THE OFFICE OF THE OHIO CONSUMERS' COUNSEL  
NOTICE OF FILING DEPOSITIONS

---

Pursuant to Ohio Adm. Code 4901-1-21, The Office of the Ohio Consumers' Counsel gives notice of filing the deposition of David M. Roush, which was taken on December 18, 2006; the depositions of Gene Jensen and Robert Ivinskas, which were taken on January 8, 2007; the depositions of Karlen Cooper and Paul Johnson, which were taken on January 9, 2007; and the deposition of Kevin Walker, which was taken on January 12, 2007.

Respectfully submitted,

Janine L. Migden-Ostrander  
Consumers' Counsel

  
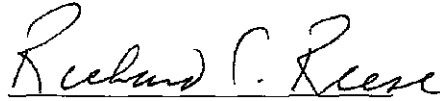

Jeffrey L. Small, Trial Counsel  
Richard C. Reese  
Assistant Consumers' Counsel

STIPULATIONS

It is stipulated by and among counsel for the respective parties that the deposition of David M. Roush, a Witness called by the Consumers' Counsel under the applicable Rules of Civil Procedure, may be reduced to writing in stenotypy by the Notary, whose notes thereafter may be transcribed out of the presence of the witness; and that proof of the official character and qualification of the Notary is waived.

David M. Rouch	
Examination by Mr. Small	6
Examination by Mr. Neilsen	82

- - -

1 MR. SMALL: This deposition is taken by  
2 notice to the utilities and agreed to with counsel as  
3 far as date and time in case No. 06-222-EL-SLF before  
4 the Public Utilities Commission of Ohio.

5 - - -

6 DAVID M. ROUSH  
7 being by me first duly sworn, as hereinafter  
8 certified, deposes and says as follows:

9 EXAMINATION

10 By Mr. Small:

11 Q. Mr. Roush, would you please state your  
12 name and spell your last name for the record?

13 A. My name is David M. Roush, R-O-U-S-H.

14 Q. And who is your employer?

15 A. I am employed by American Electric Power  
16 Service Corporation.

17 Q. And you have participated in the  
18 preparation or submission of what I have in front of  
19 me, the direct testimony of David M. Roush in the  
20 case that I just mentioned.

21 A. Yes. That testimony was submitted on  
22 October 6, 2006.

23 Q. All right. And that was on behalf of  
24 Columbus Southern Power and Ohio Power Company.

1           A.    Yes, sir.

2           Q.    Mr. Roush, have you ever had your  
3 deposition taken before?

4           A.    Yes, I have.

5           Q.    And in what instances did you do that?

6           A.    It's hard to keep track of the case.  I  
7 believe it was in the rate stabilization plan  
8 proceeding.

9           Q.    Involving American Electric Power?

10          A.    Yes; Columbus Southern Power and Ohio  
11 Power.

12          Q.    Okay.  I have few preliminary things I  
13 want to get out of the way.  That's one of them.  If  
14 I refer to American Electric Power, understand that I  
15 mean Columbus Southern Power and Ohio Power  
16 collectively.  Do you understand that?

17          A.    Yes, I do.

18          Q.    I think we are all pretty comfortable  
19 with that terminology.

20                A few other matters, you have had your  
21 deposition taken.  Some of this may be familiar to  
22 you.  Please respond to my questions audibly.  It's a  
23 little difficult for the court reporter to take down  
24 nods and shakes.  Respond orally.  Please inform me

1 if you don't understand any of my questions. I may  
2 be able to clarify or repeat or phrase the question  
3 in another way.

4 Let me know if you need to go back and  
5 clarify something in a previous question just to make  
6 sure that your responses are complete here today.  
7 Let me know if you need a break. I do expect the  
8 deposition to take most of the afternoon, and we'll  
9 probably take at least one break, but if you need a  
10 drink or to take a restroom break or anything else,  
11 let me know. We will probably find a convenient  
12 break point between questions.

13 I do ask we not take a break while a  
14 question is pending, but between questions we can do  
15 some sort of break.

16 Your counsel may interject objections  
17 during the examination. After the objection is  
18 entered by the court reporter, please respond to my  
19 question unless your counsel has instructed you not  
20 to respond to my question.

21 Do you understand all those items?

22 A. Yes, I believe I do.

23 Q. Okay. And do you have any impairment,  
24 taking medication, anything else that would impair

1 your ability to respond to my questions here today?

2 A. No, I'm not.

3 Q. Okay. As far as the materials you have  
4 in front of you, you have a copy of your prefiled  
5 testimony and the plan, the American Electric Power  
6 Reliability Plan that was filed on October 6, 2006;  
7 is that correct?

8 A. Yes, I have both of those documents.

9 Q. Okay. Again, as far as terminology, I  
10 will refer to it as the plan or AEP's plan. When I  
11 say that, I'm referring to the document filed on  
12 October 26 containing AEP's statements regarding  
13 reliability. I won't characterize it otherwise. Do  
14 you understand that?

15 A. I understand.

16 Q. We may have some other documents, but,  
17 for the most part, we will be using those two  
18 documents.

19 Okay, to your testimony. I will be  
20 directing your attention to certain portions of your  
21 testimony. On page 1 of your testimony you describe  
22 programs. Other than your educational background,  
23 you describe an EEI, Electric Rate Fundamentals  
24 program and Advanced Courses. Could you describe

1 when did you participate in those?

2 A. I do not recall specifically, but I  
3 believe the fundamentals course was right around  
4 1990. The advanced course was sometime in the mid  
5 '90s.

6 Q. And what were those courses?

7 A. Those courses were courses that EEI  
8 offered on the basics of rate-making, cost of  
9 service, rate design and also some personal topics  
10 that they selected.

11 Q. And how long did those programs go on?

12 A. If I remember correctly, the fundamentals  
13 course was a week long program. The advanced course  
14 was about a half week.

15 Q. Okay. Moving on to page 2 of your  
16 testimony, on page 2 you state that you are the  
17 manager - regulated pricing and analysis. Who do you  
18 report to? Is that your current position?

19 A. Yes, it is.

20 Q. And who do you report to in that  
21 position?

22 A. My direct supervisor is Dennis Bethel.

23 Q. What is his title?

24 A. I believe it is director of regulated

1 tariffs.

2 Q. It's a little bit hard to tell from the  
3 titles. Are you a part of a department, division,  
4 something like that, that has a name?

5 A. In general the department I work in is a  
6 regulatory department.

7 Q. Do you have a vice president in charge of  
8 that unit?

9 A. That would be Craig Baker.

10 Q. And he is a vice president?

11 A. I believe he may be a senior vice  
12 president.

13 Q. Okay. That's what I had in mind.

14 In your particular position as manager of  
15 regulated pricing and analysis, what are your duties  
16 in that position?

17 A. My responsibilities include preparing  
18 cost of service and rate design analyses for the  
19 various AEP system operating companies and also  
20 preparing special contracts and pricing for  
21 customers.

22 Q. You took the position in 2003. How many  
23 cost-of-service studies has your group conducted  
24 since you took that position?

1           A.    It's only an estimate. I'd say somewhere  
2 between a half dozen and a dozen of various types.

3           Q.    Have there been any in Ohio?

4           A.    I cannot think of any for Ohio.

5           Q.    Okay. I'm not sure we want to go through  
6 them all if there's 6 or 12 of them, but maybe you  
7 can tell me what the last one you prepared, what  
8 activity, regulatory filing, or whatever it was  
9 connected with.

10          A.    Probably the -- I don't know whether it's  
11 the most recent, but we just completed not that long  
12 ago a Kentucky rate case.

13          Q.    And were any of the other cost-of-service  
14 studies that you have prepared since taking the  
15 position in 2003 been for rate cases?

16          A.    No. I believe that's the only one that  
17 was for a traditional retail rate case.

18          Q.    Since AEP's merger with Central  
19 Southwest, have you been preparing cost-of-service  
20 studies or doing rate design work for what is  
21 commonly referred to as AEP West?

22          A.    We provide -- the Columbus office  
23 provides assistance to the people in the Tulsa office  
24 that has the direct responsibility.

1 Q. Those would not be included in the 6 to  
2 12 you talked about.

3 A. No.

4 Q. What other purpose -- what other function  
5 does the cost-of-service study serve other than for  
6 rate-making purposes? What would constitute the  
7 purposes for the other cost-of-service studies?

8 A. The other studies may not have been  
9 retail studies. A number of them were jurisdictional  
10 studies for wholesale ratemaking purposes or  
11 evaluating wholesale pricing mechanisms.

12 Q. Is it fair then to say that the Kentucky  
13 rate case is the only one you've been responsible for  
14 as the manager for preparing a cost of service for a  
15 retail situation, retail ratemaking situation?

16 A. Since I've been manager -- since  
17 July 2003, that's the only retail cost of service I  
18 believe we filed in a rate case under my direct  
19 supervision.

20 Q. On page 2, staying with page 2 and going  
21 to the middle of the page, you mention testimony in a  
22 variety of states. Maybe working backwards from Ohio  
23 there, what was the topic of your testimony in those  
24 cases? When I say "backwards," I mean Ohio,

1 Kentucky, Michigan, Indiana. What was the Ohio  
2 testimony that you're referring to there?

3 A. I have submitted testimony in Ohio in the  
4 bundling proceedings and the ETP cases in the  
5 context, I believe it was rate design.

6 Q. Was that before you took your managerial  
7 position?

8 A. That's correct. That's correct. That  
9 was in 1999. I have also testified in Ohio in the  
10 company's rate stabilization plan, the company's IGCC  
11 case, the company's storm -- well, no, I take that  
12 back. I don't believe I submitted testimony in the  
13 storm case.

14 Q. Did you submit testimony in a case that  
15 involved the acquisition of Mon Power?

16 A. That's correct, I submitted testimony in  
17 the Monongahela case.

18 Q. I call it Mon Power so I don't have to  
19 stumble over that. Does that sound like a fairly  
20 complete list?

21 A. I believe so.

22 Q. Four pieces of testimony?

23 A. I believe so. I may have overlooked one.

24 Q. I understand those pretty well. How

1 about Kentucky?

