Re: Case No. 11-974-EL-FAC
11-975-EL-RDR

Dear Docketing Division:

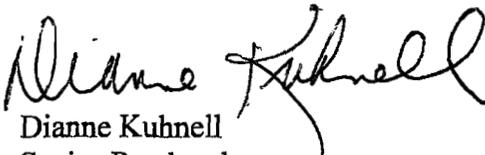

Enclosed please find for filing an original and twelve copies of the *Application to Approve the Fuel Economy Purchased Power Component and the System Reliability Tracker Component; Duke Energy Ohio, Inc.'s Motion for Protective Order; Direct Testimony of Gregory H. Cecil and Direct Testimony of William Don Wathen, Jr.*

We are also enclosing an envelope containing the confidential material to be filed under seal as referenced in the Motion.

Please file-stamp and return two copies of each of the above in the envelope provided.

Should you have any questions, please contact me at (513) 287-4337.

Very truly yours,

Dianne Kuhnell
Senior Paralegal

WDW-1 Rider FPP Quarterly Filings for the Period January 2011 through December 2011

CONFIDENTIAL WDW-2 RIDER SRT Quarterly Filings for the Period January 2011 through December 2011

I. INTRODUCTION

1 **Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

2 A. My name is William Don Wathen Jr. My business address is 139 East Fourth
3 Street, Cincinnati, Ohio 45202.

4 **Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

5 A. I am employed by Duke Energy Corporation (Duke Energy), Duke Energy
6 Business Services (DEBS) as Vice President Rates, Ohio and Kentucky.

7 **Q. PLEASE SUMMARIZE YOUR EDUCATION AND PROFESSIONAL
8 QUALIFICATIONS.**

9 A. I received Bachelor Degrees in Business and Chemical Engineering, and a Master
10 of Business Administration Degree, all from the University of Kentucky. After
11 completing graduate studies, I was employed by Kentucky Utilities Company as a
12 planning analyst. In 1989, I began employment with the Indiana Utility
13 Regulatory Commission as a senior engineer. From 1992 until mid-1998, I was
14 employed by SVBK Consulting Group, where I held several positions as a
15 consultant focusing principally on utility rate matters. I was hired by Cinergy
16 Services, Inc., in 1998, as an Economic and Financial Specialist in the Budgets
17 and Forecasts Department. In 1999, I was promoted to the position of Manager,
18 Financial Forecasts. In August 2003, I was named Director of Revenue
19 requirements in the Rates Department where I had responsibility for preparing
20 financial and accounting data used in the wholesale and retail rate filings for Duke
21 Energy Ohio, Inc. (Duke Energy Ohio or the Company) and Duke Energy
22 Kentucky, Inc., and for changes in fuel and gas cost adjustment clauses. In

1 December 2009, I was named to my current position, Vice President Rates Ohio
2 and Kentucky.

3 **Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THIS COMMISSION?**

4 A. Yes. I have previously testified in several cases before the Public Utilities
5 Commission of Ohio (Commission).

6 **Q. PLEASE SUMMARIZE YOUR DUTIES AS VICE PRESIDENT RATES,
7 OHIO AND KENTUCKY.**

8 A. As Vice President, Rates, I am responsible for all state and federal regulated rate
9 matters involving Duke Energy Ohio and Duke Energy Kentucky, Inc.

10 **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

11 A. I will describe the mechanism for calculating Duke Energy Ohio's price-to-
12 compare - fuel and purchased power (Rider PTC-FPP) and will support the filings
13 made relating to Rider PTC-FPP charges for the period of January 1, 2011,
14 through December 31, 2011.

15 Next, I will describe the mechanism for calculating Duke Energy Ohio's
16 system resource adjustment - system reliability tracker (Rider SRA-SRT), support
17 the filings made relating to Rider SRA-SRT charges for the period of January 1,
18 2011, through December 31, 2011.

19 I also discuss the Company's compliance and satisfaction of five of the
20 commitments arising out of the Stipulation and Recommendation reached in Case
21 No. 10-974-EL-FAC, *et al.*, resolving the audit of the Company's PTC-FPP and
22 SRA-SRT for calendar year 2010.

1 Finally, I will discuss the impact on both riders as a result of the
2 Company's new electric security plan (ESP) approved on November 22, 2011, in
3 Case No. 11-3549-EL-SSO, *et al.*

II. OVERVIEW OF RIDER PTC-FPP CALCULATION

4 **Q. PLEASE DESCRIBE RIDER PTC-FPP.**

5 A. Rider PTC-FPP was a component of the Company's standard service offer (SSO)
6 approved in its Electric Security Plan (ESP) in Case No. 08-920-EL-SSO. Rider
7 PTC-FPP provided the Company with recovery of the cost for fuel and economy
8 purchased power, the cost of purchasing emission allowances (EAs) such as SO₂
9 and NO_x, the cost for environmental reagents (ERs) and the cost of renewable
10 energy certificates (RECs) required to meet Ohio's renewable portfolio standard.
11 Full recovery was limited to eligible costs that were allocated to its standard
12 service offer (*i.e.*, non-switched native load) customers.

13 **Q. PLEASE DESCRIBE THE METHODOLOGY THAT WAS USED FOR**
14 **COMPUTING RIDER PTC-FPP.**

15 A. Similar to past Rider PTC-FPP calculations, the cost of fuel, purchased power,
16 EAs, RECs, and costs for ER expenses were projected for an upcoming quarter
17 and and these cost projections along with projections of non-switched load were
18 used to compute certain components of Rider PTC-FPP. The rider also included
19 components to reconcile prior period differences in costs and revenue (*i.e.*, the
20 Reconciliation Adjustment or RA), and provided for recovery of losses incurred
21 from the generator to the meter (*i.e.*, the System Loss Adjustment or SLA).

1 **Q. WERE THERE OTHER ADJUSTMENTS TO COSTS INCLUDED IN THE**
2 **FPP?**

3 A. Periodically, the Company sells certain coal, EAs, and RECs. To the extent that
4 gains/losses were realized on the sale of these commodities that had been assigned
5 to Rider PTC-FPP, the value of these transactions were included in the calculation
6 of the Rider PTC-FPP market price. Rider PTC-FPP, therefore, reflected only the
7 net cost of fuel, purchased power, EAs, and RECs.

8 **Q. DID ALL CUSTOMERS PAY THE SAME RIDER PTC-FPP MARKET**
9 **PRICE?**

10 A. No. There were three different Rider PTC-FPP market prices applicable at any
11 given time. Although the fuel and purchased power component (FC), the EA
12 component, the ER component, and the REC component were the same for all
13 customers, the SLA and RA components could differ among the three different
14 customer classifications used in the calculation. The differences in the SLA and
15 the RA resulted in different overall Rider PTC-FPP market prices for residential
16 and non-residential customers taking service at distribution level voltage, and for
17 non-residential customers taking service at transmission level voltage (*i.e.*,
18 voltage reduction customers).

19 **Q. WHAT CAUSED THESE DIFFERENCES?**

20 A. The difference between the RA component of the Rider PTC-FPP market price
21 for residential customers and non-residential customers was due, in part, to the
22 timing of when Rider PTC-FPP started for each class of customers. Because Rider
23 PTC-FPP (Rider FPP at that time) became effective one year later for residential

1 customers, the RA was calculated separately for residential and non-residential
2 customers. Additionally, as I will discuss later, differences in switching among
3 the customer classes now is the major factor for the differences in the RA
4 component of the Rider PTC-FPP price.

5 There was also a difference in the SLA component of the Rider PTC-FPP
6 market price for customers taking service at different voltage levels. Simply put, a
7 generator must produce more energy to provide power to customers at distribution
8 level voltage than at the higher transmission level voltage. The Rider PTC-FPP
9 calculation addressed this difference in the SLA component. This adjustment was
10 for as long as the Rider PTC-FPP (and its predecessor, Rider FPP) was applicable.

11 **Q. HOW DOES CUSTOMER SWITCHING IMPACT THE RIDER PTC-FPP**
12 **PRICE TO CUSTOMERS?**

13 A. Duke Energy Ohio experienced significant levels of customer switching among its
14 retail customers, particularly among commercial and industrial customers. The
15 table below shows the approximate levels of switching as a percent of load, an
16 annualized basis, for each customer class, at the end of 2008, 2009, 2010, and as
17 of September 2011.

