SECTION 8 - INTRALATA TOLL SERVICE

8.1 General

8.1.1 Description

IntraLATA toll service is furnished for telephone communication between telephones in different local calling areas within the originating LATA in accordance with the regulations and schedules of charges specified in this Tariff. Except as otherwise provided in this Tariff, the toll service charges specified in this Section are in payment for all service furnished between the calling and called telephone.

IntraLATA toll calling includes the following types of calls: direct dialed, calling card, collect, third number billed, special toll billing, requests to notify of time and charges, person-to-person calling and other station-to-station calls.

8.1.2 Classes of Calls

Service is offered as two classes: station to station calling and person-to-person calling.

- A. Station to Station Service is that service where the person originating the call dials the telephone number desired or gives the Company operator the telephone number of the desired telephone station or system.
- B. Person-to-Person Service is that service where the person originating the call specifies to the Company operator a particular person to be reached, a particular mobile unit to be reached, or a particular station, department or office to be reached. The call remains a person-to-person call when, after the telephone, mobile telephone, or PBX system has been reached and while the connection remains established, the person originating the call requests or agrees to talk to any person other than the person specified, or to any other agreed upon alternate.

8.2 Timing of Calls

- 8.2.1 Unless otherwise indicated, all calls are timed in one minute increments and all calls which are fractions of a minute are rounded up to the next whole minute.
- 8.2.2 For station-to-station calls, call timing begins when a connection is established between the calling telephone and the called telephone station.
- 8.2.3 For person-to-person calls, call timing begins when connection is established between the calling person and the particular person, station or mobile unit specified or an agreed alternate.
- 8.2.4 Call timing ends when the calling station "hangs up," thereby releasing the network connection. If the called station "hangs up" but the calling station does not, chargeable time ends when the network connection is released either by automatic timing equipment in the telephone network or by the Company operator.
- 8.2.5 Calls originating in one time period (as defined in Section 8.3) and terminating in another will be billed the rates in effect at the beginning of each minute.