2 A. Kentucky, I submitted testimony in their  
3 rate case proceeding, the most recent rate case  
4 proceeding, and also an Energy Policy Act proceeding.

5 Q. Was that Energy Policy Act proceeding  
6 having to do with implementation of certain  
7 provisions in the Energy Policy Act of 2005?

8 A. If I'm remembering the testimony  
9 correctly, it was concerning smart metering and  
10 time-of-use type programs.

11 Q. I think that was a yes because that was  
12 the subject matter of the Energy Policy Act of '05.

13 A. I believe there were four different  
14 topics in the Energy Policy Act of 2005.

15 Q. Absolutely. We had a similar proceeding  
16 in Ohio. Did you have anything to do with a similar  
17 proceeding in Ohio, which was the 05-1500 proceeding?

18 A. I didn't have testimony in that the  
19 proceeding. I believe I presented information at  
20 three of the four technical conferences.

21 Q. I was in the audience myself. Did that  
22 include testimony on smart metering?

23 A. Yes, I believe it did.

24 Q. What was your role in the smart

1 metering -- we're going back to Ohio here because you  
2 piqued my interest. What was your role in I believe  
3 the panel discussion of smart metering?

4 A. I believe the portion I presented was  
5 related to the time-of-use programs that the company  
6 currently offers.

7 Q. So it was with a description of the  
8 programs the company already has.

9 A. That's correct.

10 Q. Do you participate in AEP's development  
11 of its smart metering or advanced metering  
12 initiatives, programs, proposals, just generally in  
13 that field? Really, the question, you were selected  
14 as a spokesperson for AEP, and I'm asking what's your  
15 participation in that back at the office.

16 A. Sure. My focus is primarily on the rates  
17 and tariffs, not on the actual technology itself.

18 Q. Okay. Because you were describing  
19 something that was -- not the metering, but you were  
20 describing the rate related portion, that's the  
21 reason you became involved in the panel discussions  
22 in Ohio.

23 A. I believe that's correct.

24 Q. Okay. And the description of the Ohio

1 tariffs having to do with time of use, that's what  
2 you were describing.

3 A. Yes. If I remember the presentation  
4 correctly, yes.

5 Q. Okay. All right. Sorry for the detour,  
6 but we are back at Michigan and Indiana. What did  
7 you do for testimony in Michigan and Indiana?

8 A. My testimony in Michigan was related to  
9 the restructuring Customer Choice proceedings there.  
10 That testimony I recall in Indiana was related to  
11 stand-by service, special contract.

12 Q. And with respect to electric  
13 restructuring in Michigan, what was your portion of  
14 AEP's presentation?

15 A. I believe it was primarily related to the  
16 unbundling of the rates.

17 Q. Similar to your work in Ohio when you  
18 testified then in the ETP cases.

19 A. I believe so. You're testing my memory  
20 because they're both back in the late '90s, but I  
21 believe they were similar.

22 Q. Okay. Let's go to page 3 of your  
23 testimony. At the top of page 3 you list five  
24 exhibits. What role did you take in the preparation

1 of those five exhibits?

2 A. I either prepared them, or they were  
3 prepared under my supervision by somebody else for  
4 me.

5 Q. Okay. So the exhibits you have attached  
6 to your testimony would have all been prepared within  
7 the unit that you manage as the manager of regulated  
8 pricing analysis.

9 A. Yes, that's correct.

10 Q. And as far as the calculations that are  
11 either on those sheets or derived from those sheets,  
12 is it also true that either you or the group that you  
13 manage performed those calculations?

14 A. Yes.

15 Q. And as far as the plan, again, the AEP  
16 plan that was filed on October 6 -- I guess that's  
17 not really descriptive. Everything was filed on  
18 October 6, but there was a plan that was not part of  
19 the testimony. What role did you have in the  
20 preparation of the plan, AEP's plan?

21 A. I would have reviewed various drafts  
22 submitted for comment.

23 Q. So your role was editorial.

24 A. Yes.

1           Q.    Okay. But you or your group were not  
2 involved in doing the actual calculations that appear  
3 in the plan. There were a number of numerical  
4 exercises done in the plan. Your group is not  
5 responsible for preparing those numbers; is that  
6 correct?

7           A.    Only if they were pulled from my exhibits  
8 in some way, shape or form.

9           Q.    Do you know of any circumstances where  
10 the information went from you to the plan rather than  
11 from the plan to your work?

12          A.    Yes.

13          Q.    Okay. Could you point out those  
14 instances?

15          A.    One instance is on page 51.

16          Q.    Okay, move slowly so everybody can stay  
17 with you.

18          A.    Sure. Page 51, chart 28D, the line  
19 labeled "Base Reliability Inflation."

20          Q.    Where is that line?

21          A.    It is the next-to-last line in the chart.

22          Q.    Okay. What about the numbers here?

23          A.    Those numbers came directly from DMR  
24 Exhibit 1.

1           Q.    Okay.  Now, I understand from your  
2 testimony -- we're skipping ahead a little bit, but  
3 let's take care of this.  The inflation numbers that  
4 you calculated used values taken from Mr. Jensen; is  
5 that correct?  I believe your testimony says the  
6 5.5 percent inflation rate was provided to you by  
7 Mr. Jensen; is that correct?

8           A.    That is correct.

9           Q.    So he would have had something to do with  
10 these numbers as well on page 51 of the plan because  
11 they relate to inflation; is that correct?

12          A.    That is correct because they were derived  
13 using his 5.5 percent factor, in part.

14          Q.    So I understand the relationship, he's  
15 providing you input values, you're doing valuation  
16 calculations, and you provided those calculations,  
17 and they were inserted into the plan.  Is that a fair  
18 statement?

19          A.    Yes, I believe it is.

20          Q.    Anything else in the plan that came from  
21 you?

22          A.    No, I do not see any.  I finished looking  
23 through.  I don't see any other values that came from  
24 me in the plan.

1           Q.    It's kind of a follow-up. We will be  
2 looking through the plan a little more later on. If  
3 anything strikes your attention as we go through it,  
4 let me know.

5                   I should have included those  
6 instructions. If you need time to look at your  
7 documents on read your testimony, please take that  
8 opportunity to become clear about everything you  
9 think it is you need to be clear about.

10           A.    Thank you.

11           Q.    Page 3, we're back to your testimony,  
12 lines 11 through 20, the middle question and answer  
13 on that page, and if you could keep your finger in  
14 that page and also look at DMR Exhibit 2, 1 of 7. Do  
15 you have that?

16           A.    Yes, I do.

17           Q.    Okay. Now, the question and answer  
18 relate to the included costs of having to do with  
19 reliability, and that is also the subject of your DMR  
20 Exhibit 2, page 1 of 7, which is entitled Projected  
21 Reliability Expenditures. How does AEP determine  
22 which expenses are related to reliability? There is  
23 a distinction being made, I believe, between  
24 reliability expenditures and other expenditures on

1 distribution functions. How does AEP determine which  
2 functions are related to reliability?

3 A. I don't know how.

4 Q. Okay.

5 A. One of the other witnesses could speak to  
6 that, I'm sure.

7 Q. Do you know which witness could address  
8 that item?

9 A. I believe Mr. Jensen could speak to that  
10 matter.

11 Q. And just to make sure we fully explored  
12 that item, could you take a look at page 47 of the  
13 plan and chart 27 on that page? And that chart has  
14 to do with reliability-based expenditures, so from  
15 your last response, would it be fair to say that you  
16 don't know how those numbers in chart 27, which are  
17 historical now, not the forecast one in your exhibit,  
18 but those historical numbers, you don't know where  
19 they come from.

20 A. Other than I believe they came from  
21 Mr. Jensen.

22 Q. Right. But you don't know how  
23 reliability expenditures are determined as opposed to  
24 total expenditures, how they're divided up.

1 A. No, I do not.

2 Q. Again, on sort of the same topic to make  
3 sure we're clear about this -- well, do you know --  
4 I'm going to go back to chart 27 on page 47 of the  
5 plan. And you said you didn't know where the total  
6 numbers came from, but do you know how the base  
7 reliability expenditures were determined?

8 A. No, I do not.

9 Q. Okay. Do you see the double starred  
10 expression below the chart?

11 A. Yes, I do.

12 Q. Appears to be providing at least partial  
13 explanation for the base reliability. It says, "Base  
14 reliability expenditures are the average reliability  
15 expenditures taken from year 2004, 2005 and 2006."  
16 Do you see that?

17 A. Yes. I see that's an excerpt of the  
18 footnote.

19 Q. Right. And the rest of it is, "2006  
20 expenditures were based on eight-month actual and  
21 four-month projected data." That's the full quote of  
22 it; right?

23 A. Yes, that is the quote.

24 Q. Okay. My question is, it appears that

1 the base reliability expenditures that are shown in  
2 the far right-hand portion of the chart are not the  
3 average reliability expenditures from 2004, 2005 and  
4 2006, but are those numbers maybe the average of some  
5 portion of those numbers; in other words, they're the  
6 average of the base rather than the average of the  
7 total expenditures from a historical perspective. Do  
8 you understand what I mean? I can maybe direct your  
9 attention if that isn't clear.

10 A. Can you please try again?

11 Q. Let's try in real numbers here.  
12 \$40.6 million for base reliability expenditures for  
13 O&M. Do you see that?

14 A. Yes.

15 Q. And according to the double star  
16 explanation, that's supposed to somehow be an average  
17 of years 2004, 2005 and 2006, where we understand  
18 2006 is partially projected. Do you see that?

19 A. Yes.

20 Q. Okay. And would you agree with me that  
21 the numbers for O&M for 2004, 2005 and 2006, 40.6,  
22 could not possibly be an average of those three  
23 numbers if they include the O&M in the row called  
24 Stipulation? In other words, it looks like 40.6 is

1 an average of 41.6 for 2006, 39.8 for 2005, and  
2 40.4 for 2004.

3 A. That's, I believe, the arithmetic that  
4 was done, yes.

5 Q. So it's not an average including the  
6 expenditures called Stipulation; it's an average for  
7 something called Base, which was only a part of the  
8 expenditures for 2004 and 2005.