Switching by Customer Class				
	At 12/31/08	At 12/31/09	At 12/31/10	At 9/30/11
Residential	1.56%	8.83%	25.64%	34.37%
Commercial	6.36%	42.19%	75.79%	80.15%
Industrial	0.33%	75.97%	87.45%	95.25%
Total Retail	2.55%	41.54%	59.92%	68.23%

18 Switching directly affected the RA component of Rider PTC-FPP when
19 there was an over- or under-recovery of prior period costs. If the Company

1 collected more or less revenue in a prior period for Rider PTC-FPP than its
2 eligible costs for that period, the over or under-recovery flowed through the next
3 period's Rider PTC-FPP's RA component. As a result, every kilowatt-hour that
4 switched from Duke Energy Ohio's SSO meant there was one less kilowatt-hour
5 to spread prior period over- or under-collections for future recovery. This had the
6 potential to exacerbate switching when the Rider PTC-FPP increased because
7 costs were under-collected in a prior period or to create a subsidy to non-
8 switchers if costs were over-collected in a prior period to be refunded in a future
9 period.

10 **Q. WERE THERE ANY SIGNIFICANT CHANGES TO THE**
11 **METHODOLOGY FOR COMPUTING THE RIDER PTC-FPP MARKET**
12 **PRICE SINCE THE LAST ANNUAL FILING?**

13 A. No. The Rider PTC-FPP was calculated in 2011 in the same manner as the year
14 before.

15 **Q. WOULD YOU SUMMARIZE THE RIDER PTC-FPP MARKET PRICES**
16 **FOR THE PRIOR FOUR QUARTERS?**

17 A. For the quarterly filings from Q1 2011 through Q4 2011, the Rider PTC-FPP
18 market price is shown below for residential, non-residential, and voltage-
19 reduction customers.

Summary of Rider PTC-FPP Market Prices							
	FC	EA	ER	REC	SLA	RA	FPP
Residential (¢/kWh)							
Q1 2011	2.8460	0.0228	0.1412	0.0358	0.0998	(0.1057)	3.0399
Q2 2011	3.0324	0.0192	0.1670	0.0339	0.1139	(0.8709)	2.4955
Q3 2011	2.9260	0.0173	0.1946	0.0350	0.1058	(0.0745)	3.2042
Q4 2011	2.8154	0.0166	0.1359	0.0341	0.0974	0.2143	3.3137
Non-Residential (¢/kWh)							
Q1 2011	2.8460	0.0228	0.1412	0.0358	0.0998	0.5017	3.6473
Q2 2011	3.0324	0.0192	0.1670	0.0339	0.1139	0.0204	3.3868
Q3 2011	2.9260	0.0173	0.1946	0.0350	0.1058	0.0956	3.3743
Q4 2011	2.8154	0.0166	0.1359	0.0341	0.0974	0.1408	3.2402
Voltage-Reduction (¢/kWh)							
Q1 2011	2.8460	0.0228	0.1412	0.0358	0.0511	0.5017	3.5986
Q2 2011	3.0324	0.0192	0.1670	0.0339	0.0583	0.0204	3.3312
Q3 2011	2.9260	0.0173	0.1946	0.0350	0.0542	0.0956	3.3227
Q4 2011	2.8154	0.0166	0.1359	0.0341	0.0498	0.1408	3.1926

1 **Q. WHAT WERE YOUR SOURCES FOR THE DATA USED TO COMPUTE**
2 **THE RIDER PTC-FPP MARKET PRICE?**

3 **A.** Rider PTC-FPP is calculated using projected costs for the applicable quarter and
4 actual data for prior periods being trued-up through the reconciliation process.
5 The projected data is provided by the Company's Commercial Asset
6 Management group and the historical data is provided by various internal
7 accounting organizations.

III. OVERVIEW OF SRA-SRT CALCULATION

8 **Q. HAS RIDER SRA-SRT BEEN IN EFFECT FOR ALL OF THE PERIOD**
9 **JANUARY 1, 2011, THROUGH DECEMBER 31, 2011?**

10 **A.** Yes.

11 **Q. PLEASE PROVIDE AN OVERVIEW OF THE METHODOLOGY FOR**
12 **CALCULATING THE RIDER SRA-SRT MARKET PRICE.**

1 A. The methodology underlying the Rider SRA-SRT calculation for 2011 was the
2 same as it has been in prior years. The Rider SRA-SRT market price for the first
3 quarter of 2011 was established based on a filing we made around December 1,
4 2010. The Company projected its anticipated reserve margin requirements for the
5 2011 and estimated the costs of purchasing a portfolio of capacity products to
6 meet its minimum reserve requirement established by the Midwest Independent
7 Transmission System Operator, Inc. (MISO).

8 After the total cost of the expected purchased capacity was determined, the
9 estimated cost was then allocated among the rate classes using appropriate and
10 previously agreed to allocators. Any over- or under-recovery of prior period
11 Rider SRA-SRT revenue was added to the allocated estimated cost. Finally, the
12 allocated costs and billing determinant data were used to develop the Rider SRA-
13 SRT market prices for each rate class.

14 For any given year, each quarterly filing after the filing for the first quarter
15 was essentially an update of the prior quarter's filing for that year. Consequently,
16 the estimated data in the prior quarter was replaced with either better estimates or
17 with actual results. This method mitigated some of the volatility inherent in
18 projecting data and minimizes the potential for large over- or under-recovery of
19 costs. The mechanism is straightforward and is illustrated in Attachment WDW-2.

20 **Q. OTHER THAN THE CHANGES IN THE RIDERS YOU DESCRIBED**
21 **ABOVE, WERE THERE ANY SUBSTANTIVE CHANGES TO RIDER**
22 **SRA-SRT IN CALENDAR YEAR 2011?**

23 A. No.

IV. DISCUSSION OF ISSUES FROM PRIOR AUDIT

1 **Q. PLEASE LIST THE COMMITMENTS FROM THE STIPULATION IN**
2 **CASE NO. 10-974-EL-UNC THAT YOU ARE ADDRESSING IN YOUR**
3 **TESTIMONY.**

4 A. I am addressing commitments the Company made in Paragraphs 4 through 8.

5 **Q. PLEASE DESCRIBE THE COMMITMENT CONTAINED IN**
6 **STIPULATION PARAGRAPH 4.**

7 A. Duke Energy Ohio agreed to meet with the signatories to the Stipulation to
8 discuss its plans for compliance with Ohio's alternative energy requirements
9 beyond 2011.

10 **Q. WHAT IS THE STATUS OF MEETING THIS COMMITMENT?**

11 A. As part of the settlement of Case No. 11-3549-EL-SSO, *et al.*, which established
12 the Company's new SSO in the form of an ESP with a price determined by a
13 competitive auction, Duke Energy Ohio and more than thirty intervening parties
14 agreed to an ongoing compliance process through the implementation of Rider
15 AER-R to recover costs of complying with the alternative energy requirements of
16 R.C. 4928.64. The Rider AER-R mechanism will continue beyond 2015, the term
17 of the new ESP. This mechanism gives Duke Energy Ohio some certainty
18 regarding the ability to recover costs of continuing to comply with R.C. 4928.64.
19 The rider will be adjusted quarterly with annual audits performed by either the
20 Commission staff or an independent auditor. It is my understanding the the
21 Company anticipates initiating discussion with the Parties to the prior audit

1 proceeding regarding future alternative energy compliance plans in accordance
2 with the paragraph 4 commitment.

3 The Company also agreed to initiate collaborative discussions to revise
4 certain elements Company's residential Solar REC purchase program. It is my
5 understanding that those collaborative discussion have recently started.

6 **Q. PLEASE DESCRIBE THE COMMITMENT CONTAINED IN
7 STIPULATION PARAGRAPH 5.**

8 A. Paragraph 5 states that Duke Energy Ohio will credit \$612,970 in the Rider PTC-
9 FPP filing for the fourth quarter of 2011.

10 **Q. WHAT IS THE STATUS OF THIS CREDIT?**

11 A. The Company included \$612,970 as a credit against total recoverable costs in the
12 Rider PTC-FPP for that quarter.

