HW units only):

Vibration isolators shall be field installed before the unit is set into its final location and shall reduce vibration transmission through the mounting area of the chiller.

7. Multi-Chiller Control:

The multi-chiller control shall be field installed, and shall sequence up to 8 chillers in parallel. 8. Proof-of-Flow Switch:

This field-installed accessory shall sense fluid pressure differential across the chiller, and shall be compatible with the multi-chiller control accessory.

- Compressor Ground Fault Sensor: Ground-current sensing shall deenergize the compressor on sensing of a 2.5 ± 2 amps current imbalance from primary to ground to prevent formation of acids from motor burnout. It shall be a field-installed accessory.
- 10. Part-Wind Start (option on 30HW025-040; special order on HK040-060 and HL050,060): Part-wind start shall be factory installed to reduce compressor inrush current.
- Non-Fused Disconnect (30HW units only): The non-fused disconnect shall be factory installed and shall disconnect all power to the unit (including control circuit power).
- 12. Medium Temperature Brine (30HW units only): Special modifications shall be made at the factory to permit operation with leaving chilled fluid temperatures between 15 to 39 F (-9.4 to 3.9 C). NOTE: This is a special order for 30HK,HL units.
- 13. Condenser Manifold Package (HK only):

This field-installed accessory shall provide common fluid inlet and outlet connections.

- 14. Scrolling Marquee Display (standard on 60 Hz unit; available as a factory-installed option for 50 Hz unit):
 - a. Single leaving water temperature set point potentiometer.
 - b. The diagnostic display module shall be capable of indicating the safety lockout condition by displaying a code for which an explanation may be scrolled at the display. Information included for display shall be:

;

- 1) Compressor lockout.
- 2) Loss of charge.
- 3) Low fluid flow.
- 4) Low oil pressure.
- 5) Cooler freeze protection.
- 6) Thermistor malfunction.
- 7) Entering and leaving-fluid temperature.
- 8) All set points.
- 9) Time of day.
- c. Display module, in conjunction with the microprocessor, must also be capable of displaying the output (results) of a service test. Service test shall verify operation of every switch, thermistor, fan, and compressor before chiller is started.
- 15. Energy Management Module (EMM):
 - EMM shall be capable of:
 - a. Leaving temperature reset form space temperature, outdoor temperature, or 4 to 20 mA signal.
 - b. Demand limit or load shed via field supplied 4 to 20 mA signal or 2-step discrete contact closure.

DUKE ENERGY Mercantile Self Direct Program 139 East Fourth Street Cincinnati, OH 45202 З

Graves Quentin Proctor & Gamble 11510 Reed Hartman Hwy Blue Ash, OH 45241

Subject: Your Application for a Duke Energy Mercantile Self-Direct Rebate

Dear Mr. Quentin:

Thank you for your Duke Energy Mercantile Self Direct rebate application. As noted in the Energy Conservation Measure (ECM) chart on page two, a total rebate of \$8,466 has been proposed for your Chiller Tune Ups completed in the 2012 and 2013 calendar years. All Self Direct Rebates are contingent upon approval by the Public Utilities Commission of Ohio (PUCO).

At your earliest convenience, please indicate if you accept this rebate by

- providing your signature on page two
- completing the PUCO-required affidavit on page three.

Please return the documents to my attention via fax at 513-629-5572 or e-mail to SelfDirect@Duke-Energy.com. Upon receipt, Duke Energy will submit the necessary documentation to PUCO. Following PUCO's approval, Duke Energy will remit payment.

At Duke Energy, we value your business and look forward to working with you on this and future energy efficiency projects. We hope you will consider our Smart \$aver® incentives, when applicable. Please contact me if you have any questions.

Sincerely,

Megan Fox

Megan Fox Product Manager Mercantile Self Direct Rebates

cc: Mike Harp, Account Executive

Please indicate your response to this rebate offer within 30 days of receipt.

Rebate is accepted.

Rebate is declined.

By accepting this rebate, Proctor & Gamble affirms its intention to commit and integrate the energy efficiency projects listed on the following pages into Duke Energy's peak demand reduction, demand response and/or energy efficiency programs.

Additionally, Proctor & Gamble also agrees to serve as joint applicant in any future filings necessary to secure approval of this arrangement as required by PUCO and to comply with any information and reporting requirements imposed by rule or as part of that approval.

Finally, Proctor & Gamble affirms that all application information submitted to Duke Energy pursuant to this rebate offer is true and accurate. Information in question would include, but not be limited to, project scope, equipment specifications, equipment operational details, project costs, project completion dates, and the quantity of energy conservation measures installed.

If rebate is accepted, will you use the monies to fund future energy efficiency and/or demand reduction projects?

🗶 YES 🗌 NO

If rebate is declined, please indicate reason (optional):
