In reference to Case # 10-176-EL-ATA

Dear Sirs,

I am writing you in reference to our electric heat rate. I attended a hearing in Strongsville, Ohio, on Wednesday, October 27, 2010. I am enclosing a copy of my current bills and bill records back to 2004. You will see the price of kilowatt has gone from .0678 cents per kilowatt to .103 cents per kilowatt, an 84.8% increase. We look at our usage as going down, using 18.074 in 2004 vs. 13,100 in 2010 a 37.96% decrease in usage, with December not reported. Our price is relatively the same, as a per dollar amount, from 2004 vs. 2010. We used less. As you can see by our work sheet, we are under almost 5000 kilowatts for the year. I am glad to say that we do not have the volume of electric to generate an \$800 to a \$1,000 bill that other customers of First Energy are complaining about.

We are a retired couple living on a fixed income. We bought our house in 1973 and it was all electric with base board heat. Many years ago we went to the expense of putting in an oil furnace as a back up. We only run one heater until the temperature falls below 20 degrees and then we add two more heaters so the water pipes don't freeze. We must sit in our home with "long underwear" a sweater or sweatshirt and light jacket. I sleep with a hat on if the weather gets real cold. We have six blankets on our bed for warmth. When people come to our home they want to know if we are leaving because we have our coat on.

We would appreciate it if you could hold the rates because we don't know how else to manage the expense so that we could afford the electric. We appreciate your concern on the above matter.

Sincerely,

Jerry & Vivian Forgas