13 **Q. PLEASE DESCRIBE THE COMMITMENT CONTAINED IN
14 STIPULATION PARAGRAPH 6.**

15 A. Paragraph 6 states that Duke Energy Ohio will complete work to develop an
16 accounting and procedures manual governing the processes involved in filing the
17 for fuel and fuel-related charges and that this document shall be developed in time
18 for review by the auditor for the 2011 Audit Report..

19 **Q. WHAT IS THE STATUS OF THIS MANUAL?**

20 A. The Company has developed a procedures manual governing the process involved
21 in *filing* the Rider PTC-FPP. .

22 **Q. IN LIGHT OF THE FACT THAT RIDERS PTC-FPP AND SRA-SRT
23 BOTH EXPIRED ON DECEMBER 31, 2011, DOES THIS ACCOUNTING**

1 **MANUAL HAVE ANY SIGNIFICANCE IN THE CURRENT**
2 **REGULATORY MODEL?**

3 A. No. The key provision in the commitment is that the manuals involved relate to
4 the Company's "filing" for recovery of its fuel and fuel-related charges. The
5 Company's current electric security plan explicitly prohibits using its own
6 generation for providing SSO service; consequently, there will be no new
7 "filings" for recovery of fuel and fuel-related costs. Although the Company has
8 worked to develop the documentation provided for in the Stipulation, there is no
9 value whatsoever to be obtained from these documents as the cost of fuel and
10 fuel-related charges to Duke Energy Ohio is moot in terms of how it impacts retail
11 rates.

12 **Q. PLEASE DESCRIBE THE COMMITMENT CONTAINED IN**
13 **STIPULATION PARAGRAPH 7.**

14 A. Paragraph 7 states that Duke Energy Ohio will establish a procedure for verifying
15 customer bill information when supplying its billing system data to the auditors
16 during testing procedures.

17 **Q. WHAT IS THE STATUS OF THIS COMMITMENT?**

18 A. The Company has developed a procedure for verifying customer bill information
19 when supplying it from the billing system to outside auditors during testing
20 procedures.

21 **Q. PLEASE DESCRIBE THE COMMITMENT CONTAINED IN**
22 **STIPULATION PARAGRAPH 8.**

1 A. Paragraph 8 states that Duke Energy Ohio will “complete work to develop an
2 accounting and procedures manual governing the processes involved in
3 [supporting documentation for the existing SRT rider]” and that this document
4 shall be developed in time for review by the auditor for the 2011 Audit Report.

5 **Q. WHAT IS THE STATUS OF THIS COMMITMENT?**

6 A. The Company has developed a procedures manual governing the process involved
7 in *filing* the Rider SRA-SRT.

8 **Q. IN LIGHT OF THE FACT THAT RIDERS PTC-FPP AND SRA-SRT**
9 **BOTH EXPIRED ON DECEMBER 31, 2011, DOES THIS ACCOUNTING**
10 **MANUAL HAVE ANY SIGNIFICANCE IN THE CURRENT**
11 **REGULATORY MODEL?**

12 A. No. The key provision in the commitment is that the manuals involved relate to
13 the Company’s “filing” for recovery of costs associated with Rider SRA-SRT.
14 The Company’s current electric security plan explicitly prohibits using its own
15 generation for providing SSO service. Although the Company has worked to
16 develop the documentation provided for in the Stipulation, there is no value to be
17 obtained from these documents as there will be no future Rider SRA-SRT filings
18 because procurement of all capacity needs for SSO load is now part of the
19 competitive bidding process (CBP). Therefore, the cost of purchasing capacity is
20 exclusively subject to competitive auction charges and is procured through an
21 entirely different process.

V. IMPACT OF NEW ELECTRIC SECURITY PLAN

1 **Q. HOW DOES THE COMPANY'S NEW ELECTRIC SECURITY PLAN**
2 **IMPACT THE RIDER PTC-FPP AND RIDER SRA-SRT?**

3 A. On November 22, 2011, the Commission approved a stipulation that was reached
4 among the parties settling Duke Energy Ohio's new ESP (Case No. 11-3549-EL-
5 SSO, *et al.*). The new ESP radically alters the manner in which Duke Energy
6 Ohio procures energy and capacity to deliver to its SSO customers. Insofar as the
7 Rider PTC-FPP and Rider SRA-SRT are concerned, these riders expired after
8 December 31, 2011, as the Company no longer uses its own generating resources
9 to serve its SSO customers. As of January 1, 2012, all of the energy and capacity
10 required to meet Duke Energy Ohio's SSO load obligation is procured through a
11 CBP. Consequently, as of January 1, 2012, the Company no longer recovers from
12 its SSO customers the cost of fuel, purchased economy energy, cost of emission
13 allowances, purchased capacity, or environmental reagent costs via either Rider
14 PTC-FPP or Rider SRA-SRT. As I will discuss in more detail below, the
15 Company will continue to recover the costs for RECs in the new ESP but via a
16 different rider (Rider AER-R, or "alternative energy recovery rider")

17 Because all of the capacity and energy required to meet the Company's
18 SSO obligation is being procured via a CBP, two new riders were implemented to
19 recover the cost of capacity and energy procured in the CBP, Rider RC (Retail
20 Capacity) and Rider RE (Retail Energy). These two riders are only intended to
21 recover the cost of the megawatt-hours delivered by the winning bidders in the
22 CBP to SSO load (no more and no less).

1 **Q. IN LIGHT OF THE NEW ESP, DOES THAT CONCLUDE THE NEED**
2 **FOR FURTHER REVIEW OF RIDER PTC-FPP AND RIDER SRA-SRT?**

3 A. Almost. Although these riders expired after December 31, 2011, the Company
4 ended the year with a difference between what was collected from customers via
5 these riders and what actual costs were. Another provision of the approved new
6 ESP is that the Company will implement a new rider for a short period of time to
7 true-up the difference in the costs and revenues for these two riders as of
8 December 31, 2011. Rider RECON (RECON = reconciliation) is the mechanism
9 approved by the Commission to accomplish this objective.

10 **Q. HOW WILL RIDER RECON WORK?**

11 A. Per the Commission's December 14, 2011, entry in Case No. 11-3549-EL-SSO *et*
12 *al.*, Duke Energy Ohio is making a separate rider application to establish the
13 initial rate for Rider RECON. Details regarding the calculations and assumptions
14 are contained in that filing; however, generally, Rider RECON will take the
15 ending balance of over- or under-recovery for Rider PTC-FPP and Rider SRA-
16 SRT and divide the balance by projected kWh sales to SSO customers for the six-
17 month ending September 30, 2012. A significant provision of the Stipulation
18 related to Rider RECON is that any adjustment to the Rider PTC-FPP and/or
19 Rider SRA-SRT approved by the Commission as a result of the audit, being
20 conducted by Schumaker and Associates, will be incorporated into Rider
21 RECON. The Company does not anticipate any adjustments but there have been
22 occasions in the past where an adjustment to such costs was agreed to by the
23 Parties as part of a settlement. The ability to incorporate such a change in Rider

1 RECON ensures that we have a mechanism to effectuate any additional needed
2 true-up that is identified in the Audit for the 2011 rider filings.

3 **Q. WILL YOU PROVIDE SOME ADDITIONAL DETAILS ABOUT THE**
4 **RECOVERY OF RENEWABLE ENERGY CREDITS?**

5 A. As I mentioned above, the Company's energy and capacity requirements to serve
6 SSO customers is being procured exclusively via a competitive bid process. The
7 Company continues to be responsible for meeting its renewable energy
8 obligations as defined in R.C. 4928.64. Because this is an ongoing obligation and
9 comes with a cost, the new ESP includes the new rider, Rider AER-R, through
10 which all allowable costs of complying with R.C. 4928.64 and 4928.65 will be
11 recovered. The new rider is being introduced because the recovery method prior
12 to January 1, 2012, was via a rider which is now expired, namely, Rider PTC-
13 FPP. The types of costs, basis for recovery (*i.e.*, it's a bypassable rider), and
14 virtually all other characteristics of recovering REC costs are unchanged from the
15 prior method of recovery – the difference is only that the costs are being
16 recovered in a separate rider as of January 1, 2012.

