## FOOTNOTES

- ① THESE ASSIGNMENTS APPLY TO MULTIPLEXED COPPER FEEDER PAIRS, ONLY.  
 BY DEFINITION: ITEMS LABELED ~~F(xed)~~ OR SHARED ARE EXCLUDED IN A MARGINAL COST STUDY.  
 ITEMS LABELED ~~F(xed)~~ ARE EXCLUDED FROM ADDITIONS IN INCREMENTAL STUDIES.  
 ALL ITEMS ARE INCLUDED IN A PROSPECTIVE, REPLACEMENT OR NEW INSTALLATION.

CONFIDENTIAL

HELP SCREEN

Bellcore

LCAT Rel. 1.0.4  
ISSUED: 3/31/96

**THIS DISPLAY** This display's data and the data on the subsequent display are a record of this study's criteria and the system's parameters and is the TITLE PAGE of this study. Printouts should accompany the input, worksheets, and results.

**STUDY NAME** Enter in Free Form up to 35 Characters for a Study Title. This data will be inserted in the title box of the title display of each run module.

**COMMENTS** Enter in Free Form (as in a Word Processor) FOUR lines (Word Wrap is active) of Commentary that will help Explain the study criteria and rationale. The space will allow approximately 72 proportionately spaced characters per line, 288 total. To begin just start typing in the data after <Enter>ing the previous item. The character guide will appear after the first character is entered. Data can be edited in the normal WP manner, using the <BS>, <Del>, <Up>, <Dn>, etc... keys. PRESS THE < Enter > KEY TO STOP INPUTTING DATA.

**STUDY BASIS** Select with an "X" either an average NETWORK study or an INDIVIDUAL CASE study.

**FACILITY TYPE** Select by entering the percent of technology mix, the Facility types in the loop network that support the service/s/ under study or enter an "X" to denote inclusion.

**CELL DENSITY** Select by entering the percent of cell density mix, based upon the scope of the jurisdiction and the definitions of the cell layers: C1, C2, C3, C4; which represent the VERY HIGH, HIGH, MEDIUM, LOW qualifiers, such as, METRO, URBAN, SUBURBAN, and RURAL.

\*\*\*\*\* PLEASE REFER TO THE USER MANUAL FOR INFORMATION \*\*\*\*\*  
\*\*\*\*\* CONCERNING ANY OTHER DATA INPUT ITEMS ON THIS DISPLAY \*\*\*\*\*  
PRESS < Enter > KEY TO RETURN TO THE MAIN MENU

INPUT - STUDY SETUP

LCAT Rel. 1.0.4  
ISSUED: 3/31/95

1. Specify **N** for New Installations or **A** for Addition to existing installations are being studied.
2. Specify **S** for the Switched Services or **P** for the Private Line (Special) Service category.
3. Specify **N** for Narrowband (DS0), **W** for Wideband (DS1), or **B** for Broadband Services category.
4. Specify as **2** for 2-wire or **4** for 4-wire, the circuit transmission paths used by the service/s/ being studied.
5. Specify Digital Switch Mix as a Percentage of Installations over Analog in the Jurisdiction.
6. & 7. Specify Integrated DLC Mix as a Percentage of the DLC equipment requirements.  
Using 6. for Switched Services or Using 7. for Special (Private Line) Services.
8. Enter in feet, the loop length beyond which only Digital Loop Carrier Technology will be considered
9. Specify **F** for Flat Rate Loop or **D** for Distance Sensitive Bands, for the Cost Structure of the study
- 9A. Enter **1**, **2**, **3**, or **4** to specify either 1/4, 1/2, 3/4, or 1 mile, respectively, band increments in a Distance Sensitive Study
10. Specify the quantity of Cost Bands of Loop Lengths will be studied, for upto a maximum of 5 bands.  
Enter **0** for Network Averaged (non-Banded) Input or Individual Circuit Flat Rate Cost Studies.
11. Specify **I** for Investment Only results or **C** for resultant Annual and Monthly Recurring Costs or **A** for All values.
12. Specify **T** for Total Incremental or **M** for Marginal (Direct Incremental) Average Weighted Costs Study.
13. Enter the quantity of loop circuits that will be the demand basis of this cost study.  
Nominally, entering 1 provides a "UNIT" cost and any other value, a "TOTAL" cost

INPUT - LOOP\_DESIGN

LCAT Rel :1.0.4

Sheet 1 of 1

Issued :07/31/95

**DIGITAL LOOP  
CARRIER  
DESIGNS**

Each Loop's circuit layout is broken down into potentially the FEEDER, the DISTRIBUTION, and the DROP segment. The FEEDER segment can have THREE Spans, the PRIMARY and EXTENSION are realtime, but, the SUBFEEDER is a "filler" for spans or distances under PAIR GAIN Deployment and will be employed using engineering rules and network characteristics. The potential Fiber Optic DLC and Copper DLC circuit layouts have been categorized into several generic designs for purposes of narrowing down the complexity of the network contribution. The *DESIGN's* represent unique combinations of layers (COLLOCATION) and the transport media. There is a chart of these *DESIGN's* included in the DATA CATALOG and the METHODOLOGY sections of the User Guide.

