Subject: We Want Cost-Effective Energy Efficiency 10-503-EL-FOR

Sep 14, 2010

Public Utilities Commission

How can I get the word to our leaders and decision makers to read BIG COAL and especially the part regarding the carbon footprint of nuclear energy. The mining and refining process is where the emissions equal or exceed the average of present systems.

Please consider the proposition a resource problem cannot be engineered away. The only hope is conservation and reduction in demand. LED lighting, smart thermostats insulation, and yes sweaters (Thanks President Carter) are the only answer.

Duke Energy is proposing to build an expensive nuclear power facility; yet the company fails to properly estimate the amount of low-cost energy efficiency in Ohio.

Unless and until Duke Energy seriously achieves all economically available energy efficiency and renewable energy, a new, expensive nuclear facility should be completely off limits.

Energy efficiency costs on average 3 cents per kwh; while nuclear energy will cost upwards of 15 cents per kwh; we can't afford to leave any low cost energy efficiency on the table, unutilized.

Please ensure that Duke Energy properly estimates, examines, and captures all the cost effective energy efficiency options available before looking to expensive, new alternatives generation.

I look forward to your reply.

Sincerely,

Dr. Sean Finneran

Subject: Tell Duke No Nuke! We Want Low-Cost Efficiency and Renewables!

Sep 14, 2010

Public Utilities Commission

Docket # 10-503

Ohio utilities rely too heavily on dirty and expensive fossil fuels. Ohio's new law that requires utilities to invest in efficiency and renewables is a step in the right direction - creating jobs, protecting public health, and cleaning our air. But Duke wants to be let off the hook for its efficiency responsibilities and has proposed to build an expensive new nuclear plant instead. Please hold Duke accountable! Ohioans want efficiency and renewables - not a new nuclear plant!

Many market potential studies have proven that it's cost effective for Duke to go well beyond its efficiency requirements, and many renewable technologies are far cheaper than building a nuclear plant. Efficiency and renewables are the most cost effective ways of shielding consumers from high energy costs and protecting the environment.

If Duke is let off the hook for its energy efficiency requirements, every utility in the state may try to follow suit. Please protect all customers and the environment through strong enforcement of SB221.

Sincerely