VI. CONCLUSION

17 **Q. ARE THERE ADDITIONAL CHANGES TO RIDERS PTC-FPP AND SRA-**
18 **SRT IN ANTICIPATED FOR 2011?**

19 A. No.

20 **Q. WERE ATTACHMENTS WDW-1 AND WDW-2 PREPARED BY YOU OR**
21 **UNDER YOUR SUPERVISION?**

22 A. Yes.

1 Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

2 A. Yes.

Duke Energy Corporation

Enclosed for filing are fifteen (15) copies of the following attachments containing the Facts, Data, and Other Information pertinent to Duke Energy Ohio, Inc. fuel, economy purchased power, and emission allowance of its proposed market-based standard service offer (PTC-FPP):

- (a) Attachment I – Statement of Fuel Procurement Policies and Practices and
- (b) Attachment II – Narrative statement and applicable quarterly FPP forms supporting the proposed calculation of the fuel, economy purchased power, emission allowance, environmental reagent, and alternative energy portfolio standard component of its market-based standard service offer for the base period of January through March 2011. The FPP component will be applied to bills rendered during the quarter ending March 2011.

Please time-stamp the enclosed extra copy and return for our file. Thank you for your timely assistance in this regard.

Very truly yours,

Lisa D. Steinkuhl

STATEMENT OF FUEL PROCUREMENT PRACTICES AND POLICIES

Duke Energy's ("Company") Commercial Asset Management Service (CAM) group is responsible for managing the power, fuel and emission allowance positions for the Company's operating units, including the Company's Ohio generation portfolio to provide a reliable, low cost, market-based supply of electricity for the Ohio customers.

CAMS is responsible for establishing and implementing the multi-commodity risk management strategy for power, fuel and emission allowances. CAM monitors and adjusts the optimal contract mix all the way through physical delivery. These adjustments result in the purchases or sales of Fuel, Emission Allowances, and Power for the approved term if the forward market allows them to transact. Fuel purchases are made through a combination of long-term and spot market purchases.

CAMS fuel procurement and Logistic groups include evaluating proposals for fuel and transportation contracts, selecting and qualifying suppliers and shippers, contract negotiation, administration and enforcement, and ongoing transportation maintenance and operations support. CAMS is responsible for complying with fuel procurement regulations.

CAMS evaluates its fuel and transportation services practices on a continuing basis and updates them as needed. This continuous self-evaluation ensures that CAMS follows the best available practices as they relate to the changing business environment of the Company and the industry, the effect of state and/or federal legislation, the orders or rules of any state commission, or any other event that may impact the Company's procurement and use of fuel.

A balancing of short-term and long-term contracts is an effective way to achieve critical portfolio goals such as:

- Effective management of market price risk
- Assurance of adequate and appropriate supply from reliable suppliers
- Competitive pricing
- Market intelligence
- Continuing evaluation of suppliers
- Flexibility in responding to changing market or economic conditions
- Efficient delivery of shipments and contract administration
- Coal basin balance and diversity

CAMS makes every effort to purchase fuels compatible for all Ohio generation portfolios. This decision making process also heavily involves inputs from all station managers. Further, the cost of complying with environmental regulations regarding emissions is factored into purchasing decisions.

Coal quality specifications may include moisture, ash, calorific value, sulfur, volatility, grindability, chlorine, mineral ash analysis, fusion temperature. These parameters assure that the coal will be compatible with equipment operation and environmental regulations. Quality price adjustments will be made for deliveries not within contract specifications.

ATTACHMENT I

STATEMENT OF FUEL PROCUREMENT PRACTICES AND POLICIES

For longer term commitments, suppliers are generally evaluated on the basis of delivered cost (adjusted for MMBtu, SO₂, and freight), credit strength, proximity to transportation, and willingness to extend commercial terms. Additional evaluation is done, as needed, concerning by-product handling, disposal, and various environmental limits at the station sites. For short-term purchases, the evaluation focuses primarily on evaluated cost relative to the market.

ATTACHMENT II

DUKE ENERGY OHIO (DUKE)

NARRATIVE STATEMENT SUPPORTING ITS PROPOSED FPP COMPONENT

Duke Energy Ohio has calculated a proposed Quarterly Fuel, Economy Purchased Power Rider (PTC-FPP) of its standard service offer for the three-month projected period of January through March 2011.

The proposed FPP Rates are segregated into three types of customers, Residential, Non-Residential and Voltage Reduction customers. Depending on the type of customer, the appropriate rate will be applied to all bills, excluding consumers taking generation service from Certified Retail Electric Service providers, rendered on and after January 4, 2011, and will coincide with the billing of Cycle 1 of the January 2011 revenue month and remain in effect through March 2011.

The methodology for calculating the proposed FPP Component of 3.0399 cents per kilowatt-hour for Residential, 3.6473 cents per kilowatt-hour for Non-Residential and 3.5986 cents per kilowatt-hour for Voltage Reduction type customers is consistent with the Commission's Entry on Rehearing and is composed of the following components:

FUEL COMPONENT (FC)

The base period of January through March 2011 was utilized to calculate the proposed fuel and economy purchased power component (FC). The proposed FC is composed of three months projected includable fuel cost and economy purchased power data. The total FC calculated portion of the FPP Component is 2.8460 cents per kilowatt-hour for all types of customers. This proposed FC is supported by the attached calculations on Page 1 of 5 of Schedule 1.

EMISSION ALLOWANCES (EA)

The base period of January through March 2011 was utilized to calculate the emission allowance component (EA) for all types of customers. The proposed EA is composed of three months projected includable emission allowance data. The total EA calculated portion of the FPP Component is 0.0228 cents per kilowatt-hour for all types of customers. This proposed EA is supported by the attached calculations on Page 2 of 5 of Schedule 1.

ATTACHMENT II

Environmental Reagents (ER)

Per Stipulation in Case No. 09-770-EL-UNC filed with the Commission on 11/19/09, environmental reagents will be recovered in the PTC-FPP rather than the PTC-AAC effective with the January 2010 revenue month. The base period of January through March 2011 was utilized to calculate the environmental reagents component (ER) for all types of customers. The proposed ER is composed of three months projected includable environmental reagent data. The total ER calculated portion of the FPP Component is 0.1412 cents per kilowatt-hour for all types of customers. This proposed ER is supported by the attached calculations on Page 2 of 5 of Schedule 1.

Alternative Energy Portfolio Standard (AEPS)

Ohio Revised Code 4928.64 requires an electric distribution utility to supply a portion of its load with alternative utility resources. The costs incurred are avoidable by any consumer that has exercised choice of electricity supplier. The base period of January through March 2011 was utilized to calculate the alternative energy portfolio standard for all types of customers. The total alternative energy portfolio standard calculated portion of the FPP Component is 0.0358 cents per kilowatt-hour for all types of customers. This proposed alternative energy portfolio standard is supported by the attached calculations on Page 2 of 5 of Schedule 1.

RECONCILIATION ADJUSTMENT (RA)

The proposed RA component is based on the reconciliation of actual fuel, economy purchased power, emission allowance costs, environmental reagent costs, alternative energy portfolio standard and system loss adjustment to the FPP Component revenues for the three month period ending September 2010. The RA amount for the three month period ending September 2010 included in this filing is (\$1,545,199.96) for Residential customers and \$2,781,783.86 for Non-Residential customers and \$436,146.60 for Voltage Reduction customers. In addition to these RA amounts are (\$33,901.76) for Residential customers and (\$810.96) for Non-Residential customers and \$2,327.49 for Voltage Reduction customers which represents an updated adjustment to the 2nd quarter 2010 RA amount filed in the 4th quarter 2010 filing and is supported by the attached calculations on Page 5S thru 5X of 5 of Schedule 1. In addition to these RA amounts are \$50,184.84 for Residential customers and \$33,389.17 for Non-Residential customers and \$2,853.14 for Voltage Reduction customers which represents an updated adjustment to the 1st quarter 2010 RA amount filed in the 3rd quarter 2010 filing and is supported by the attached calculations on Page 5M thru 5R of 5 of Schedule 1. In addition to these RA amounts are \$23,593.94 for Residential customers and \$19,650.61 for Non-Residential customers and \$999.84 for Voltage Reduction customers which represents an updated adjustment to the 4th quarter 2009 RA amount filed in the 2nd quarter 2010 filing and is supported by the attached calculations on Page 5G thru 5L of 5 of Schedule 1. The total proposed RA is supported by the attached calculations on Page 3 of 5 of Schedule 1.