9 A. I'm not the one to speak to  
10 characterizing the expenditures. The arithmetic is  
11 as you described.

12 Q. Okay. So I think you're saying you don't  
13 have any quarrel with my representation, but you had  
14 nothing to do with determining what base reliability  
15 expenditures were?

16 A. I'm saying the math is as you represented  
17 it. That line is averaged, and the line below it is  
18 not included in the average.

19 Q. Who determined what the base reliability  
20 expenditures were?

21 A. I believe that would be Mr. Jensen.

22 Q. Okay. Anytime you refer to -- anytime  
23 you refer to base reliability expenditures, they are  
24 numbers given to you by Mr. Jensen; is that correct?

1 A. (No response.)

2 Q. Maybe a fairer way of saying it is in  
3 your testimony you refer to incremental. The  
4 incremental is above the base; is that correct?

5 A. Yes, that is correct.

6 Q. And the base was determined by  
7 Mr. Jensen.

8 A. Yes. I believe that to be the case.

9 Q. Okay. Back to your testimony, and I  
10 think we had -- I'm still on page 3 in the middle  
11 portion of the page, and there's a reference there  
12 to, and I quote, "based upon data for the period  
13 July 1, 2007 through December 31, 2008." Do you see  
14 that.

15 A. Yes, I do.

16 Q. Right in the middle of line 16 and 17.

17 A. Yes, I do.

18 Q. It says "based upon data." That's a  
19 future period, not a historical period, so what do  
20 you mean by "data"?

21 A. I believe I was using data in a very  
22 generic sense for all of the information used to  
23 design the reliability cost recovery rider.

24 Q. Okay. What information did you use

1 that's -- I don't want to state the obvious, but the  
2 July 1, 2007 through December 31, 2008, if you used  
3 that information, it must have been projected; is  
4 that correct?

5 A. Yes.

6 Q. Okay. What projected numbers did you use  
7 in your work?

8 A. Not to be sarcastic, but pretty much  
9 every number in DMR Exhibits 1 through 5 is a  
10 projection.

11 Q. Okay. Because you're designing rates for  
12 a future period.

13 A. Certain numbers aren't. Obviously, there  
14 are certain numbers labeled 2005 which would be  
15 historical, but, for the most part, those numbers  
16 would all be projections.

17 Q. Okay. I'd like to explore a little bit  
18 the source of those projections. At one point in  
19 your testimony you refer to Long-Term Forecast Report  
20 for AEP. You may recall -- this is just preliminary,  
21 so --

22 A. Sure, on page 4. Sure.

23 Q. And there are numbers, for instance, on  
24 DMR Exhibit 1, page 1 of 1, that looked like load

1 forecast.

2 A. Yes.

3 Q. Is that the information that came in the  
4 Long-Term Forecast Report?

5 A. That came from the Long-Term Forecast  
6 Report, yes.

7 Q. Is there any other information taken from  
8 the Long-Term Forecast Report?

9 A. Yes, I believe there was more detailed  
10 information in that energy forecast that was used.

11 Q. Is that information shown in your  
12 exhibits?

13 A. No. It was provided in a workpaper.

14 Q. It was provided by whom and given to  
15 whom?

16 A. By me or the company to OCC in a request  
17 for production of documents, 8-92.

18 Q. Just in summary fashion, what is the gist  
19 of that information that was used and how was it  
20 used?

21 A. The information there is monthly GWH  
22 forecasts by revenue class for the period July '07  
23 through December '08, and it was used to develop  
24 forecast-based distribution revenue, which is used in

1 DMR Exhibit 2, page 2, column 1, and page 5, column  
2 1.

3 Q. Okay. Kind of a summary of that is that  
4 you, you know, on behalf of AEP needed to develop a  
5 forecast of additional revenues due to the rider that  
6 AEP proposes in this case. Is that the gist of it?  
7 And you were doing it on a monthly basis, and you  
8 were doing it by revenue class.

9 A. The starting point was really to develop  
10 a projection of distribution revenues to which the  
11 rider would be applicable so then you could calculate  
12 the revenues the rider would produce.

13 Q. So we do have an end result of the  
14 revenues that the rider would produce.

15 A. If I'm understanding you correctly, yes.

16 Q. And I do have that response in front of  
17 me, all this material, the monthly values. Because I  
18 hadn't anticipated using this sheet, I don't have  
19 copies of it, but I have one in front of me, and I'll  
20 show you AEP's response to OCC's request for  
21 production 8-92, page 2 of 16, and I'm going to ask  
22 you about this terminology "base distribution" in  
23 just a second, but I'm going to give this material to  
24 you temporarily so you can take a look at it.

1 A. I have a copy.

2 Q. You have a copy, very good.

3 MR. NOURSE: So do I.

4 MR. SMALL: Very well prepared.

5 Q. Could you explain what that terminology,  
6 "base distribution," means in that table?

7 A. Certainly. The distinction we make is  
8 between distribution revenue collected through a  
9 rider versus distribution revenue collected or  
10 collected through the base tariff rate, i.e., like a  
11 customer charge, a standard energy charge, that type  
12 of thing, so the base distribution revenues are those  
13 components in the tariff rate.

14 Q. I see. Then below that there's a  
15 distribution rider, and that's another number, and  
16 base plus distribution equals total distribution  
17 revenue. Is that the math that's going on here?

18 A. Yes, sir.

19 Q. Going back to DMR Exhibit 1, page 1 of 1,  
20 we have information there that goes beyond 2007, and,  
21 as you said, the material comes from the Long-Term  
22 Forecast Report. Were those numbers used and how  
23 were they used; in other words, other years, other  
24 than through 2007, which is what your testimony says

1 on page 3?

2 A. I believe you mean through 2008.

3 Q. You're correct. It says December 31,  
4 2008, yes. After 2008 there are three more years  
5 listed there.

6 A. Sure. The rest of information was used  
7 to complete the five years of the plan information.  
8 As we were discussing earlier, the plan goes out,  
9 provides information out for five years.

10 Q. Yes. That is one thing I wanted to  
11 inquire into. Your testimony says that the rider  
12 would be in effect until the next distribution case,  
13 and then new rates would go into effect after 2008.  
14 So really the question is, why do we have to have  
15 calculations after that point if it's going to be  
16 part of the next rate case for distribution rates  
17 after 2008?

18 A. I believe you can probably talk to  
19 Mr. Walker in more detail about that, but the intent,  
20 I believe, that the company was to present as  
21 complete a picture as we had, which was the full five  
22 year scope of the plan.

23 Q. That isn't required for the task that you  
24 undertook in this case, was it? You're just putting

1 together, coming up with the rider proposal through  
2 the end of 2008; is that correct?

3 A. The information was not needed for my  
4 calculations beyond the end of 2008.

5 Q. That's what you used the forecast for,  
6 the end of 2008, as it says in your testimony.

7 A. That's correct.

8 Q. I'm going to page 3 and carry over to  
9 page 4, the question that begins on the bottom of  
10 page 3. Here you discuss the relationship between  
11 inflation and load growth. Is it correct to say that  
12 the design and the calculations that you've conducted  
13 to come up with the rate design for this recognizes  
14 the growth in distribution revenues over time? And  
15 when I say "over time," I guess we're talking about  
16 through the end of 2008.

17 A. In the design of the rider I do recognize  
18 growth and distribution revenues during that period.

19 Q. Okay. And for that you would need a load  
20 forecast and rate information; is that correct?

21 A. Yes. Those are the two factors I use.

22 Q. Now, the exhibit that we just  
23 discussed -- I'm sorry, not exhibit, but request for  
24 production 8-92 --

1           A.    Yes, sir.

2           Q.    -- that provides monthly values for the  
3 load forecast, and it has residential, commercial,  
4 industrial, other energy, but it doesn't -- that  
5 isn't sufficient to calculate revenues; is that  
6 correct? You're going to need -- these are not  
7 rates; these are -- there are more tariff classes  
8 than are shown in this exhibit; is that correct?

9           A.    Yes. There are more tariff classes, and  
10 there are revenue classes.

11          Q.    And in order to do the calculations for  
12 revenue impacts and collections under the riders, you  
13 would have to do calculations below these revenue  
14 classes, in other words, in more detail; is that  
15 correct? You would have to do it by the tariff  
16 classes, not just by residential, commercial,  
17 industrial.

18          A.    Not necessarily.

19          Q.    Well, let's just discuss how you did it  
20 rather than what you have to do. Why don't you tell  
21 me how it was done.

22          A.    Sure. Basically, you know, the revenue  
23 classes are defined to be somewhat homogeneous groups  
24 of customers, and we have historical information on

1     what they're paying per kilowatt-hour, and we will  
2     use those historical realizations by revenue class to  
3     apply to projected revenue class kilowatt-hours to  
4     get projected levels.

5             Q.     So you did it at the revenue class level.

6             A.     Yes.

7             Q.     Recognizing certain historical  
8     relationships between the revenue class and how the  
9     different tariffs classes operated over time.

10            A.     Yes.

11            Q.     The response to 8-92 would be the most  
12     detail needed to do that analysis.

13            A.     Yes.

14            Q.     All right. Your response just a moment  
15     ago, you said there were certain -- that you used  
16     certain historical relationships, in other words,  
17     between -- in order to obtain, to give an example, to  
18     obtain the information by residential class, certain  
19     relationship between that and how the different rate  
20     classes operated over time; is that correct? There  
21     has to be some historical relationship there.

22            A.     I guess probably the easiest way to  
23     explain it, take the first number.

24            Q.     Okay.

1           A.    And on page 1 of 16 of OCC request for  
2 production of documents 8-92, if you look in the  
3 first column is year/month, and it shows 2006-'07, so  
4 July of 2006, and under that column labeled Average  
5 Base Distribution Costs in dollars per megawatt-hours  
6 the residential column shows \$31.14 for July of '06.

7           Q.    I see that.

8           A.    That is based upon the actual billed  
9 information for all customers in Columbus Southern  
10 Power's residential revenue class for the various  
11 tariff classes that exist. So that's the composite  
12 of all that historical information, yes.

13          Q.    So you wouldn't actually be using the  
14 rates in the tariff, but you would be using, for lack  
15 of a better word, the realization from those tariffs  
16 that produced that 31.14 figure.

