**I.        INTRODUCTION AND PURPOSE**

1    **Q.    PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

2    A.    My name is William Don Wathen Jr., and my business address is 139 East Fourth  
3        Street, Cincinnati, Ohio 45202.

4    **Q.    BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

5    A.    I am employed by Duke Energy Business Services LLC (DEBS) as Director of  
6        Rates and Regulatory Strategy for Ohio and Kentucky. DEBS provides various  
7        administrative and other services to Duke Energy Ohio, Inc., (Duke Energy Ohio or  
8        Company) and other affiliated companies of Duke Energy Corporation (Duke  
9        Energy).

10   **Q.   PLEASE   BRIEFLY   SUMMARIZE   YOUR   EDUCATIONAL**  
11   **BACKGROUND AND PROFESSIONAL EXPERIENCE.**

12   A.    I received Bachelor Degrees in Business and Chemical Engineering, and a Master of  
13        Business Administration Degree, all from the University of Kentucky. After  
14        completing graduate studies, I was employed by Kentucky Utilities Company as a  
15        planning analyst. In 1989, I began employment with the Indiana Utility Regulatory  
16        Commission as a senior engineer. From 1992 until mid-1998, I was employed by  
17        SVBK Consulting Group, where I held several positions as a consultant focusing  
18        principally on utility rate matters. I was hired by Cinergy Services, Inc., in 1998 as  
19        an Economic and Financial Specialist in the Budgets and Forecasts Department. In  
20        1999, I was promoted to the position of Manager, Financial Forecasts. In August  
21        2003, I was named to the position of Director - Rates. On December 1, 2009, I took  
22        the position of General Manager and Vice President of Rates, Ohio and Kentucky.

1 On July 3, 2012, as a result of the merger between Duke Energy and Progress  
2 Energy Corp., my title changed to Director of Rates and Regulatory Strategy for  
3 Ohio and Kentucky.

4 **Q. PLEASE SUMMARIZE YOUR RESPONSIBILITIES AS DIRECTOR OF**  
5 **RATES AND REGULATORY STRATEGY FOR OHIO AND KENTUCKY.**

6 A. As Director of Rates and Regulatory Strategy for Ohio and Kentucky, I am  
7 responsible for all state and federal rate matters involving Duke Energy Ohio and  
8 Duke Energy Kentucky, Inc.

9 **Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THE PUBLIC**  
10 **UTILITIES COMMISSION OF OHIO?**

11 A. Yes. I previously testified in a number of cases before the Public Utilities  
12 Commission of Ohio (Commission) and other regulatory commissions.

13 **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THESE**  
14 **PROCEEDINGS?**

15 A. On behalf of Duke Energy Ohio, I am submitting this testimony to support the  
16 reasonableness of the Company's request to increase its base electric distribution  
17 revenues; its requests for certain tariff modifications; and its requests for certain  
18 accounting authority related to the overall request. I discuss the background of  
19 Duke Energy Ohio's requested rate increase and the drivers for Duke Energy  
20 Ohio's current revenue deficiency.

**II. BACKGROUND AND DRIVERS FOR  
REQUESTED RATE INCREASE**

1   **Q.   WHEN DID THE COMMISSION APPROVE DUKE ENERGY OHIO'S**  
2   **CURRENT ELECTRIC DISTRIBUTION RATES?**

3   A.   Duke Energy Ohio's current electric distribution rates were approved by this  
4   Commission pursuant to an Order dated July 8, 2009, in Case No. 08-709-EL-  
5   AIR, *et al.* The test period in that proceeding was the twelve months ended  
6   December 31, 2008, and the date certain was March 31, 2008. The rates went  
7   into effect on or about July 13, 2009.

8   **Q.   WHY DOES DUKE ENERGY OHIO BELIEVE A DISTRIBUTION RATE**  
9   **INCREASE IS NECESSARY AT THIS TIME?**

10   A.   Since March 31, 2008, the date certain used in the prior rate case, Duke Energy  
11   Ohio has invested approximately \$450 million in capital additions and  
12   improvements to provide safe and reliable electric distribution service. Duke  
13   Energy Ohio's current rates are not sufficient to recover the costs associated with  
14   the investments made. In addition, distribution-related operation and maintenance  
15   (O&M) expenses have increased. For example, as explained in the Direct  
16   Testimony of Richard D. Harrell, the Company has implemented a number of  
17   programs (*e.g.*, the ground-line inspection program) since the previous rate case to  
18   increase reliability. The increased investment and operating costs prevent Duke  
19   Energy Ohio from earning a reasonable return on its distribution business, absent  
20   an increase in its current rates.

