Subject: Ramp-up Energy Efficiency in Ohio!

Dear PUCO Commissioners,

As an electric customer and an Ohioan I urge you to ensure all of Ohio's utilities are pursuing all cost-effective energy efficiency.

Many Ohio electric utilities are evaluating the economic viability of their aging fleets of coal plants, and retiring the oldest and dirtiest plants. This is critical to reducing air pollution and improving the health of our communities. Additionally, these coal plant retirements create the opportunity to transition to clean energy solutions.

Ohio's energy law calls for minimum annual energy efficiency benchmarks for utilities to meet. The law is creating jobs where they are needed most and securing our electric grid while saving customers millions.

Please ensure that utilities are pursuing all cost-effective energy efficiency as a way to curb pollution and create economic growth.

Sincerely,  
Mr. Ed Zehel

Subject: Ramp-up Energy Efficiency in Ohio!

Dear PUCO Commissioners,

As an electric customer and an Ohioan I urge you to ensure all of Ohio's utilities are pursuing all cost-effective energy efficiency measures. I also believe the time is ripe to encourage these companies to diversify into truly green energy solutions, and transition their companies into producers of solar and wind sourced energy.

Many Ohio electric utilities are evaluating the economic viability of their aging fleets of coal plants, and retiring the oldest and dirtiest plants. This is critical to reducing air pollution and improving the health of our communities. Additionally, these coal plant retirements create the opportunity to transition to clean energy solutions.

Ohio's energy law calls for minimum annual energy efficiency benchmarks for utilities to meet. The law is creating jobs where they are needed most and securing our electric grid while saving customers millions.

Subject: Ramp-up Energy Efficiency in Ohio!

Dear PUCO Commissioners,

As an electric customer and an Ohioan I urge you to ensure all of Ohio's utilities are pursuing all cost-effective energy efficiency. We should be making jobs for renewable energy technology, not fossil fuels.

Energy producers should also be required to clean up their operations. I know it can be done. I worked for a power company from 1981-2001. They were required to make numerous clean air modifications to their power plants. They maintained rates that were the lowest 5-10 companies nationally and returned a dividend to the share holders.

Many Ohio electric utilities are evaluating the economic viability of their aging fleets of coal plants, and retiring the oldest and dirtiest plants. This is critical to reducing air pollution and improving the health of our communities. Additionally, these coal plant retirements create the opportunity to transition to clean energy solutions.

Ohio's energy law calls for minimum annual energy efficiency benchmarks for utilities to meet. The law is creating jobs where they are needed most and securing our electric grid while saving customers millions.

Subject: Ramp-up Energy Efficiency in Ohio!

Dear PUCO Commissioners,

As an electric customer and an Ohioan I urge you to ensure all of Ohio's utilities are pursuing all cost-effective energy efficiency.

Many Ohio electric utilities are evaluating the economic viability of their aging fleets of coal plants, and retiring the oldest and dirtiest plants. This is critical to reducing air pollution and improving the health of our communities. Additionally, these coal plant retirements create the opportunity to transition to clean energy solutions.

Ohio's energy law calls for minimum annual energy efficiency benchmarks for utilities to meet. The law is creating jobs where they are needed most and securing our electric grid while saving customers millions.

Please ensure that utilities are pursuing all cost-effective energy efficiency as a way to curb pollution and create economic growth.

Sincerely,  
Mr. Neel Summers

Subject: Ramp-up Energy Efficiency in Ohio!

Dear PUCO Commissioners,

Even many Republicans have taken their heads out of the sand (thought I was going to describe a different place, huh?) and have acknowledged the reality of Global Warming. Although I admit it's a Local statistic, it is notable that today, February 29, 2012, in Akron, Ohio we experienced a new record high temperature of 68 degrees F (obviously, since recordkeeping began; but notable, nonetheless). Burning coal produces CO<sub>2</sub>, as well as more noxious pollutants such as Nitrogen and Sulfur Oxides, which contribute to acid rain as well as increased suffering for asthmatics.... oh, yes: and the Greenhouse Effect, driving the mechanism of Global Warming. Coal is Yesterday's heating and electrical generating source, just as Gasoline is Yesterday's automotive fuel. We absolutely must learn to employ alternative means, including conservation, to satisfy our energy needs for the Future... or there will BE no Future! As an electric customer and an Ohioan I urge you to ensure all of Ohio's utilities are pursuing all cost-effective energy efficiency.

