Subject: Sierra Club - Ramping in Energy Efficiency in Ohio!

Dear Chairman Snitchler Todd Snitchler,

Energy efficiency has been saving Ohio customers over \$56M on their utility bills since the passage of SB221 in 2008. As an electric customer and an Ohioan I urge you to ensure all of Ohio's utilities are pursuing all cost-effective energy efficiency.

Many Ohio electric utilities are evaluating the economic viability of their aging fleets of coal plants, and retiring the oldest and dirtiest plants. This is critical to reducing air pollution and improving the health of our communities. Additionally, these coal plant retirements create the opportunity to transition to clean energy solutions.

Ohio's energy law calls for minimum annual energy efficiency benchmarks for utilities to meet. The law is creating jobs where they are needed most and securing our electric grid while saving customers millions.

Please ensure that utilities are pursuing all cost-effective energy efficiency as a way to curb pollution and create economic growth.

Sincerely,
Mr. Anthony Commarata

Fossil fuels served man for a long time, and now with the growth of human population and overdependency of ancient fossils as fuel, we have come to negatively affect our planet and our own health. We will to to use fossil fuels for some time yet, but we should be phasing them out- they are too destructive. Also destructive it the money influence from oil, coal and gas corporations who buy out our leaders. Ohio could have become a leader in new fuels but instead became more entrenched in the fossil fuels grips. The leadership needs changing.

Many Ohio electric utilities are evaluating the economic viability of their aging fleets of coal plants, and retiring the oldest and dirtiest plants. Dear Chairman Snitchler Todd Snitchler,

Energy efficiency has been saving Ohio customers over \$56M on their utility bills since the passage of SB221 in 2008. As an electric customer and an Ohioan I urge you to ensure all of Ohio's utilities are pursuing all cost-effective energy efficiency.

Many Ohio electric utilities are evaluating the economic viability of their aging fleets of coal plants, and retiring the oldest and dirtiest plants. This is critical to reducing air pollution and improving the health of our communities. Additionally, these coal plant retirements create the opportunity to transition to clean energy solutions.

Ohio's energy law calls for minimum annual energy efficiency benchmarks for utilities to meet. The law is creating jobs where they are needed most and securing our electric grid while saving customers millions.

Please ensure that utilities are pursuing all cost-effective energy efficiency as a way to curb pollution and create economic growth.

Sincerely,
Mr. Sean Speers

Todd Snitchler

Subject: Sierra Club - Ramping in Energy Efficiency in Ohio!

Dear Chairman Snitchler,

Ohio customers are looking to the Public Utilities Commission to ensure that utility companies do not cause excessive electric bill increases. Energy efficiency has saved Ohio customers over \$56M on their utility bills since the passage of SB221 in 2008. I urge you to ensure all of Ohio's utilities are pursuing all cost-effective energy efficiency.

We are seeing significant changes in energy production today, with old coal plants retiring and wind and solar energy being installed. These changes will improve the health of our communities and create new jobs.

At the same time, we need to ensure that First Energy and other utilities is pursuing all cost-effective energy efficiency as a way to curb pollution and create economic growth.

Sincerely,
Mrs. Teresa McHugh