21           Duke Energy Ohio electric distribution operations are projected to earn a  
22   3.18 percent return on its rate base during the twelve-month test period ended

1 December 31, 2012. Although the most recent electric distribution case was  
2 approved without specifying a return, the return for the test year in the current  
3 case is well below the 9.10 percent return on rate base requested by the Company  
4 in that case and is also well below the Staff's recommended range of 8.34 percent  
5 to 8.87 percent.<sup>1</sup> More importantly, the 3.18 percent projected return on rate base  
6 is substantially below the 8.13 percent return on rate base being proposed in these  
7 proceedings. In order to earn a fair return of 8.13 percent, Duke Energy Ohio's  
8 electric distribution rates must be increased to generate approximately \$86.6  
9 million in incremental annual revenue to satisfy a total base electric distribution  
10 revenue requirement of approximately \$447 million, exclusive of all riders.

11 **Q. HOW DOES THE COMPANY'S ONGOING GRID MODERNIZATION**  
12 **PROGRAM IMPACT THE INCREASE BEING REQUESTED IN THESE**  
13 **PROCEEDINGS?**

14 A. It has no direct impact. Of the \$450 million in capital expenditures made since  
15 March 31, 2008, approximately \$138 million has been for grid modernization-  
16 related projects. As part of a settlement in Case No. 10-2326-GE-RDR (approved  
17 by the Commission on June 13, 2012), the Company will continue recovering  
18 implementation costs for the grid modernization via a separate rider, namely,  
19 Rider DR-IM. Another condition of the approved settlement is that the Company  
20 will file for new base rates around 2015 to incorporate the grid modernization  
21 investment into base rates after full deployment of the grid modernization  
22 program. Consequently, the revenue requirement being proposed in this electric

---

<sup>1</sup> *In the Matter of the Application of Duke Energy Ohio, Inc., for an Increase in Electric Distribution Rates*, Case No. 08-709-EL-AIR, *et al.*, Opinion and Order (July 8, 2009) and Staff Report (January 27, 2009).

1 distribution rate case excludes any recovery directly related to grid modernization.  
2 Duke Energy Ohio witness Peggy A. Laub addresses the adjustments required to  
3 accommodate the conditions of the June 13, 2012, order in the grid modernization  
4 case.

5 **Q. WHAT ARE THE PRIMARY DRIVERS FOR THIS EARNINGS**  
6 **ATTRITION?**

7 A. The primary drivers of the proposed \$86.6 million rate increase include:

- 8 ○ \$17.6 million is attributable to return on incremental plant investment;
- 9 ○ \$14.9 million is attributable to lower retail sales and reduced customer  
10 count;
- 11 ○ \$22.4 million is attributable to increased operating costs;
- 12 ○ \$18.8 million is attributable to higher property and other non-income  
13 related taxes; and
- 14 ○ \$18.1 million is attributable to increased depreciation and amortization  
15 expense.

16 Factors offsetting these rate increase drivers include:

- 17 ○ \$2.0 million is attributable to lower debt financing costs; and
- 18 ○ \$3.2 million higher miscellaneous revenue.

19 The balance of the increase is from miscellaneous other factors.

20 **Q. WHAT RATE RELIEF IS DUKE ENERGY OHIO REQUESTING IN**  
21 **THESE PROCEEDINGS?**

22 A. In its July 9, 2012, application, Duke Energy Ohio specifically requested that the  
23 Commission issue an Order:

- 24 ○ To increase base rates by \$86.6 million;

- 1           ○ To establish a deferral mechanism to track storm costs against a base  
2           amount; and
- 3           ○ To establish a Facilities Relocation - Mass Transportation Tariff (Rider  
4           FRT).

**III.       DUKE ENERGY OHIO'S PROCESS AND METHODOLOGY**  
**FOR PREPARATION OF ITS RATE CASE**

5   **Q.     WHAT IS THE OVERALL GOAL OF THE RATEMAKING PROCESS?**

6   A.     The overall goal of the ratemaking process is to give the regulated utility the  
7           opportunity to recover all of its prudently incurred operating expenses and to earn  
8           a fair return on its capital invested in the business. The Ohio Revised Code  
9           succinctly recognizes traditional ratemaking. In particular, R.C. 4905.22 states  
10          that all charges for service shall be just and reasonable and not more than allowed  
11          by law or by order of the Commission. That is precisely the objective of the  
12          normal ratemaking process and such a goal is to be achieved by charging rates  
13          that fairly assign the cost of service to the various customer classes.