ATTACHMENT II

SYSTEM LOSS ADJUSTMENT (SLA)

The proposed SLA Component is based on the estimated system loss fuel cost to be incurred during the three month period ending March 2011. The total SLA calculated portion of the FPP Component is 0.1949 cents per kilowatt-hour for Residential and Non-Residential type customers, and 0.0892 cents per kilowatt-hour for Voltage Reduction type customers. From the number for Residential and Non-Residential type customers, the Company has subtracted a baseline rate of 0.1051 cents per kilowatt-hour that is already included in rates. From the number for Voltage Reduction type customers, the Company has subtracted a baseline rate of 0.0481 cents per kilowatt-hour that is already included in rates. Both rates are increased by 0.0100 cents per kilowatt-hour which represents a Synchronization Adjustment. Based upon this information, the proposed SLA should be established at 0.0998 cents per kilowatt-hour for Residential and Non-Residential type customers and at 0.0511 cents per kilowatt-hour for Voltage Reduction type customers. The proposed SLA is supported by the attached calculations on Page 4 of 5 of Schedule 1.

FUEL, ECONOMY PURCHASED POWER AND EMISSION ALLOWANCE COMPONENT

Based on the aforementioned projected includable fuel and economy purchased power cost data (FC) summarized on Page 1 of Schedule 1, the Emission Allowance Component (EA) on Page 2 of Schedule 1, the Environmental Reagent Component (ER) on Page 2 of Schedule 1, the Alternative Energy Portfolio Standard (AEPS) on Page 2 of Schedule 1, the Reconciliation Adjustment (RA) on Page 3 of Schedule 1, and the System Loss Adjustment (SLA) on Page 4 of Schedule 1, the Company proposes that a FPP Component of 3.0399 cents per kilowatt-hour be established for Residential type customers, 3.6473 cents per kilowatt-hour be established for Non-Residential type customers and 3.5986 cents per kilowatt-hour be established for Voltage Reduction type customers. These rates should be effective with bills rendered on and after January 4, 2011, to all consumers other than consumers taking generation service from Certified Retail Electric Suppliers. This will coincide with Cycle 1 billing for the January 2011 revenue month.

RE: In the Matter of The Application of Duke Energy)
Ohio to Modify its Fuel, Economy Purchased) Case No. 11-974-EL-FAC
Power Component of Its Market-Based Standard)
Service Offer for 2011)

Docketing Division:

Enclosed for filing are fifteen (15) copies of the following attachments containing the Facts, Data, and Other Information pertinent to Duke Energy Ohio, Inc. fuel, economy purchased power, and emission allowance of its proposed market-based standard service offer (PTC-FPP):

- (a) Attachment I – Statement of Fuel Procurement Policies and Practices and
- (b) Attachment II – Narrative statement and applicable quarterly FPP forms supporting the proposed calculation of the fuel, economy purchased power, emission allowance, environmental reagent, and alternative energy portfolio standard component of its market-based standard service offer for the base period of April through June 2011. The FPP component will be applied to bills rendered during the quarter ending June 2011.

Please time-stamp the enclosed extra copy and return for our file. Thank you for your timely assistance in this regard.

Very truly yours,

Lisa D. Steinkuhl

ATTACHMENT I

STATEMENT OF FUEL PROCUREMENT PRACTICES AND POLICIES

Duke Energy's ("Company") Commercial Asset Management Service (CAM) group is responsible for managing the power, fuel and emission allowance positions for the Company's operating units, including the Company's Ohio generation portfolio to provide a reliable, low cost, market-based supply of electricity for the Ohio customers.

CAMS is responsible for establishing and implementing the multi-commodity risk management strategy for power, fuel and emission allowances. CAM monitors and adjusts the optimal contract mix all the way through physical delivery. These adjustments result in the purchases or sales of Fuel, Emission Allowances, and Power for the approved term if the forward market allows them to transact. Fuel purchases are made through a combination of long-term and spot market purchases.

CAMS fuel procurement and Logistic groups include evaluating proposals for fuel and transportation contracts, selecting and qualifying suppliers and shippers, contract negotiation, administration and enforcement, and ongoing transportation maintenance and operations support. CAMS is responsible for complying with fuel procurement regulations.

CAMS evaluates its fuel and transportation services practices on a continuing basis and updates them as needed. This continuous self-evaluation ensures that CAMS follows the best available practices as they relate to the changing business environment of the Company and the industry, the effect of state and/or federal legislation, the orders or rules of any state commission, or any other event that may impact the Company's procurement and use of fuel.

A balancing of short-term and long-term contracts is an effective way to achieve critical portfolio goals such as:

- Effective management of market price risk
- Assurance of adequate and appropriate supply from reliable suppliers
- Competitive pricing
- Market intelligence
- Continuing evaluation of suppliers
- Flexibility in responding to changing market or economic conditions
- Efficient delivery of shipments and contract administration
- Coal basin balance and diversity

CAMS makes every effort to purchase fuels compatible for all Ohio generation portfolios. This decision making process also heavily involves inputs from all station managers. Further, the cost of complying with environmental regulations regarding emissions is factored into purchasing decisions.

Coal quality specifications may include moisture, ash, calorific value, sulfur, volatility, grindability, chlorine, mineral ash analysis, fusion temperature. These parameters assure that the coal will be compatible with equipment operation and environmental regulations. Quality price adjustments will be made for deliveries not within contract specifications.

ATTACHMENT I

STATEMENT OF FUEL PROCUREMENT PRACTICES AND POLICIES

For longer term commitments, suppliers are generally evaluated on the basis of delivered cost (adjusted for MMBtu, SO₂, and freight), credit strength, proximity to transportation, and willingness to extend commercial terms. Additional evaluation is done, as needed, concerning by-product handling, disposal, and various environmental limits at the station sites. For short-term purchases, the evaluation focuses primarily on evaluated cost relative to the market.

ATTACHMENT II

DUKE ENERGY OHIO (DUKE)

NARRATIVE STATEMENT SUPPORTING ITS PROPOSED FPP COMPONENT

Duke Energy Ohio has calculated a proposed Quarterly Fuel, Economy Purchased Power Rider (PTC-FPP) of its standard service offer for the three-month projected period of April through June 2011.

The proposed FPP Rates are segregated into three types of customers, Residential, Non-Residential and Voltage Reduction customers. Depending on the type of customer, the appropriate rate will be applied to all bills, excluding consumers taking generation service from Certified Retail Electric Service providers, rendered on and after April 1, 2011, and will coincide with the billing of Cycle 1 of the April 2011 revenue month and remain in effect through June 2011.

The methodology for calculating the proposed FPP Component of 2.4955 cents per kilowatt-hour for Residential, 3.3868 cents per kilowatt-hour for Non-Residential and 3.3312 cents per kilowatt-hour for Voltage Reduction type customers is consistent with the Commission's Entry on Rehearing and is composed of the following components:

FUEL COMPONENT (FC)

The base period of April through June 2011 was utilized to calculate the proposed fuel and economy purchased power component (FC). The proposed FC is composed of three months projected includable fuel cost and economy purchased power data. The total FC calculated portion of the FPP Component is 3.0324 cents per kilowatt-hour for all types of customers. This proposed FC is supported by the attached calculations on Page 1 of 5 of Schedule 1.

EMISSION ALLOWANCES (EA)

The base period of April through June 2011 was utilized to calculate the emission allowance component (EA) for all types of customers. The proposed EA is composed of three months projected includable emission allowance data. The total EA calculated portion of the FPP Component is 0.0192 cents per kilowatt-hour for all types of customers. This proposed EA is supported by the attached calculations on Page 2 of 5 of Schedule 1.