Many Ohio electric utilities are evaluating the economic viability of their aging fleets of coal plants, and retiring the oldest and dirtiest plants. As an electric customer and an Ohioan I urge you to ensure all of Ohio's utilities are pursuing all cost-effective energy efficiency.

Many Ohio electric utilities are evaluating the economic viability of their aging fleets of coal plants, and retiring the oldest and dirtiest plants. This is critical to reducing air pollution and improving the health of our communities. Additionally, these coal plant retirements create the opportunity to transition to clean energy solutions.

Ohio's energy law calls for minimum annual energy efficiency benchmarks for utilities to meet. The law is creating jobs where they are needed most and securing our electric grid while saving customers millions.

Please ensure that utilities are pursuing all cost-effective energy efficiency as a way to curb pollution and create economic growth.

Sincerely,  
Mrs. Janet Hannel

You need to close Eastlake as it has been killing those in Lake County for years. Last time I heard they were putting out 438,000 tons of sulfur dioxide a year which is a major carcinogen. Wonder if that has anything to do with Lake County having the highest breast cancer rate in all Ohio and it is the smallest county.

You are the only ones that can help.

Many Ohio electric utilities are evaluating the economic viability of their aging fleets of coal plants, and retiring the oldest and dirtiest plants. This is critical to reducing air pollution and improving the health of our communities. Additionally, these coal plant retirements create the opportunity to transition to clean energy solutions.

Ohio's energy law calls for minimum annual energy efficiency benchmarks for utilities to meet. The law is creating jobs where they are needed most and securing our electric grid while saving customers millions.

Please ensure that utilities are pursuing all cost-effective energy efficiency as a way to curb pollution and create economic growth.

Sincerely,  
Michael Lee

Dear PUCO Commissioners,

As an electric customer and an Ohioan I urge you to ensure all of Ohio's utilities are pursuing all cost-effective energy efficiency.

Many Ohio electric utilities are evaluating the economic viability of their aging fleets of coal plants, and retiring the oldest and dirtiest plants. This is critical to reducing air pollution and improving the health of our communities. Additionally, these coal plant retirements create the opportunity to transition to clean energy solutions.

Ohio's energy law calls for minimum annual energy efficiency benchmarks for utilities to meet. The law is creating jobs where they are needed most and securing our electric grid while saving customers millions.

Please ensure that utilities are pursuing all cost-effective energy efficiency as a way to curb pollution and create economic growth.

Sincerely,  
Mrs. Patti Orley

Dear PUCO Commissioners,

To continue to move Ohio beyond coal, we need to replace coal with energy efficiency and clean energy. You have the power to make that happen.

Utilities must invest in energy efficiency and renewable energy to create jobs and to ensure a smooth transition to our state's clean energy future!

As GenOn decides to close their plants, they must develop transition plans with workers and local communities in mind. Energy efficiency and clean energy are key to the health of our local economies and our families.

Don't let Ohio utilities off the hook. We need strong energy efficiency and clean energy programs now. As an electric customer and an Ohioan, I urge you to ensure all of Ohio's utilities are pursuing all cost-effective energy efficiency.

Subject: Ramp-up Energy Efficiency in Ohio!

Dear PUCO Commissioners,

There are too many bad effects of fossil fuels like coal. They cause breathing problems, and asthma, COPD, and other respiratory illnesses are on the rise. If we can move beyond coal, to wind, (of which we have a great deal,) hydroelectric, and solar energy, we can increase our health and the health of future generations, which is a very good idea. As an electric customer and an Ohioan I urge you to ensure all of Ohio's utilities are pursuing all cost-effective energy efficiency.

Many Ohio electric utilities are evaluating the economic viability of their aging fleets of coal plants, and retiring the oldest and dirtiest plants. This is critical to reducing air pollution and improving the health of our communities. Additionally, these coal plant retirements create the opportunity to transition to clean energy solutions.

Ohio's energy law calls for minimum annual energy efficiency benchmarks for utilities to meet. The law is creating jobs where they are needed most and securing our electric grid while saving customers millions.

Please ensure that utilities are pursuing all cost-effective energy efficiency as a way to curb pollution and create economic growth.

Sincerely,  
Ms. Alyssa von Reuter