**COLLOCATIONS**

To be defined as the combining of Loop functions at the same location, excluding the need for translation of the transport function (eliminating the OSP and termination equipment). Note that the sum of the probabilities do not have to equal total universe, therefore, the proportions are a function of the total serving universe (total loop network).

**FIBER HUBS &  
FEEDER  
EXTENSIONS**

These values represent the proportion of each technology used in the layouts which DO NOT have collocated FIBER HUB and REMOTE TERMINAL functions.

**WARNING** → This function must be in place for "RING" topologies as 100% FIBER, therefore, the *DESIGN* choices are limited for RING to *DESIGN's* 1 and 5. All other *DESIGN* are to be avoided.

**SERVICE  
SPECIFIC**

To avoid circuit layout conflict with certain service levels, the input choices will be limited for BROADBAND service levels to those which currently support DS3 Xconn at both ends. Currently, that is, *DESIGN* 4, 5, & 6.

\*\*\*\*\* PLEASE REFER TO THE USER MANUAL FOR INFORMATION \*\*\*\*\*

| <b>NOTE:</b><br>① The value represents the extent to which copper pairs are gained. For example, A 96 Channel System uses 4 Transmit Pairs, 4 Receive Pairs, 2 Protection Pairs and 2 Support Pairs (Test and Order Wire). Then the Derived Pairs would be the Sum of the Pairs divided by the Working Channels Or $(10 + 2) / 96 = 0.125$ . When applied to segment length it becomes the Effective Length per Pair. |                                                                       |                                                                                                                                                         |  |                                                                                                                      |

|          |                                                                                                                                                                      |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| pggauge  | In CSA rules, a single gauge is preferred for CDLC                                                                                                                   |
| vgcheqv  | Each CDLC has a voice grade equivalent, usually referred to as a ____ Channel System. Domestic systems are basic 96 Channel, whereas, International are 120 Channel  |
| xmsnpr   | CDLC uses a Transmit/Receive Pair for each direction (unidirectional), therefore, the basic structure is four sets of two pairs plus one protection set ( 10 pairs ) |
| suptpr   | CDLC is customarily supported by a power pair and an alarm pair ( 2 pair)                                                                                            |
| pgfactor | Where : $pgfactor = ( \# \text{ of } xmsnpr + \# \text{ of } suptpr ) / vgcheqv$                                                                                     |

## HELP INFORMATION

Bellcore<sup>TM</sup>

LCAT Rel : 1.0.4

Issued : 07/31/95

LCAT Commands      Description

This Command will allow the User -

EDIT                      To Enter Values with DIRECT Input on a cell by cell basis.  
 CLEAR                    To Erase the Display's Current Data Values, then Perform DIRECT Input.

Line Items              Description

This Equipment Item Represents -

Ofc Rept Bay              A Wideband Special Service Circuits Requirement, included in other DLC COE LINE.  
 Integrated DLC            The DLC Class for Source Bandwidth from Digital Line Cards or DSX Term for DS1.  
 Universal DLC            The DLC Class for Source Bandwidth from Analog Subs Line Cards or Voice Grade Term.

See Circuit Designs :

HELP SCREEN**Belcore** (R)

LCAT Rel: 1.0.4  
Issued: 3/31/95

## NOTE :

- ① THIS VALUE REPRESENTS GLOBAL (CATEGORY 1) INPUT FOR THESE ITEMS.  
AN ENTRY SETS CATEGORY 2 VALUES TO THE CATEGORY 1 VALUE BY THE SYSTEM.
- ② THE VALUES IN THIS TABLE REPRESENT DETAIL FACTORS (CATEGORY 2 VALUES).  
THESE ITEMS ARE APPLIED IN THE COST EQUATIONS FOR THE COMPONENT THEY IDENTIFY.  
ENTRIES NEGATE CATEGORY 1 VALUES BY THE SYSTEM.
- ③ THE DESIGNATION "CO" DENOTES CENTRAL OFFICE LOCATED.  
THE DESIGNATION "REM" DENOTES REMOTE SITE LOCATED.