Environmental Reagents (ER)

Per Stipulation in Case No. 09-770-EL-UNC filed with the Commission on 11/19/09, environmental reagents will be recovered in the PTC-FPP rather than the PTC-AAC effective with the January 2010 revenue month. The base period of April through June 2011 was utilized to calculate the environmental reagents component (ER) for all types of customers. The proposed ER is composed of three months projected includable environmental reagent data. The total ER calculated portion of the FPP Component is 0.1670 cents per kilowatt-hour for all types of customers. This proposed ER is supported by the attached calculations on Page 2 of 5 of Schedule 1.

ATTACHMENT II

Alternative Energy Portfolio Standard (AEPS)

Ohio Revised Code 4928.64 requires an electric distribution utility to supply a portion of its load with alternative utility resources. The costs incurred are avoidable by any consumer that has exercised choice of electricity supplier. The base period of April through June 2011 was utilized to calculate the alternative energy portfolio standard for all types of customers. The total alternative energy portfolio standard calculated portion of the FPP Component is 0.0339 cents per kilowatt-hour for all types of customers. This proposed alternative energy portfolio standard is supported by the attached calculations on Page 2 of 5 of Schedule 1.

RECONCILIATION ADJUSTMENT (RA)

The proposed RA component is based on the reconciliation of actual fuel, economy purchased power, emission allowance costs, environmental reagent costs, alternative energy portfolio standard and system loss adjustment to the FPP Component revenues for the twelve month period ending December 2010. The RA amount for the three month period ending December 2010 included in this filing is (\$8,638,595.21) for Residential customers and (\$634,948.02) for Non-Residential customers and \$899,099.10 for Voltage Reduction customers. In addition to these RA amounts are (\$237,664.31) for Residential customers and (\$105,424.60) for Non-Residential customers and \$790.11 for Voltage Reduction customers which represents an updated adjustment to the 3rd quarter 2010 RA amount filed in the 1st quarter 2011 filing and is supported by the attached calculations on Page 5Y thru 5AD of 5 of Schedule 1. In addition to these RA amounts are \$89,615.57 for Residential customers and \$65,320.95 for Non-Residential customers and \$5,865.96 for Voltage Reduction customers which represents an updated adjustment to the 2nd quarter 2010 RA amount filed in the 4th quarter 2010 filing and is supported by the attached calculations on Page 5S thru 5X of 5 of Schedule 1. In addition to these RA amounts are (\$129,845.74) for Residential customers and (\$83,444.12) for Non-Residential customers and (\$5,377.46) for Voltage Reduction customers which represents an updated adjustment to the 1st quarter 2010 RA amount filed in the 3rd quarter 2010 filing and is supported by the attached calculations on Page 5M thru 5R of 5 of Schedule 1. The total proposed RA is supported by the attached calculations on Page 3 of 5 of Schedule 1.

SYSTEM LOSS ADJUSTMENT (SLA)

The proposed SLA Component is based on the estimated system loss fuel cost to be incurred during the three month period ending June 2011. The total SLA calculated portion of the FPP Component is 0.1025 cents per kilowatt-hour for Residential and Non-Residential type customers, and 0.0469 cents per kilowatt-hour for Voltage Reduction type customers. From the number for Residential and Non-Residential type customers, the Company has subtracted a baseline rate of 0.1051 cents per kilowatt-hour that is already included in rates. From the number for Voltage Reduction type customers, the Company has subtracted a baseline rate of 0.0481 cents per kilowatt-hour that is already included in rates. Both rates are increased by 0.0114 cents per kilowatt-hour which represents a Synchronization Adjustment. Based upon this information, the proposed SLA should be established at 0.1139 cents per kilowatt-hour for Residential and Non-Residential type

ATTACHMENT II

customers and at 0.0583 cents per kilowatt-hour for Voltage Reduction type customers. The proposed SLA is supported by the attached calculations on Page 4 of 5 of Schedule 1.

FUEL, ECONOMY PURCHASED POWER AND EMISSION ALLOWANCE COMPONENT

Based on the aforementioned projected includable fuel and economy purchased power cost data (FC) summarized on Page 1 of Schedule 1, the Emission Allowance Component (EA) on Page 2 of Schedule 1, the Environmental Reagent Component (ER) on Page 2 of Schedule 1, the Alternative Energy Portfolio Standard (AEPS) on Page 2 of Schedule 1, the Reconciliation Adjustment (RA) on Page 3 of Schedule 1, and the System Loss Adjustment (SLA) on Page 4 of Schedule 1, the Company proposes that a FPP Component of 2.4955 cents per kilowatt-hour be established for Residential type customers, 3.3868 cents per kilowatt-hour be established for Non-Residential type customers and 3.3312 cents per kilowatt-hour be established for Voltage Reduction type customers. These rates should be effective with bills rendered on and after April 1, 2011, to all consumers other than consumers taking generation service from Certified Retail Electric Suppliers. This will coincide with Cycle 1 billing for the April 2011 revenue month.

RE: In the Matter of The Application of Duke Energy)
Ohio to Modify its Fuel, Economy Purchased) Case No. 11-974-EL-FAC
Power Component of Its Market-Based Standard)
Service Offer for 2011)

Docketing Division:

Enclosed for filing are fifteen (15) copies of the following attachments containing the Facts, Data, and Other Information pertinent to Duke Energy Ohio, Inc. fuel, economy purchased power, and emission allowance of its proposed market-based standard service offer (PTC-FPP):

- (a) Attachment I – Statement of Fuel Procurement Policies and Practices and
- (b) Attachment II – Narrative statement and applicable quarterly FPP forms supporting the proposed calculation of the fuel, economy purchased power, emission allowance, environmental reagent, and alternative energy portfolio standard component of its market-based standard service offer for the base period of July through September 2011. The FPP component will be applied to bills rendered during the quarter ending September 2011.

Please time-stamp the enclosed extra copy and return for our file. Thank you for your timely assistance in this regard.

Very truly yours,

Lisa D. Steinkuhl

ATTACHMENT I

STATEMENT OF FUEL PROCUREMENT PRACTICES AND POLICIES

Duke Energy's ("Company") Commercial Asset Management Service (CAM) group is responsible for managing the power, fuel and emission allowance positions for the Company's operating units, including the Company's Ohio generation portfolio to provide a reliable, low cost, market-based supply of electricity for the Ohio customers.

CAMS is responsible for establishing and implementing the multi-commodity risk management strategy for power, fuel and emission allowances. CAM monitors and adjusts the optimal contract mix all the way through physical delivery. These adjustments result in the purchases or sales of Fuel, Emission Allowances, and Power for the approved term if the forward market allows them to transact. Fuel purchases are made through a combination of long-term and spot market purchases.

CAMS fuel procurement and Logistic groups include evaluating proposals for fuel and transportation contracts, selecting and qualifying suppliers and shippers, contract negotiation, administration and enforcement, and ongoing transportation maintenance and operations support. CAMS is responsible for complying with fuel procurement regulations.

CAMS evaluates its fuel and transportation services practices on a continuing basis and updates them as needed. This continuous self-evaluation ensures that CAMS follows the best available practices as they relate to the changing business environment of the Company and the industry, the effect of state and/or federal legislation, the orders or rules of any state commission, or any other event that may impact the Company's procurement and use of fuel.

A balancing of short-term and long-term contracts is an effective way to achieve critical portfolio goals such as:

- Effective management of market price risk
- Assurance of adequate and appropriate supply from reliable suppliers
- Competitive pricing
- Market intelligence
- Continuing evaluation of suppliers
- Flexibility in responding to changing market or economic conditions
- Efficient delivery of shipments and contract administration
- Coal basin balance and diversity

CAMS makes every effort to purchase fuels compatible for all Ohio generation portfolios. This decision making process also heavily involves Inputs from all station managers. Further, the cost of complying with environmental regulations regarding emissions is factored into purchasing decisions.

Coal quality specifications may include moisture, ash, calorific value, sulfur, volatility, grindability, chlorine, mineral ash analysis, fusion temperature. These parameters assure that the coal will be compatible with equipment operation and environmental regulations. Quality price adjustments will be made for deliveries not within contract specifications.

ATTACHMENT I

STATEMENT OF FUEL PROCUREMENT PRACTICES AND POLICIES

For longer term commitments, suppliers are generally evaluated on the basis of delivered cost (adjusted for MMBtu, SO₂, and freight), credit strength, proximity to transportation, and willingness to extend commercial terms. Additional evaluation is done, as needed, concerning by-product handling, disposal, and various environmental limits at the station sites. For short-term purchases, the evaluation focuses primarily on evaluated cost relative to the market.

