SECTION 3 - DESCRIPTION OF SERVICE, CONT.**3.4 Calculation of Distance**

For services which are distance sensitive, usage charges are based on the airline distance between the serving wire center locations associated with the originating and terminating points of the call.

The distance between the originating and terminating points is calculated by using the "V" and "H" coordinates of the serving wire centers as defined by BellCore (Bell Communications Research), in the following manner:

- Step 1: Obtain the "V" and "H" coordinates for the serving wire center of the Customer's switch and the destination point.
- Step 2: Obtain the difference between the "V" coordinates of each of the serving wire centers. Obtain the difference between the "H" coordinates.
- Step 3: Square the differences obtained in Step 2.
- Step 4: Add the squares of the "V" difference and "H" difference obtained in Step 3.
- Step 5: Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.
- Step 6: Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the originating and terminating serving wire centers of the call.

Formula:

$$\sqrt{\frac{(V - V)^2 + (H - H)^2}{10}}$$

SECTION 3 - DESCRIPTION OF SERVICE, CONT.**3.5 Messages Placed by Hearing and/or Speech Impaired Persons**

For purposes of this Tariff, the definition of impaired refers to those persons with communication impediments, including those hearing impaired, deaf, deaf/blind, or speech impaired persons who have an impairment that prevents them from communicating over the telephone without the aid of a telecommunications device for the deaf ("TDD").

Additionally, TDD lines maintained by non-profit organizations and governmental agencies, upon written application and verification that such lines are maintained for the benefit of the impaired, are eligible to receive a discount off message toll service rates.

Upon receipt of the appropriate application, certification, or verification, intrastate toll message rates for TDD users shall be evening rates for daytime calls and night rates for evening and night calls.

Message toll service calls placed through the Telephone Relay Service ("TRS") are eligible to receive a discount off the message toll service rates. For intrastate toll calls received from the relay service, each local exchange and interexchange telecommunications company billing relay call will be discounted by 50 percent of the applicable rate for a voice non-relay call except that where either the calling or called party indicates that either party is both hearing and visually impaired, the call will be discounted 60 percent off the applicable rate for voice non-relay calls. The above discounts apply only to time-sensitive elements of a charge for the call and shall not apply to per call charges such as a credit card surcharge.