17          A.    Yes. The 31.14 was also applying the  
18 tariff rates to population of customers that existed  
19 at that time.

20          Q.    And that happened to be the result from  
21 all that.

22          A.    Yes, that's correct.

23          Q.    And similarly for the other classes and  
24 other months and other years.

1 A. Yes, sir.

2 Q. Just trying to be complete here.

3 And this relationship that you review  
4 between inflation and load growth recognizes that AEP  
5 is able to expand expenditures even though rates  
6 remain the same, meaning that the revenues are  
7 expanding over time and AEP is able to expand its  
8 expenditures as a result of that load growth; is that  
9 correct?

10 A. Yes. That's the basic fundamentals, yes.

11 Q. Okay. Let's go a few pages ahead and go  
12 to page 7. Kind of keep your finger in it because  
13 I'm going to be returning to page 3. You refer on  
14 line 5 of page 7 to the company's intention to  
15 practice deferral accounting. Do you see that?

16 A. Yes. The company is intending to  
17 practice overrecovery deferral accounting.

18 Q. Because of the proposed deferral  
19 accounting, if the company's plan did not recognize  
20 the load growth and there was load growth, then there  
21 would be liabilities produced; is that correct? In  
22 other words, the company would receive more revenues  
23 than they had in expenditures because there was load  
24 growth.

1           A.    Let me take it a step at a time and make  
2   sure I understand.

3           Q.    Okay.

4           A.    If load growth were higher than projected  
5   or the company did not consider load growth --

6           Q.    That's the question.

7           A.    -- and load growth did occur, then one  
8   would anticipate revenues would be higher/collection  
9   would be higher.

10          Q.    There would be overcollection?

11          A.    Through under/overrecovery accounting  
12   that increased revenues would be recognized compared  
13   to expenditures, and the overrecovery would be less  
14   or the -- the underrecovery would be less or  
15   overrecovery could be greater, depending on the  
16   scenario.

17          Q.    Okay. Well, I guess I'm having some  
18   confusion about how the underrecovery could be less  
19   because isn't the concept here that the company would  
20   be authorized to make certain expenditures? They  
21   wouldn't make expenditures more than are proposed in  
22   your testimony, would they? Would AEP?

23                I'm having a hard time. If you didn't  
24   recognize load growth and there was load growth, I'm

1 having a hard time understanding how you could still  
2 have an underrecovery.

3 A. One circumstance I think that could occur  
4 could just be a timing, that this thing happened  
5 sooner in the year or was lumpier in some way than  
6 what's in the estimates I provided.

7 Q. Is it part of AEP's plan that also be  
8 recognized in this deferral accounting that you're  
9 talking about on page 7 of your testimony that the  
10 actual timing of the expenditures would be considered  
11 in the deferral accounting?

12 A. Yes, I believe.

13 Q. Let me go to a particular point in your  
14 testimony where you do seem to discuss this. There  
15 are figures in your exhibits that have spread the  
16 expenditures evenly over the months. Are you  
17 familiar with that?

18 A. Yes.

19 Q. Where did that assumption come from?

20 A. That was basically, I believe, an  
21 assumption I made having no better information for  
22 how the dollars spent would actually fall.

23 Q. So people responsible for putting the  
24 plan together didn't give you more detailed monthly

1 information for you to spread it evenly over the  
2 months.

3 A. That is correct.

4 Q. All right. Going back to the original  
5 question, which was then if the spending pattern does  
6 not meet the pattern that you assumed as part of your  
7 testimony, is it AEP's proposal to make as part of  
8 its deferral accounting a recognition of that timing?  
9 You spend it all in one month rather than spread it  
10 equally over the 12 months, and that would be taken  
11 into account in the deferral accounting, or you spend  
12 it all in 12 months and didn't spend anything  
13 earlier, and the difference between that and  
14 spreading evenly over the month would be recognized  
15 in the deferral accounting. Is that AEP's proposal?

16 A. AEP's proposal is that the  
17 under/overrecovery deferral accounting would  
18 recognize both the actual timing of the spending and  
19 the actual timing of collection, so both can vary  
20 from the projections that I have, yes.

21 Q. Okay. Where is that found in your  
22 testimony? I don't see that part of the plan in your  
23 testimony, or is that --

24 A. I believe --

1 Q. Am I looking at it on page 7 at the top  
2 when you say, "The companies intend to practice  
3 under/overrecovery deferral accounting," is that the  
4 description of what you just said?

5 A. For me, yes, that is.

6 Q. Okay. Is there any more detailed  
7 description of that elsewhere in the plan or in  
8 somebody else's testimony that I may have missed?

9 A. Not to my knowledge.

10 Q. All right. Going back to our use of  
11 projections, now I want to contrast the situation to  
12 the hypothetical that I gave you, which was the load  
13 forecast is not recognized. By recognizing the load  
14 forecast, presumably if that load forecast is any  
15 good, it will reduce the amount of deferrals or the  
16 overages or underages. It will reduce that  
17 difference; otherwise, you wouldn't be doing it; is  
18 that correct?

19 A. Well, in defense of our load forecasting  
20 folks, they project based on normal weather.

21 Q. Okay. I understand. But really the  
22 question is -- you know, I understand. Let me put it  
23 this way. Is it a fair statement that by recognizing  
24 this, that the expectation -- I know the load

1 forecast people are expecting average weather here  
2 when they did their numbers, but the expectation is  
3 that by recognizing that load forecast, you would be  
4 reducing the difference between the actual and the  
5 projected revenue streams under the rider.

6 A. Yes. The intent was to use -- recognize  
7 that we anticipated our distribution revenue would  
8 grow, and as such, design the rider such that it  
9 reflected that growth in distribution revenue, so at  
10 the end of the day, the expenditures and the  
11 collections were as close to zero as possible.

12 MR. SMALL: Let's go off the record for a  
13 second.

14 (Discussion off record.)

15 (Recess taken.)

16 Q. (By Mr. Small) Mr. Roush, I just have a  
17 little bit of follow-up to the matters I just  
18 inquired into. We concluded with your statement that  
19 under/overrecovery would be reduced by the use of  
20 load forecast. Is there any other purpose for having  
21 the load forecast as part of your calculations?

22 A. Yes. For me the main intent it to get  
23 the calculation as reasonably accurate as we can.

24 Q. And what function does that serve other

1 than reducing the likelihood of over and  
2 undercollection? Does that have any other effect?

3 A. For me, just on general principle, I  
4 wanted to be as accurate as I could possibly get it.  
5 Other than that, I think the ultimate purpose is it  
6 minimizes any under/overcollection.

7 Q. I wanted to address that as far as the  
8 matter of accuracy of the 2006 load forecast. That  
9 was used in this case, is that correct, the numbers  
10 that were in the 2006 load forecast report which was  
11 filed approximately April 2006; is that correct?

12 Noting for the record I used to  
13 contribute to and file the Long-Term Forecast Report.

14 A. Yes. The 2006 Long-Term Forecast Report  
15 was used.

16 Q. Okay. And this is December of 2006, and  
17 I would imagine that the 2007 Long-Term Forecast  
18 Report or the forecast that would be used is well  
19 developed if not finalized at this time. Are you  
20 familiar with the follow-up load forecast?

21 A. I have not seen it. It may be complete  
22 at this time, likely.

23 Q. Did you make any inquiry about it in  
24 connection with this case?

1 A. Not to date, no.

2 Q. Who made the decision to use the figures  
3 in the 2006 Long-Term Forecast Report?

4 A. I did, because it was the most recently  
5 available to me at the time.

6 Q. And are you familiar with the AEP case  
7 before the Public Utilities Commission that involves  
8 Ormet, the aluminum smelting operation along the Ohio  
9 River?

10 A. Yes, I am familiar with that case.

11 Q. And that case has to do with rate  
12 provisions that would bring Ormet on line starting in  
13 2007. Is that a fair characterization?

14 A. Ormet will become a customer of Columbus  
15 Southern Power and Ohio Power Company January 1st of  
16 '07, yes.

17 Q. Okay. And how many kilowatt-hours will  
18 that contribute to 2007 sales by AEP?

19 A. I don't know the specific number. I know  
20 they're ramping up over a six-month period they're  
21 projecting.

22 Q. They're something like a 600-megawatt  
23 customer, isn't it, a very large customer?

24 A. I believe they're anticipating at full

1 load about 515 to 520 megawatts.

2 Q. That sounds familiar. That's a fair  
3 up-tick to the sales of AEP. Was that taken into  
4 consideration during the 2006 load forecast that you  
5 used?

6 A. No, it was not, because that case hadn't  
7 been decided at that point.

8 Q. You would anticipate it would be part of  
9 the 2007 load forecast?

10 A. I would suspect so, depending on when  
11 they completed it and when that Ormet case got  
12 completed. I don't recall the exact time.

13 Q. The point is that development is not  
14 recognized in your figures, is it?

15 A. That is correct.

16 Q. All right. Let's go to page 4, first  
17 full answer on that page, question and answer. In  
18 that answer you mention DMR Exhibit 1. I think  
19 that's line 10. And if you could look at DMR  
20 Exhibit 1, and also I'm going to ask you to compare  
21 that with chart 28D of the AEP plan. I believe the  
22 DMR exhibit 2, page 1 of 7, would be the comparison.  
23 Do you have both the attachment to your testimony and  
24 chart 28D from the plan?

1           A.    Yes, I do.

2           Q.    And the question is, why are -- I don't  
3 see any of the numbers from chart 28D in your DMR  
4 Exhibit 2, page 1 of 7. The question is why don't I  
5 see those figures in your exhibit, or what is the  
6 relationship between 28D and your DMR Exhibit 2?

7           A.    Part of the answer is there are two  
8 slightly incorrect numbers on DMR Exhibit 2. If you  
9 look in the column labeled Total --

10          Q.    Let's be clear, we have Capital  
11 Investment at the top.

12          A.    Capital Investment.

13          Q.    Capital Investment.

14          A.    Yes. Yes, sir. In the Capital  
15 Investment in the column labeled Total, you see two  
16 numbers in DMR Exhibit 2, 69,240 and 77,120.

17          Q.    I see that.

18          A.    Those two numbers should be 69,640 and  
19 77,550,000. I apologize. I used shorthand on the  
20 first, 69,640,000, and those do match, should match  
21 chart 28D.