ATTACHMENT II

DUKE ENERGY OHIO (DUKE)

NARRATIVE STATEMENT SUPPORTING ITS PROPOSED FPP COMPONENT

Duke Energy Ohio has calculated a proposed Quarterly Fuel, Economy Purchased Power Rider (PTC-FPP) of its standard service offer for the three-month projected period of July through September 2011.

The proposed FPP Rates are segregated into three types of customers, Residential, Non-Residential and Voltage Reduction customers. Depending on the type of customer, the appropriate rate will be applied to all bills, excluding consumers taking generation service from Certified Retail Electric Service providers, rendered on and after July 1, 2011, and will coincide with the billing of Cycle 1 of the July 2011 revenue month and remain in effect through September 2011.

The methodology for calculating the proposed FPP Component of 3.2042 cents per kilowatt-hour for Residential, 3.3743 cents per kilowatt-hour for Non-Residential and 3.3227 cents per kilowatt-hour for Voltage Reduction type customers is consistent with the Commission's Entry on Rehearing and is composed of the following components:

FUEL COMPONENT (FC)

The base period of July through September 2011 was utilized to calculate the proposed fuel and economy purchased power component (FC). The proposed FC is composed of three months projected includable fuel cost and economy purchased power data. The total FC calculated portion of the FPP Component is 2.9260 cents per kilowatt-hour for all types of customers. This proposed FC is supported by the attached calculations on Page 1 of 5 of Schedule 1.

EMISSION ALLOWANCES (EA)

The base period of July through September 2011 was utilized to calculate the emission allowance component (EA) for all types of customers. The proposed EA is composed of three months projected includable emission allowance data. The total EA calculated portion of the FPP Component is 0.0173 cents per kilowatt-hour for all types of customers. This proposed EA is supported by the attached calculations on Page 2 of 5 of Schedule 1.

Environmental Reagents (ER)

Per Stipulation in Case No. 09-770-EL-UNC filed with the Commission on 11/19/09, environmental reagents will be recovered in the PTC-FPP rather than the PTC-AAC effective with the January 2010 revenue month. The base period of July through September 2011 was utilized to calculate the environmental reagents component (ER) for all types of customers. The proposed ER is composed of three months projected includable environmental reagent data. The total ER calculated portion of the FPP Component is 0.1946 cents per kilowatt-hour for all types of customers. This proposed ER is supported by the attached calculations on Page 2 of 5 of Schedule 1.

ATTACHMENT II

Alternative Energy Portfolio Standard (AEPS)

Ohio Revised Code 4928.64 requires an electric distribution utility to supply a portion of its load with alternative utility resources. The costs incurred are avoidable by any consumer that has exercised choice of electricity supplier. The base period of July through September 2011 was utilized to calculate the alternative energy portfolio standard for all types of customers. The total alternative energy portfolio standard calculated portion of the FPP Component is 0.0350 cents per kilowatt-hour for all types of customers. This proposed alternative energy portfolio standard is supported by the attached calculations on Page 2 of 5 of Schedule 1.

RECONCILIATION ADJUSTMENT (RA)

The proposed RA component is based on the reconciliation of actual fuel, economy purchased power, emission allowance costs, environmental reagent costs, alternative energy portfolio standard and system loss adjustment to the FPP Component revenues for the three month period ending March 2011. The RA amount for the three month period ending March 2011 included in this filing is (\$1,090,186.13) for Residential customers and \$34,054.53 for Non-Residential customers and \$418,013.22 for Voltage Reduction customers. In addition to these RA amounts are \$202,344.81 for Residential customers and \$96,864.38 for Non-Residential customers and \$1,849.16 for Voltage Reduction customers which represents an updated adjustment to the 4th quarter 2010 RA amount filed in the 2nd quarter 2011 filing and is supported by the attached calculations on Page 5S thru 5X of 5 of Schedule 1. The total proposed RA is supported by the attached calculations on Page 3 of 5 of Schedule 1.

SYSTEM LOSS ADJUSTMENT (SLA)

The proposed SLA Component is based on the estimated system loss fuel cost to be incurred during the three month period ending September 2011. The total SLA calculated portion of the FPP Component is 0.0952 cents per kilowatt-hour for Residential and Non-Residential type customers, and 0.0436 cents per kilowatt-hour for Voltage Reduction type customers. From the number for Residential and Non-Residential type customers, the Company has subtracted a baseline rate of 0.1051 cents per kilowatt-hour that is already included in rates. From the number for Voltage Reduction type customers, the Company has subtracted a baseline rate of 0.0481 cents per kilowatt-hour that is already included in rates. Both rates are increased by 0.0106 cents per kilowatt-hour which represents a Synchronization Adjustment. Based upon this information, the proposed SLA should be established at 0.1058 cents per kilowatt-hour for Residential and Non-Residential type customers and at 0.0542 cents per kilowatt-hour for Voltage Reduction type customers. The proposed SLA is supported by the attached calculations on Page 4 of 5 of Schedule 1.

ATTACHMENT II

FUEL, ECONOMY PURCHASED POWER AND EMISSION ALLOWANCE COMPONENT

Based on the aforementioned projected includable fuel and economy purchased power cost data (FC) summarized on Page 1 of Schedule 1, the Emission Allowance Component (EA) on Page 2 of Schedule 1, the Environmental Reagent Component (ER) on Page 2 of Schedule 1, the Alternative Energy Portfolio Standard (AEPS) on Page 2 of Schedule 1, the Reconciliation Adjustment (RA) on Page 3 of Schedule 1, and the System Loss Adjustment (SLA) on Page 4 of Schedule 1, the Company proposes that a FPP Component of 3.2042 cents per kilowatt-hour be established for Residential type customers, 3.3743 cents per kilowatt-hour be established for Non-Residential type customers and 3.3227 cents per kilowatt-hour be established for Voltage Reduction type customers. These rates should be effective with bills rendered on and after July 1, 2011, to all consumers other than consumers taking generation service from Certified Retail Electric Suppliers. This will coincide with Cycle 1 billing for the July 2011 revenue month.

RE: In the Matter of The Application of Duke Energy)
Ohio to Modify its Fuel, Economy Purchased) Case No. 11-974-EL-FAC
Power Component of Its Market-Based Standard)
Service Offer for 2011)

Docketing Division:

Enclosed for filing are fifteen (15) copies of the following attachments containing the Facts, Data, and Other Information pertinent to Duke Energy Ohio, Inc. fuel, economy purchased power, and emission allowance of its proposed market-based standard service offer (PTC-FPP):

- (a) Attachment I – Statement of Fuel Procurement Policies and Practices and
- (b) Attachment II – Narrative statement and applicable quarterly FPP forms supporting the proposed calculation of the fuel, economy purchased power, emission allowance, environmental reagent, and alternative energy portfolio standard component of its market-based standard service offer for the base period of October through December 2011. The FPP component will be applied to bills rendered during the quarter ending December 2011.

Please time-stamp the enclosed extra copy and return for our file. Thank you for your timely assistance in this regard.

Very truly yours,

Lisa D. Steinkuhl

ATTACHMENT I

STATEMENT OF FUEL PROCUREMENT PRACTICES AND POLICIES

Duke Energy's ("Company") Commercial Asset Management Service (CAM) group is responsible for managing the power, fuel and emission allowance positions for the Company's operating units, including the Company's Ohio generation portfolio to provide a reliable, low cost, market-based supply of electricity for the Ohio customers.

CAMS is responsible for establishing and implementing the multi-commodity risk management strategy for power, fuel and emission allowances. CAM monitors and adjusts the optimal contract mix all the way through physical delivery. These adjustments result in the purchases or sales of Fuel, Emission Allowances, and Power for the approved term if the forward market allows them to transact. Fuel purchases are made through a combination of long-term and spot market purchases.

CAMS fuel procurement and Logistic groups include evaluating proposals for fuel and transportation contracts, selecting and qualifying suppliers and shippers, contract negotiation, administration and enforcement, and ongoing transportation maintenance and operations support. CAMS is responsible for complying with fuel procurement regulations.