\*\*\*\*\* PLEASE REFER TO THE USER MANUAL FOR INFORMATION \*\*\*\*\*

| Copper Cable Conduit Unit Investment   | cucfi | _dst | _fdr | Per unit length of underground copper cable effective pair feet placed.         |
| Fiber Cable Conduit Investment Factor  | fuoff | _dst | _fdr | Based on underground fiber cable investment relationship to conduit investment  |
| Fiber Cable Conduit Unit Investment    | fucfi | _dst | _fdr | Per unit length of underground fiber cable effective pair feet placed.          |

## NOTES

- ① THIS VALUE REPRESENTS GLOBAL (CATEGORY 1) INPUT FOR THESE ITEMS.  
AN ENTRY SETS CATEGORY 2 VALUES TO THE CATEGORY 1 VALUE BY THE SYSTEM.
- ② THE VALUES IN THIS TABLE REPRESENT DETAIL FACTORS (CATEGORY 2 VALUES).  
THESE ITEMS ARE APPLIED IN THE COST EQUATIONS FOR THE COMPONENT THEY IDENTIFY.  
ENTRIES NEGATE CATEGORY 1 VALUES BY THE SYSTEM.

\*\*\*\*\* PLEASE REFER TO THE USER MANUAL FOR INFORMATION \*\*\*\*\*  
\*\*\*\*\* CONCERNING ANY OTHER DATA INPUT ITEMS ON THIS DISPLAY \*\*\*\*\*

## LOOP COST ANALYSIS TOOL

Bellcore (R)

INPUT - PLANT\_CHAR.  
Sheet 1 of 2LOOP FACILITY INPUT  
HELP SCREENLCAT Rel :1.0.4  
Issued : 07/31/95

## AVERAGE NETWORK STUDY -

This mode of LCAT is used where the cost study may be broad in scope and lack sufficient detail data to use the Loop OSP cost calculators on Sheets 2, 3, and 4. Instead, it relies on table data from the FACILITY file, representing jurisdictional average value mixes or proportions. Input for these values is placed on Sheet 1.

## INDIVIDUAL CIRCUIT STUDY -

This mode of LCAT is used to cost study circuit specifics on an individual Circuit Basis for Request For Proposals, Special Constructions, and CENTREX-like Services. Data input is usually actual per the circuit configuration's span by span requirements as detailed by Product Management. This mode will require the use of the Loop OSP calculators on Sheets 2, 3, and 4.

## DATA SAMPLE NETWORK STUDY -

This mode of LCAT functions well with the Loop OSP cost calculators on Sheets 2, 3, and 4. The data samples are inputted on the sheets cumulatively and cost calculated directly. Then the weightings formulae are applied to create an average weighted Loop cost per pair foot.

## BANDWIDTH AVERAGING -

This feature of LCAT permits study level weighting of fiber multiplexer bandwidth transport. The range of multiplexers goes from 1.5 Mbps through 1.7 Gbps and designating the mix of usage develops a more precise unit investment to the feeder calculations.

**RULES**

**ASSUMPTION** - Table LOOKUP will select from the lower NOM RANGE of a CUR LPLGTH intermediate value

IF CUR\_LPLGTH is

- = < DISTSPAN, then CUR\_SEGLGTH<sup>cur</sup> Equals CUR LPLGTH - NOM\_RANGE difference
- > DISTSPAN and < DLCDEPL, then CUR\_SEGLGTH<sup>stat</sup> Equals CUR LPLGTH - NOM\_RANGE difference
- = > DLCDEPL, then CUR\_SEGLGTH<sup>prior</sup> Equals CUR LPLGTH - NOM\_RANGE difference

**CUR\_SEGLGTH** - Calculation Assumptions

The DISTSPAN can not exceed the DLCDEPL value input on CRITERIA.

Therefore, set the DLCDEPL at the DISTSPAN to get an ALL FIBER Network.

OUTPUT - WORKSHEET D  
SHEET 5 of 10**LOOP COST ANALYSIS TOOL**  
PROSPECTIVE INVESTMENT WORKSHEET SUMMARY

Bellcore

LCAT Rel: 1.0.4  
Issued: 7/31/95COMPANY: CINCINNATI BELL TEL  
CITY / AREA: CINCINNATI  
STATE / PROV: OHIO  
JOB IDENT: CINCINNATICIRCUIT DESIGN: 2 FOMUX  
LOOP SPAN DIVISION: ALL LOOP SPANS  
SERVICE CLASS: BAND 3 - RESIDENCE LIN  
TOTAL LOOP LENGTH: 6825 FEETSTUDY YR: 1996  
TEST CASE: 1  
RUN DATE: 27-Jan-97  
TIME: 08:49

Circuit Design Mix: 0.0000 UNIT MONTHLY RECURRING COSTS BY ACCOUNT FOR A 0 BAND STUDY