22          Q.    For year two -- I'm sorry, for year 1 and  
23 2 for capital.

24          A.    That's correct. And then year 1 and 2,

1 O&M, are shown in the section labeled O&M Expense on  
2 DMR Exhibit 2 column labeled Total, \$38,350,000.

3 Q. And that number is on both chart 28D and  
4 DMR Exhibit 2.

5 A. That is correct.

6 Q. So those numbers are correct, the only  
7 corrections you are making are to the Capital  
8 Investment numbers.

9 A. Yes, that's correct.

10 Q. Not to make too fine of point on it, but  
11 did you notice those errors before this deposition  
12 took place?

13 A. Yes, I did.

14 Q. You did. I presume then that you have  
15 had a chance to look at the remainder of the numbers  
16 and determine whether there are any changes that are  
17 required as a result of those changes. Are there any  
18 changes?

19 A. Changing those numbers would flow through  
20 the calculations because they're small changes in  
21 capital investment, and I don't know that they would  
22 be significant changes, and I intended to correct  
23 them on the stand.

24 Q. Well, we'd like to know it a little bit

1 before that, so maybe you could go through it.

2 MR. NOURSE: Are you asking for him to go  
3 through it now or to provide something in an update?

4 MR. SMALL: Let's find out how extensive  
5 it is.

6 Q. Is it a matter of just correcting a few  
7 numbers here, or do we have a flow-through of things  
8 that might even affect other exhibits and pages?

9 A. Changing those numbers would flow through  
10 to basically all of DMR Exhibit 2.

11 MR. SMALL: Hold on a second.

12 (Discussion off record.)

13 MR. SMALL: We would like to see the  
14 corrections on these pages. Could you give us a time  
15 frame or how soon we could obtain that and we could  
16 shorten this process quite a bit?

17 MR. NOURSE: Can we go off the record?

18 MR. SMALL: We can go off the record.

19 (Discussion off record.)

20 MR. SMALL: We have had a brief  
21 off-the-record discussion. First, following through  
22 on the correction that Mr. Roush was making to his  
23 exhibits, AEP has agreed to provide -- we have e-mail  
24 addresses for everybody?

1 MR. NOURSE: Yes.

2 MR. SMALL: An e-mail correction to the  
3 exhibits and all the carry-through calculations in  
4 the exhibits by Mr. Roush's testimony by Wednesday of  
5 this week.

6 Have I correctly stated that, Mr. Nourse?

7 MR. NOURSE: Yes.

8 MR. SMALL: We also determined in another  
9 brief discussion that the plan on page 47 has a  
10 mislabeled section which says Section 6, and it  
11 should be Section 5, and that's the reference  
12 Mr. Roush makes on page 3 of his testimony,  
13 Section 5.

14 With that we will move on without going  
15 through the extent of the numerous flow-through  
16 calculations.

17 Q. (By Mr. Small) Turn to page 4 at the  
18 bottom of your testimony. I have some questions  
19 about the 60/40 split that appears on the exhibit you  
20 just mentioned, DMR 2, 1 of 7. Did the pole miles  
21 and underground circuit miles come to exactly 60/40?  
22 They're awfully round numbers.

23 A. Rounded to the nearest one percentage,  
24 yes.

1 Q. The nearest one percentage?

2 A. Yes.

3 Q. Is it closer to 60 than 61 and closer to  
4 40 than it is to 39?

5 A. That's my recollection, yes.

6 Q. And for that calculation you added total  
7 pole miles and underground primary circuit miles; is  
8 that correct? You added those and took the ratio  
9 between Columbus Southern Power and Ohio Power.

10 A. Yes, that's correct. I added the  
11 overhead line miles and the underground primary  
12 circuit miles, added the total miles and calculated  
13 the ratio.

14 Q. Now, these subcomponents of the plan for  
15 different expenditure categories, isn't there more  
16 detailed information in the plan, for instance, on  
17 how much is spent on vegetation and so forth by the  
18 companies that would provide more guidance than just  
19 using a 60/40 split based on pole miles?

20 A. I do not believe the plan shows any  
21 information split between CSP and HP.

22 Q. There is information on that. There's an  
23 accounting by the companies. AEP does know how much  
24 vegetation management it does split between Ohio

1 Power and Columbus Southern, doesn't it?

2 A. I believe it does.

3 Q. And all these other categories that are  
4 part of plan?

5 A. You may be mixing apples and oranges on  
6 me a little bit. I believe I was answering a  
7 question about actual expenditures and historical  
8 costs. The plan is all reflecting projected  
9 expenditures.

10 Q. Right. But this information exists on an  
11 historical basis, the split between Ohio Power and  
12 Columbus Southern Power, how much they have for  
13 vegetation management, how many substations they  
14 have, how many mobile transformers they have and so  
15 forth and so on. All the detail in the plan has an  
16 historical basis recorded by the company; correct?  
17 You have historical information on all of that.

18 A. I guess we have historical information.  
19 I'm not sure I can draw the same correlation you're  
20 making to what's in the plan.

21 Q. This is just a factual matter. You have  
22 to have the information because the accounting  
23 difference for ratemaking purposes has to be by  
24 company; right?

1           A.    As far as historical data.

2           Q.    Historical data?

3           A.    Yes, the historical is by company.

4           Q.    Wouldn't the use of that detailed  
5 information on those programs be more accurate than a  
6 simple use of pole miles?

7           A.    My answer would be not necessarily, and  
8 the use of pole mile proxy was representative of  
9 facilities that we -- the bulk of the facilities this  
10 work would be done on.

11          Q.    And who made the decision to do it on  
12 that basis?

13          A.    That information was provided by  
14 Mr. Invinskas.

15          Q.    I'm not entirely clear about that. He  
16 provided you with the information, or he was the one  
17 who made the decision to use that for the allocation  
18 purposes?

19          A.    Based upon discussions with him, we  
20 agreed that was the best basis.

21          Q.    Page 5 of your testimony, first full  
22 question and answer towards the middle of it, and I  
23 think we got to this a little bit earlier, you  
24 mention spreading the gross incremental investment

1 actually across the months on line 7 and 8. Do you  
2 see that?

3 A. Equally across the months of each plan  
4 year, yes.

5 Q. And that was an assumption you came up  
6 with; is that correct?

7 A. Yes, that's correct.

8 Q. Did you have discussions with anybody,  
9 Mr. Invinskas or anyone else about what the actual  
10 plan for the expenditures by AEP is?

11 A. I don't recall who I spoke with, but I  
12 believe I asked if there was any monthly detail, and  
13 I don't believe that detail was available. I don't  
14 recall if it was Mr. Invinskas or not.

15 Q. And when you were informed that there was  
16 no information or no monthly information available,  
17 were you given that information or were you given --  
18 were you told why there wasn't any monthly  
19 information? Did you have a discussion, or did they  
20 just say: No, I don't have the information?

21 A. I don't recall.

22 Q. At the time when you asked the question,  
23 you asked it for purposes of determining how this  
24 portion of your calculations should be done, that's

1 the reason why you asked whether there was monthly  
2 information; is that correct?

3 A. Yes. I asked for the information -- I  
4 asked about the information in preparing this  
5 calculation.

6 Q. And without being given any help along  
7 those lines, you determined to make the assumption  
8 that you did about spreading it across months  
9 equally.

10 A. Yes.

11 Q. Okay. Let's go to the question and  
12 answer at the bottom of page 5. You mention the  
13 10.5 percent return on equity in Case 05-765, the  
14 case involving Monongahela Power; is that correct?

15 A. I don't recall, but I'm sure you're  
16 correct.

17 Q. That really was a question. I think I'm  
18 right about that, but you testified in it. What was  
19 the subject of your testimony in the matter involving  
20 Mon Power?

21 A. My testimony in that proceeding discussed  
22 the calculation of the power acquisition rider, the  
23 litigation termination rider, and the placement of  
24 Mon Power customers on to Columbus Southern Power's

1       tariff.

2               Q.    It probably included a discussion of  
3       greater return on equity.

4               A.    I don't believe so.

5               Q.    Okay.

6               A.    I would have used a return on equity in a  
7       calculation, but I believe there would have been  
8       another witness.

9               Q.    Do you know where the 10.5 originated? I  
10       don't mean the case but the actual number originated  
11       from.

12              A.    I believe it may have been the  
13       Commission's decision to establish that number based  
14       upon probably the testimony of Mr. Caahan, if I  
15       remember correctly. I may be wrong on that, but I  
16       seem to remember that.

17              Q.    If you're wrong, you picked a good  
18       candidate, let me tell you that.

19                     Who made the decision to use that return  
20       on equity in this case?

21              A.    I did.

22              Q.    You did. And why did you pick that  
23       number?

24              A.    Because the Commission had just recently

1 approved it for us.

2 Q. Now, the use of the 10.5 percent return  
3 on equity in that case, and that is approved by the  
4 Commission, to the best of your understanding, that  
5 rate is applied throughout the period that such a  
6 number is used for, there being certain calculations  
7 needed for the Mon Power situation and the numbers  
8 over a period of time, and that's the reason why you  
9 use a return on equity, that number doesn't change  
10 over time, does it, or in that order, the way it's  
11 applied to the AEP situation?

12 A. I believe once the Commission established  
13 that return on equity for the calculations, we are  
14 using it for. We will use that until the Commission  
15 orders another value, yes.

16 Q. It's for the Mon Power case you are  
17 referring to?

18 A. Yes.

19 Q. On line 22 of your testimony there's a  
20 proposal that the weighted average cost of capital,  
21 which includes the use of return on equity, a  
22 proposal that weighted average cost of capital be  
23 updated monthly. Do you see that?

24 A. Yes, I do. I see that, "updated monthly

1 using the then most recent available information."

2 Q. Now, that's different than the use of  
3 10.5 percent in 05-765; is that correct? There's no  
4 monthly updating in that case.

5 A. There is monthly updating. The capital  
6 structure itself is updated monthly. The cost of  
7 data is updated monthly. The return on equity is not  
8 updated monthly, nor are we suggesting it be here.