CAMS evaluates its fuel and transportation services practices on a continuing basis and updates them as needed. This continuous self-evaluation ensures that CAMS follows the best available practices as they relate to the changing business environment of the Company and the industry, the effect of state and/or federal legislation, the orders or rules of any state commission, or any other event that may impact the Company's procurement and use of fuel.

A balancing of short-term and long-term contracts is an effective way to achieve critical portfolio goals such as:

- Effective management of market price risk
- Assurance of adequate and appropriate supply from reliable suppliers
- Competitive pricing
- Market intelligence
- Continuing evaluation of suppliers
- Flexibility in responding to changing market or economic conditions
- Efficient delivery of shipments and contract administration
- Coal basin balance and diversity

CAMS makes every effort to purchase fuels compatible for all Ohio generation portfolios. This decision making process also heavily involves Inputs from all station managers. Further, the cost of complying with environmental regulations regarding emissions is factored into purchasing decisions.

Coal quality specifications may include moisture, ash, calorific value, sulfur, volatility, grindability, chlorine, mineral ash analysis, fusion temperature. These parameters assure that the coal will be compatible with equipment operation and environmental regulations. Quality price adjustments will be made for deliveries not within contract specifications.

ATTACHMENT I

STATEMENT OF FUEL PROCUREMENT PRACTICES AND POLICIES

For longer term commitments, suppliers are generally evaluated on the basis of delivered cost (adjusted for MMBtu, SO₂, and freight), credit strength, proximity to transportation, and willingness to extend commercial terms. Additional evaluation is done, as needed, concerning by-product handling, disposal, and various environmental limits at the station sites. For short-term purchases, the evaluation focuses primarily on evaluated cost relative to the market.

ATTACHMENT II

DUKE ENERGY OHIO (DUKE)

NARRATIVE STATEMENT SUPPORTING ITS PROPOSED FPP COMPONENT

Duke Energy Ohio has calculated a proposed Quarterly Fuel, Economy Purchased Power Rider (PTC-FPP) of its standard service offer for the three-month projected period of October through December 2011.

The proposed FPP Rates are segregated into three types of customers, Residential, Non-Residential and Voltage Reduction customers. Depending on the type of customer, the appropriate rate will be applied to all bills, excluding consumers taking generation service from Certified Retail Electric Service providers, rendered on and after September 30, 2011, and will coincide with the billing of Cycle 1 of the October 2011 revenue month and remain in effect through December 2011.

The methodology for calculating the proposed FPP Component of 3.3137 cents per kilowatt-hour for Residential, 3.2402 cents per kilowatt-hour for Non-Residential and 3.1926 cents per kilowatt-hour for Voltage Reduction type customers is consistent with the Commission's Entry on Rehearing and is composed of the following components:

FUEL COMPONENT (FC)

The base period of October through December 2011 was utilized to calculate the proposed fuel and economy purchased power component (FC). The proposed FC is composed of three months projected includable fuel cost and economy purchased power data. The total FC calculated portion of the FPP Component is 2.8154 cents per kilowatt-hour for all types of customers. This proposed FC is supported by the attached calculations on Page 1 of 5 of Schedule 1.

EMISSION ALLOWANCES (EA)

The base period of October through December 2011 was utilized to calculate the emission allowance component (EA) for all types of customers. The proposed EA is composed of three months projected includable emission allowance data. The total EA calculated portion of the FPP Component is 0.0166 cents per kilowatt-hour for all types of customers. This proposed EA is supported by the attached calculations on Page 2 of 5 of Schedule 1.

Environmental Reagents (ER)

Per Stipulation in Case No. 09-770-EL-UNC filed with the Commission on 11/19/09, environmental reagents will be recovered in the PTC-FPP rather than the PTC-AAC effective with the January 2010 revenue month. The base period of October through December 2011 was utilized to calculate the environmental reagents component (ER) for all types of customers. The proposed ER is composed of three months projected includable environmental reagent data. The total ER calculated portion of the FPP Component is 0.1359 cents per kilowatt-hour for all types of customers. This proposed ER is supported by the attached calculations on Page 2 of 5 of Schedule 1.

ATTACHMENT II

Alternative Energy Portfolio Standard (AEPS)

Ohio Revised Code 4928.64 requires an electric distribution utility to supply a portion of its load with alternative utility resources. The costs incurred are avoidable by any consumer that has exercised choice of electricity supplier. The base period of October through December 2011 was utilized to calculate the alternative energy portfolio standard for all types of customers. The total alternative energy portfolio standard calculated portion of the FPP Component is 0.0341 cents per kilowatt-hour for all types of customers. This proposed alternative energy portfolio standard is supported by the attached calculations on Page 2 of 5 of Schedule 1.

RECONCILIATION ADJUSTMENT (RA)

The proposed RA amount includes (\$612,970) per Commission Order on August 24, 2011 in Case No. 10-974-EL-FAC. The proposed RA component is based on the reconciliation of actual fuel, economy purchased power, emission allowance costs, environmental reagent costs, alternative energy portfolio standard and system loss adjustment to the FPP Component revenues for the three month period ending June 2011. The RA amount for the three month period ending June 2011 included in this filing is \$1,830,146.77 for Residential customers and (\$200,529.36) for Non-Residential customers and \$906,772.57 for Voltage Reduction customers. In addition to these RA amounts are \$54,428.94 for Residential customers and \$17,812.11 for Non-Residential customers and (\$133.26) for Voltage Reduction customers which represents an updated adjustment to the 1st quarter 2011 RA amount filed in the 3rd quarter 2011 filing and is supported by the attached calculations on Page 5Y thru 5AD of 5 of Schedule 1. Also, there are RA amounts of \$39,765.13 for Residential customers and \$14,292.43 for Non-Residential customers and (\$739.14) for Voltage Reduction customers which represents an updated adjustment to the 4th quarter 2010 RA amount filed in the 2nd quarter 2011 filing and is supported by the attached calculations on Page 5S thru 5X of 5 of Schedule 1. The total proposed RA is supported by the attached calculations on Page 3 of 5 of Schedule 1.

SYSTEM LOSS ADJUSTMENT (SLA)

The proposed SLA Component is based on the estimated system loss fuel cost to be incurred during the three month period ending December 2011. The total SLA calculated portion of the FPP Component is 0.0877 cents per kilowatt-hour for Residential and Non-Residential type customers, and 0.0401 cents per kilowatt-hour for Voltage Reduction type customers. From the number for Residential and Non-Residential type customers, the Company has subtracted a baseline rate of 0.1051 cents per kilowatt-hour that is already included in rates. From the number for Voltage Reduction type customers, the Company has subtracted a baseline rate of 0.0481 cents per kilowatt-hour that is already included in rates. Both rates are increased by 0.0097 cents per kilowatt-hour which represents a Synchronization Adjustment. Based upon this information, the proposed SLA should be established at 0.0974 cents per kilowatt-hour for Residential and Non-Residential type customers and at 0.0498 cents per kilowatt-hour for Voltage

ATTACHMENT II

Reduction type customers. The proposed SLA is supported by the attached calculations on Page 4 of 5 of Schedule 1.

FUEL, ECONOMY PURCHASED POWER AND EMISSION ALLOWANCE COMPONENT

Based on the aforementioned projected includable fuel and economy purchased power cost data (FC) summarized on Page 1 of Schedule 1, the Emission Allowance Component (EA) on Page 2 of Schedule 1, the Environmental Reagent Component (ER) on Page 2 of Schedule 1, the Alternative Energy Portfolio Standard (AEPS) on Page 2 of Schedule 1, the Reconciliation Adjustment (RA) on Page 3 of Schedule 1, and the System Loss Adjustment (SLA) on Page 4 of Schedule 1, the Company proposes that a FPP Component of 3.3137 cents per kilowatt-hour be established for Residential type customers, 3.2402 cents per kilowatt-hour be established for Non-Residential type customers and 3.1926 cents per kilowatt-hour be established for Voltage Reduction type customers. These rates should be effective with bills rendered on and after September 30, 2011, to all consumers other than consumers taking generation service from Certified Retail Electric Suppliers. This will coincide with Cycle 1 billing for the October 2011 revenue month.