9 Q. Let me go back a step. Maybe I  
10 misunderstood your previous answers. Are you saying  
11 there are monthly calculations being performed as a  
12 result of 05-765?

13 A. I believe there are, yes.

14 Q. Just a second ago you made some  
15 statement. I'm sorry, I was kind of going in a  
16 different direction. You made a statement what would  
17 change on a monthly basis. Could you repeat that  
18 again? What is that is changing on a monthly basis?

19 A. Certainly. It might be easier to go to  
20 DMR Exhibit 3. In the calculation of weighted  
21 average cost of capital --

22 Q. Which is -- if you could, give reference  
23 to lines and columns.

24 A. Certainly. For example, for Columbus

1 Southern Power Company, the weighted average cost of  
2 capital before tax gross-up is 10.77.

3 Q. Where are you, column?

4 A. Column E, I'm sorry. 7.87, that's before  
5 tax gross-up.

6 Q. That's the weighted. That's the result  
7 of other calculations.

8 A. That's correct.

9 Q. What are the components changing on a  
10 monthly basis?

11 A. The components that would be updated in  
12 the accounting calculation would be the items in  
13 column B, the long-term debt and common equity  
14 balances, and column D, line 1, the cost rate for  
15 long-term debt, and the rest are all flow-through  
16 calculations to derive the 7.87 percent in column E.

17 Q. Just a second ago you said cost rate in  
18 column D. Is that the 5.73 percent?

19 A. That's correct, for CSP.

20 Q. That's the number that would be changing  
21 in column D.

22 A. Yes, that's correct.

23 Q. All right. So you've got a monthly  
24 updating of the weighted average cost of capital, and

1     what purposes -- for what purpose is that calculation  
2     being done monthly? How would that change matters?  
3     Would that change the rates? Would that change the  
4     amounts deferred? What impact does the monthly  
5     calculation have?

6             A.     If you look at DMR Exhibit 2, let's use  
7     Columbus Southern Power, page 4 of 7. In column 2 is  
8     where we use the before tax average weighted course  
9     of capital. That's being applied to the rate base  
10    shown in column 1 to calculate the carrying costs on  
11    capital investment. That is part of the expense  
12    which would be compared to revenues in determining  
13    the over/underrecovery.

14            Q.     Let me walk through that a little more  
15    slowly. I am on DMR Exhibit 2, page 4 of 7.

16            A.     Yes.

17            Q.     We have the before tax weighted average  
18    cost of capital in column 2.

19            A.     Yes.

20            Q.     Now, that number isn't going to change as  
21    a result of monthly updating because you're going --  
22    you've already performed the calculations for the  
23    company's proposal. I mean, it's 10.67 percent all  
24    the way down the line; right? We're not going to

1 redetermine that two years from now. The purpose of  
2 setting the rider, AEP proposes to use 10 point --  
3 let's look a little bit. Why does it change between  
4 2007 and 2008 in that column?

5 A. If we return to DMR Exhibit 3, the reason  
6 for the change between 2007 and 2008 is the effect of  
7 a change in taxes between 2007 and 2008.

8 Q. Okay. Good, I'm glad you noticed that  
9 now. But back to the question, the numbers that are  
10 being changed are changed once because of that change  
11 in tax treatment, but they're not going to change  
12 monthly. You're using a number right here in your  
13 testimony. So doesn't that mean that the monthly  
14 updating is not going to have an effect on what rate  
15 would be in the rider if the Commission approves the  
16 plan? You're not proposing that the rate change  
17 every month, are you?

18 A. We are not proposing the rate would  
19 change every month. The impact again would be under  
20 or overrecovery.

21 Q. That's where the effect would be?

22 A. Yes. Because for purposes of calculating  
23 the over/underrecovery, the company would use the  
24 updated weighted average cost of capital.

1           Q.    Okay. While on the subject of deferral  
2 accounting, what would be the rate applied if the  
3 company overrecovered for the deferral accounting?

4           A.    Maybe I've done it a different place.  
5 The way the rate is applied in DMR Exhibit 2 is just  
6 applied to the actual rate base.

7           Q.    Right. I have moved on to another topic,  
8 which is for purposes of the deferrals and the  
9 recovery. If there's is an overrecovery by the  
10 company, what rate would be applied, to the extent  
11 that you'd know, for essentially the company's  
12 customers' money, because the customers expended  
13 money before the company spent anything. So they're  
14 due a return of their money plus something for the  
15 time value of their money.

16          A.    I do not -- I do not believe the  
17 company's proposal applies a time value of money to  
18 over or underrecovery.

19          Q.    Okay. Is there anything else -- let me  
20 make sure we got the topic wrapped up. Is there  
21 anything else that the monthly updating would affect  
22 other than the amounts in the deferral accounting  
23 proposed by AEP?

24          A.    Specifically you're talking about the

1 monthly updating of the average cost of capital?

2 Q. Yes.

3 A. Other than -- the only place that's used  
4 is in the calculation of the carrying costs as shown  
5 in DMR Exhibit 2, pages 4 and 7.

6 Q. I think we are back to the problem we had  
7 a moment ago. DMR page 4 of 7 has a flat rate.  
8 That's not varying monthly. That's something that  
9 will happen in the future. So I was asking what the  
10 effect of the monthly updating would be, not what the  
11 effect of having a particular weighted average cost  
12 of capital was. Do you see what I mean? It's the  
13 monthly updating part as opposed to keeping it fixed  
14 over time. That's what I'm asking. What impact  
15 would it have?

16 A. I guess what I was trying to convey was  
17 the calculations would be performed just as they are  
18 in DMR Exhibit 2 except with monthly updated values.

19 Q. I understand that.

20 What is recent rate of return for  
21 Columbus Southern and Ohio Power?

22 A. I don't know off the top of my head.

23 Q. Okay. On the top -- we're page 7, the  
24 top, we have had a couple of discussions concerning

1 the deferral accounting that you described. What  
2 examples can you give of situations where this type  
3 of accounting is being used for distribution rate  
4 recovery? And I mean in Ohio or elsewhere in your  
5 experience.

6 A. I apologize.

7 Q. Maybe we can break it down a little. Is  
8 it the way the ratemaking or distribution rates, for  
9 instance, for the rates of Columbus Southern Power  
10 and Ohio Power are collecting right now? That's not  
11 the way that ratemaking takes place; right? There's  
12 no deferral accounting, monthly updating, or any of  
13 the rest of this for AEP's current distribution rates  
14 in Ohio, is there?

15 A. There's definitely deferral accounting  
16 related to our regulatory assets.

17 Q. What regulatory assets are those?

18 A. The one --

19 Q. In Mon Power?

20 A. No. Traditional regulatory assets  
21 established by the Commission pre-unbundling and set  
22 up in the ETP cases.

23 Q. So those are matters that are taken care  
24 of in the regulatory transition charge as a result of

1 AEP's electric transition plan.

2 A. That's correct.

3 Q. Okay. And that's a fairly exceptional  
4 proceeding, kind of almost pretty much a one-time  
5 event. Is there anything on a more continual basis?

6 A. A few other examples that I can think of  
7 in Ohio specifically, one example would be the  
8 company's -- it's related to transmission,  
9 transmission cost recovery riders also follow  
10 over/underrecovery accounting.

11 Q. I won't bother to go back and have my  
12 question reread. I am focusing on distribution  
13 rates.

14 A. Okay. I guess the Mon Power litigation  
15 termination rider is also a deferral being recovered  
16 or a -- I believe also the power acquisition rider is  
17 also for Mon Power. There is also over/underrecovery  
18 tracking for that as well. Effectively the storm  
19 recovery, there's tracking on the recovery of that.  
20 I'm not sure if that's a comprehensive list, but  
21 that's all that come to mind.

22 Q. Okay. Is AEP requesting a change for its  
23 regulatory accounting in this case?

24 A. I guess to the extent we're asking the

1 Commission to approve the over/underrecovery  
2 treatment, I mean, we're asking for that.

3 MR. SMALL: Let's go off the record for a  
4 second.

5 (Discussion off record.)

6 Q. (By Mr. Small) Let's go back to DMR  
7 Exhibit 1. We already had some discussion in terms  
8 of the load forecast. I'm looking at the load growth  
9 column in the very last table that's entitled End Use  
10 Delivery Forecast. Do you know what the bump is in  
11 sort of the increase in the load growth for 2008? Do  
12 you know what the source of that is?

13 A. No, I do not.

14 Q. You just accepted the numbers from the  
15 Long-Term Forecast Report submitted in 2006 and those  
16 numbers come from there; is that correct?

17 A. Yes.

18 Q. Okay. If you could turn to DMR  
19 Exhibit 2, pages 3 and 6, and 3 and 6 are analogous.  
20 One is for Columbus Southern and the other for Ohio  
21 Power, so I think the answer would be the same for  
22 both.

23 If you could look at -- they don't have  
24 letters, but there's a column titled Net Plant

1 Investment, and the explanation is that it equals  
2 column 1 minus column 3. Do you see that?

3 A. Yes, I do.

4 Q. How is the net plan investment in column  
5 4 calculated? How do you arrive at those numbers?

6 A. It is simply the difference between the  
7 cumulative growth plan investment and accumulated  
8 book appreciation.

9 Q. That's the explanation of that 4 equals 1  
10 minus 3. How is column 1 arrived at?

11 A. Column 1 is based upon the values from  
12 DMR Exhibit 2 under the section titled Capital  
13 Investment --

14 Q. I'm sorry. We have to have the page.

15 A. DMR Exhibit 2, page 1, under the section  
16 entitled Capital Investment, the second table --

17 Q. All right. Am I correct what you are  
18 saying, if we totaled the numbers for 2007 and  
19 totaled the numbers for 2008, we would have the  
20 numbers on page 1 of 7, the totals?

21 A. Not exactly.

22 Q. Maybe you could explain that.

23 A. Since this is investment, if you looked  
24 at the ending investment in 2007 on page 3,

1 December of 2007 --

2 Q. 13.848 million.

3 A. Yes. This ties to values on DMR  
4 Exhibit 2, page 1 on the second table under Capital  
5 Investment for the line labeled Columbus Southern  
6 Power, the column labeled 2007 of 13 million 848.

7 Q. Okay.

8 A. Similarly --

9 Q. Let's take that a little bit at a time.  
10 Similarly you were going to talk about Ohio Power?

11 A. No. I was going to do the 2008 number.

12 Q. Go ahead and do the 2008 number.

13 A. Similarly, the ending balance for -- at  
14 the end of 2008 at DMR Exhibit 2, page 3, column 1 is  
15 43 million 120, and that's shown in the total column  
16 on DMR 2, page 1, the second section under Capital  
17 Investment, Columbus Southern Power.

18 So in 2007 there's 13 million 848 of  
19 investment spread equally across the six months. In  
20 2008 that's \$29,272,000 of investment spread equally  
21 over the 12 months to get to balance of \$43,120,000.

22 Q. And I'm following you only to a degree.  
23 The numbers on page 3 are monthly values; is that  
24 correct?

1           A.    Yes, that's correct.

2           Q.    And the values on page 1, those aren't  
3 monthly numbers, are they?

4           A.    The values on page 1 under the Capital  
5 Investment are the total spent for year for '07 and  
6 total spent for year for '08.

7           Q.    I'm a little bit confused. We have  
8 \$13,848,000 on page 3, which is a monthly figure;  
9 right?

10          A.    Yes.

11          Q.    And we've got the same figure,  
12 13,848,000, in the middle of page 1, and that's an  
13 annual figure.

14          A.    I think to be technically precise, it's a  
15 semiannual figure. The issue really -- I understand  
16 your confusion. You're thinking in terms of O&M.

17          Q.    Okay.

18          A.    This is capital investment that I vest  
19 13 million during the year.

20          Q.    Okay. I understand that. But the 2007,  
21 I guess my problem is page 1 doesn't explain that as  
22 being the accumulation by the end of the year, which  
23 is what it appears to be on page 3. Is that what the  
24 number is, the accumulated capital investment, gross

1 plant investment by the end of the year? Is that how  
2 I should be reading page 1?

3 A. Yes and no. Page 1, let's stay with the  
4 numbers we have been using, Columbus Southern Power,  
5 13,484,000. That is the amount of capital invested  
6 in '07 and also would be the balance at the end of  
7 the year.

8 For 2008 that 29,272,000 is the amount of  
9 capital invested in '08, but the total balance at the  
10 end of year would be 13 million 848 plus the  
11 19 million 272 to get you to the 43,120.

12 Q. Okay. So I wouldn't read page 1 of 7 as  
13 being some kind of average over the year. What we  
14 are trying to determine is what those columns mean.  
15 That's not an average or something; that's  
16 expenditures over that year. It's not an average  
17 balance or something; it's the accumulated  
18 expenditures by the end of the year.

19 A. It's the investment made during the year.

20 Q. Just to make sure we're clear about this,  
21 the numbers that we just discussed are going to be  
22 part of this revision you're going to provide to the  
23 parties; right? That number we just discussed is  
24 going to change slightly.

1           A.    Yes.  It will change slightly.

2           Q.    All right.  Now, going from the  
3 correspondence between the numbers, where did the  
4 values come from?  What was your source information  
5 for the gross plan investment?  First of all, you  
6 made an assumption of even expenditures on a monthly  
7 basis; that's correct, right?

8           A.    Within a plan year, yes.

9           Q.    Within a plan year, okay.  So the numbers  
10 are partly coming from this assumption of even  
11 expenditures.  Now, where did the totals come from  
12 for the plan year?

13          A.    From the plan document, chart 28D,  
14 page 51.

15          Q.    28D, page 51, and this is where we  
16 discussed -- all right.  This is making sense to me a  
17 little bit.  This is where we discussed the lack of  
18 correspondence with some of the numbers and now  
19 they're going to correspond with one another.  Maybe  
20 that was part of my confusion here when I was getting  
21 started.  Okay, I think I have that.

22                  Now, you say that these numbers are  
23 coming from chart 28D as part of the plan, and you  
24 identified that the base reliability inflation column

1 was one that you provided with input from Mr. Jensen;  
2 is that correct?

3 A. Actually, it's a row, but yes.

4 Q. It's a row. Whatever I said, I meant  
5 row. So that row. Where did the other row come  
6 from? It says Incremental Subtotals for Forecasted  
7 Expenditures. Where did those numbers come from?  
8 The response may be as simple as someone gave them to  
9 you.

10 A. I presume from the other witnesses.

11 Q. You didn't have anything to do with  
12 creating those numbers.

13 A. No, I did not.

14 Q. You took those as inputs to your task and  
15 that's all you know about those numbers; is that  
16 correct?

17 A. Pretty much, yes.

18 Q. You don't have any source documents or  
19 know how this was calculated or anything like that.

20 A. No, I do not.

21 Q. Who would be the witness that would be  
22 responsible for explaining that as part of the plan?

23 A. I'm not sure. I would presume it would  
24 be several of them probably.

1 Q. Want to make a stab at it?

2 A. Not really. I presume that each of the  
3 programs, that different witnesses may have supported  
4 each of the programs that make that up.

5 Q. Because it's a summary, you're saying  
6 there might be different witnesses familiar with  
7 parts of the plan.

8 A. Yes.

9 Q. Whoever put together all those parts  
10 would be ultimately responsible for contributing to  
11 that summary data.

12 A. Say that last part again? I'm sorry.

13 Q. This is a summary table.

14 A. Yes.

15 Q. There are other tables that probably  
16 total to this, so people who would be involved in  
17 developing those other numbers would be responsible  
18 for really developing the row we just discussed, the  
19 incremental subtotal.

20 A. Yes.

21 Q. Let's go to DMR Exhibit 2, 4 of 7. This  
22 is 4 of 7, and this is Columbus Southern Power, and  
23 for Ohio Power I assume your answer would be the  
24 same. How are the O&M expenses in column 4

1 determined?

2 A. Those come from DMR Exhibit 2, page 1.  
3 The bottom half of that page is labeled O&M Expense.  
4 What is shown there is first taking the plan one year  
5 dollars and splitting it between year 1 and year 2 --  
6 2007 and 2008 -- I'm sorry. Taking the plan 2 year  
7 dollars and splitting it between 2008 and 2009, and  
8 once we have the dollars for 2008, 2007 and 2008,  
9 then allocating them between Columbus Southern Power  
10 and Ohio Power. For example --

11 Q. Let me give you an example because I only  
12 have limited numbers here. If I take the numbers at  
13 the top for 2007, looking at page 4 of 7, O&M, month  
14 7 through 12 for Columbus Southern Power, it's about  
15 \$1.3 million per month. Do you see that?

16 A. Yes.

17 Q. And if I added those to the approximately  
18 \$1.9 million and column 4, page 7 of 7, for Ohio  
19 Power -- maybe I shouldn't be doing that.

20 Let me give you another example. If I  
21 totaled the numbers for O&M, column 4 for months 7  
22 through 12 on page 4 of 7, that comes to about  
23 \$8 million. Is there a number -- whatever that  
24 totals to, is there a corresponding number on page 1

1 of 7?

2 A. Yes.

3 Q. Where is that?

4 A. It's under the second table under O&M  
5 Expense, the row labeled Columbus Southern Power,  
6 column labeled 2007, \$7,670,000.

7 Q. I'll take credit for being pretty close  
8 on my estimation.

9 Now, going back to page 1 of 7, can you  
10 trace the O&M expense values on page 1 of 7 back to  
11 the plan, numbers in the plan? Or can you take it  
12 back to the plan?

13 A. Sure. If you go to chart 28D, page 51.

14 Q. I'll be happy for you to give an example  
15 here, and we'll probably get the idea.

16 A. Under the column labeled Year One, O&M,  
17 at the very bottom of the row labeled Total Request,  
18 38,350,000, that should match DMR Exhibit 2, page 1  
19 under O&M Expense, the first table.

20 Q. For year one?

21 A. Plan year one, yes.

22 Q. \$38.35 million?

23 A. Yes.

24 Q. Just to recap things, you are not

1 responsible for that number other than the base  
2 reliability inflation factor; is that correct?

3 Otherwise, there were numbers given to you.

4 A. Yes. Yes. The base reliability,  
5 obviously, was based on some information from  
6 Mr. Jensen as well.

7 Q. Right. I have a staff request No. 3,  
8 which I'll give you in just a second --

9 MR. NOURSE: First set?

10 MS. HARDIE: I think the third set  
11 consisted of just one question.

12 Q. Did you participate in responding to any  
13 of the staff data requests?

14 A. I don't believe so. I may be mistaken,  
15 but I don't believe so.

16 Q. I will hand you the company's response to  
17 the staff's --

18 MR. NOURSE: Just a second.

19 MR. SMALL: We have another copy.

20 MR. NOURSE: I have it right here. I  
21 just want to make sure it's is same as I have.

22 Q. Turn to the second page of the materials  
23 I handed to you, stapled -- page 2 is the beginning  
24 of the company's response. If you go to under

1 methodology, see the term "methodology"?

2 A. Yes, I do.

3 Q. And if you go to the third line on that,  
4 you will see the word "total base." In the context  
5 it says, "the total base plus incremental spend" --  
6 probably should be "spent" rather than "spend," but  
7 anyway, see the reference to total base?

8 A. I see the words on the page.

9 Q. Is your understanding that that's the  
10 same thing as the reference to base reliability  
11 expenditures in the plan?

12 A. I've read the notes. Can you repeat the  
13 question?

14 Q. Total base, is that the same reference to  
15 base reliability expenditures?

16 A. I may be misreading these words, but I'm  
17 not sure the "total" and "base" words go together, if  
18 I'm reading this correctly. "Will be determined by  
19 subtracting from the total" -- it appears to me you  
20 would have parentheses -- "base plus incremental  
21 spend."

22 Q. You are saying the word "total" is not  
23 total base, but the word "total," which is equal to  
24 the base plus incremental.

1           A.    That's the way I read it.

2           Q.    It doesn't read very well, does it?  You  
3   can see my difficulty here.  I guess I'm having a lot  
4   of trouble reading this thing.

5                   Do you understand the term "agreed upon"  
6   in that same sentence, what the words "agreed upon"  
7   mean?  Agreed by who?

8           A.    My interpretation would be whatever the  
9   Commission approves.

10          Q.    Orders?

11          A.    Or orders.

12               MR. SMALL:  Let's go off the record for a  
13   second.

14                   (Discussion off record.)

15          Q.    (By Mr. Small) Let's go to the plan.  Do  
16   you have that in front of you?

17          A.    Yes, I do.

18          Q.    I'll start out with page 10 -- I'm sorry,  
19   chart 10 that's located on page 23 of the plan.  This  
20   table, the numbers in the table are partially  
21   explained by year 1 of ramp-up period, but let's take  
22   this a little bit at a time.  You said that you were  
23   responsible for certain inflation calculations;  
24   correct?

1           A.    The calculations shown on DMR Exhibit 1.

2           Q.    Right. Which you said were also the  
3 numbers that were in 28D.

4           A.    That's correct.

5           Q.    My question is now going to relate to the  
6 plan. At least with respect to chart 28B, you were  
7 responsible for some of those numbers. We  
8 established that; right?

9           A.    Yes, we established I was responsible.

10          Q.    Now I'm going back into some of the  
11 pieces parts and the numbers that feed into the  
12 summary table. Let's take an example here. On chart  
13 10 at the bottom row for year 2, there's a number  
14 \$24.79 million. Do you see that?

15          A.    I see that.

16          Q.    And then if we go to year 3, we see  
17 26.16 million in that same row. Do you see that?

18          A.    Yes, I see that.

19          Q.    When we go from 24.79 million to  
20 26.16 million, how do we get there? Is that the  
21 application of the inflation assumption you talked  
22 about that's increasing the number from 24.7 million  
23 to 26.16?

24          A.    I don't know.

1           Q.    You don't know because you didn't have  
2 any contribution in preparing the inputs into chart  
3 10.

4           A.    That's correct.

5           Q.    If I asked you the same questions for all  
6 the charts that were leading up to chart 28D where  
7 you did have some input, your answer would be the  
8 same, that you didn't have any input into any of  
9 these tables?

10          A.    That's correct.

11          Q.    And you're not responsible for it, and  
12 you didn't prepare any of the calculations.

13          A.    No, I did not.

14          Q.    Including the ones having to do with  
15 inflation. If the inflation is used there, it's by  
16 somebody else.

17          A.    It's entirely possible that Mr. Jensen  
18 gave these numbers to other people.

19          Q.    All right.

20               MR. SMALL: Let's go off the record for a  
21 second.

22               (Discussion off record.)

23          Q.    (By Mr. Small) Mr. Roush, the OCC made  
24 inquiries into the self-complaint, the actual

1 complaint filed at the Commission earlier in its  
2 discovery, and, in particular, asked questions about  
3 the individual expenditures on capital projects that  
4 were listed in the self-complaint, and that would be  
5 for the stipulation period 2004 through 2005. You're  
6 familiar with the stipulation signed by AEP with the  
7 staff?

8 A. Just generally.

9 Q. Okay.

10 A. Very generally.

11 Q. And you realize there are statements  
12 throughout the AEP's case about expenditures during  
13 that two-year period.

14 A. (No response.)

15 Q. You're not familiar with it?

16 A. Well, you know, I know there was a  
17 specific citation that we were discussing earlier.

18 Q. For instance, on chart 27 we discussed  
19 that earlier.

20 A. Yes.

21 Q. We tried to define what "base" meant.  
22 You understood that to be the stipulation that  
23 covered the years 2004 and 2005.

24 A. Yes. In chart 27, yes.

1           Q.    Okay.  In response to our  
2   interrogatories, we received a response 71 through  
3   74 that related to those expenditures during that  
4   period.  I'm going to hand the two of you, I don't  
5   expect you to go through the numbers one by one.  
6   It's a large document.

7                   In terms of this accrual accounting that  
8   you mentioned in your testimony, how is AEP going to  
9   track the expenditures from an accounting standpoint?  
10   The reason why I gave you the answers to  
11   interrogatories 71 through 74, that appears to be the  
12   response of the company's tracking of its past  
13   expenditures.  Do you have an understanding of that  
14   tracking system?

15           A.    Not really in any depth at all.

16           Q.    You didn't participate in responding to  
17   that request for production?

18           A.    Not at all.

19           Q.    Okay.  So do you understand how the  
20   accrual will takes place as far as the calculations  
21   are concerned?  You just have -- or do you have no  
22   familiarity with the system of recording the actual  
23   capital expenditures, for instance?

24           A.    My responsibilities don't really get into

1 the depth of the actual journal entries and that kind  
2 of detail, more the higher level conceptual.

3 Q. What do you mean by higher level? Are  
4 you referring to higher level, you'd understand the  
5 accounting at a higher level, or are you talking  
6 about you're one step above that, and you're just  
7 taking the results that the accounting people would  
8 give you?

9 A. I mean, I think we've had a -- say that  
10 one more time, please.

11 Q. Okay. The question is -- I think I  
12 understand your answer. You said you didn't get into  
13 the entries. I don't want to get too much into  
14 minutia here. I want to make sure by you saying you  
15 don't do the entries, I'm not talking number by  
16 number, but do you have an understanding of the  
17 tracking system that AEP has, even if you're not  
18 doing individual entries?

19 A. The tracking system for reliability  
20 expenditures?

21 Q. And for the capital expenditures.

22 A. My understanding basically is the level  
23 that one exists and that we follow FERC uniform  
24 system of accounts.

1 MR. SMALL: Just a moment.

2 That completes my examination, thank you  
3 very much, and I believe Mr. Neilsen has additional  
4 questions for you.

5

- - -

6

EXAMINATION

7

By Mr. Neilsen:

8

Q. Good afternoon, Mr. Roush.

9

A. Good often, Mr. Neilsen.

10

Q. Well, you have my name so I don't have to  
11 repeat that for you. I'm representing Industrial  
12 Energy Users-Ohio or IEU-Ohio, and I just have a few  
13 questions for you.

14

The first one deals with AEP's response  
15 to OCC's request for production of documents 8-93.  
16 If you have that, let me know, please.

17

A. I do not have that.

18

MR. SMALL: Do you have copies, Dan?

19

MR. NEILSEN: I do not.

20

MR. SMALL: Here you go. I have one for  
21 him.

22

Q. Would you look at that and let me know if  
23 that is what you believe to be the response to that  
24 interrogatory? Have you seen that before?

1           A.    I do not believe I have read this  
2 document before.

3           Q.    Okay.  We will not discuss this then.  I  
4 think it looks like this belongs to somebody else.

5                   Earlier we were discussing OCC, the  
6 response to OCC request for production of documents  
7 8-92.  You do have that one.

8           A.    Yes, sir, I have that one.

9           Q.    It was a topic of discussion earlier.  
10 When you get that, let me know, please.

11          A.    I have it in front of me.

12          Q.    Could you turn to page 3 of 16, please?

13          A.    Yes, sir.

14          Q.    All right.  About the center of the page  
15 there, just underneath the section that says Total  
16 Distribution Revenue, underneath that says "plus 2005  
17 Aluminum."  Do you see that?

18          A.    Yes.

19          Q.    Can you tell me what that represents, the  
20 2005 Aluminum?

21          A.    Yes, sir.  That line item was placed in  
22 there so we could tie back to the total company  
23 numbers for Ohio Power.  The 2005 Aluminum reflects a  
24 customer of Ohio Power that is no longer taking

1 service from Ohio Power.

2 Q. Okay. Turn to page 5 of 16, please.

3 A. Yes, sir.

4 Q. Okay. The chart provided there, it shows  
5 AR sold to AEP Credit. Does AR means accounts  
6 receivable?

7 A. Yes, sir.

8 Q. And does Columbus Southern Power and Ohio  
9 Power sell all of their accounts receivable to AEP  
10 Credit?

11 A. I'm not sure I can say they sell all of  
12 their accounts receivable. There may be an issue  
13 around PIPP customers, but I'm not certain.

14 Q. Okay. Would you believe that would  
15 include all revenues except possibly PIPP?

16 A. I believe so, but I'm not certain.

17 Q. By PIPP, you mean Percentage of Income  
18 Payment Plan.

19 A. I believe so, but I'm not certain.

20 Q. Okay. My next one refers to OCC's  
21 interrogatory request No. 302 of the ninth set. Do  
22 you have that?

23 A. I do not have that one.

24 Q. I have one for you. I will show it to

1 you and counsel. Are you familiar with the  
2 interrogatory and the response to that interrogatory?

3 A. I have read it now.

4 Q. Okay. All right. For the good of the  
5 rest of parties here, that states that: The company  
6 anticipates that the reliability cost recovery rider  
7 would continue to be billed and the company would  
8 continue to practice under and overrecovery deferral  
9 accounting.

10 Can you tell me under what circumstances  
11 the companies would decide to undergo a distribution  
12 rate proceeding before the Commission?

13 A. I guess there are a number of scenarios.  
14 The obvious one is if the companies view that their  
15 revenues are insufficient to meet their costs and pay  
16 an adequate return to their shareholders.

17 Another situation may be if the  
18 Commission required us to come in for review. Those  
19 are the two obvious reasons that come to mind.

20 Q. Okay. If you could turn to page 44 of  
21 the plan, please.

22 A. I'm on that page.

23 Q. Okay. At the top of that page, the  
24 companies indicate that 235 distribution stations

1 currently have supervisory control and data  
2 acquisition, otherwise known as SCADA equipment or  
3 capabilities.

4 Can you tell me to what account the  
5 companies have accorded the cost of implementing the  
6 SCADA equipment for these facilities? I'm sorry, it  
7 says 234 stations in the center of that page, page 4.

8 A. Off the top of my head, I can't tell you  
9 what account those SCADA go to.

10 Q. Could you tell me who you think might  
11 know?

12 A. I'm sorry, I lost the page. What page  
13 were we on?

14 Q. That was page 44.

15 A. Thank you. I believe it might be  
16 Mr. Jensen.

17 MR. NEILSEN: Okay. Thank you. That's  
18 all I have.

19 THE WITNESS: Thank you.

20 MR. SMALL: As far as I know, we're done.

21 (Signature not waived.)

22 (Thereupon, the deposition concluded at  
23 4:12 p.m.)