14   **Q.     HOW DOES DUKE ENERGY OHIO PREPARE AN ELECTRIC**  
15          **DISTRIBUTION RATE CASE?**

16   A.     The lengthy and often complicated electric distribution rate case preparation  
17          process essentially consists of three primary steps: (1) determine the annual  
18          electric distribution revenue requirement; (2) develop a cost of service study that  
19          assigns and allocates the electric distribution revenue requirement to each retail  
20          rate schedule based on the applicable cost to serve; and (3) design the retail rates  
21          and rate schedules to yield the necessary retail revenue requirement.

1   **Q.   PLEASE GIVE AN OVERVIEW OF THE REVENUE REQUIREMENT**  
2       **DETERMINATION PROCESS EMPLOYED BY DUKE ENERGY OHIO.**

3   A.   Duke Energy Ohio's revenue requirement process focuses on determining: (1) the  
4       current level of capital invested in the electric distribution business; (2) the  
5       appropriate capital structure and cost of capital to finance the investment; and (3)  
6       the ongoing level of annual expenses related to operating and maintaining the  
7       electric distribution business. Duke Energy Ohio witness Laub supports the  
8       determination of Duke Energy Ohio's jurisdictional revenue requirement.

9   **Q.   PLEASE GIVE AN OVERVIEW OF THE RETAIL COST OF SERVICE**  
10       **STUDY PROCESS EMPLOYED BY DUKE ENERGY OHIO.**

11   A.   The electric distribution cost of service study assigns each component of revenue  
12       requirement formula to the various retail rate schedules. The components are  
13       directly assigned, or allocated, based on operational and/or accounting data with  
14       the objective being to allocate costs to customers in a manner that reflects the  
15       costs the Company incurs to serve them. The testimony of Duke Energy Ohio  
16       witness James E. Ziolkowski discusses Duke Energy Ohio's electric distribution  
17       cost of service study.

18   **Q.   WHAT ARE THE OBJECTIVES OF THE RATE DESIGN PROCESS?**

19   A.   The primary objectives of the rate design process are to develop rates that: (1)  
20       provide the utility with the opportunity to recover its annual revenue requirement;  
21       and (2) distribute the revenue recovery among customers within each retail rate  
22       schedule in a manner that is consistent with the cost of providing electric  
23       distribution service. Duke Energy Ohio witness James A. Riddle supports Duke

1 Energy Ohio's proposed rate design.

2 **Q. MR. STEPHEN DE MAY SPONSORS DUKE ENERGY OHIO'S**  
3 **CONSOLIDATED CAPITAL STRUCTURE AS OF MARCH 31, 2012.**  
4 **WHY DO YOU RECOMMEND USING DUKE ENERGY OHIO'S**  
5 **CAPITAL STRUCTURE FOR ESTABLISHING RATES IN THIS**  
6 **PROCEEDING?**

7 A. In addition to the long-standing precedent in Ohio for using the operating company's  
8 capital structure rather than the capital structure of the parent, I believe the Duke  
9 Energy Ohio consolidated capital structure is the appropriate capital structure to use  
10 as the basis for setting Duke Energy Ohio's electric distribution rates. The use of an  
11 alternative capitalization, such as Duke Energy's capital structure, would cause the  
12 rates in these proceedings to be impacted by a number of factors unrelated to Duke  
13 Energy Ohio's electric distribution operations. For instance, Duke Energy's  
14 capitalization reflects the practices and events of its regulated operations in Indiana,  
15 North Carolina, and South Carolina; its non-regulated domestic and international  
16 operations; and the spin-off of the gas pipeline businesses. It would be inappropriate  
17 to allow the capitalization practices and events in these affiliate activities to impact  
18 Duke Energy Ohio's electric distribution rates.

19 **Q. IS THE COMPANY MAKING ANY ADJUSTMENTS TO DUKE ENERGY**  
20 **OHIO'S CONSOLIDATED CAPITAL STRUCTURE FOR RATE**  
21 **SETTING PURPOSES?**

22 A. Yes. As described in the testimony of Company witness Daniel J. Reilly, Duke  
23 Energy Ohio's consolidated capital structure has been adjusted to eliminate the

1 impact of: (1) purchase accounting recorded pursuant to the Duke Energy/Cinergy  
2 Corp (Cinergy)<sup>2</sup> merger; and (2) equity associated with Duke Energy North  
3 America generating assets acquired by Duke Energy Ohio in the 2006 Duke  
4 Energy/Cinergy merger (*i.e.*, the DENA assets). Although the DENA assets were  
5 transferred from being directly owned by Duke Energy Ohio to a subsidiary, there  
6 was no immediate impact on Duke Energy Ohio's consolidated balance sheet as  
7 these assets are still under the Duke Energy Ohio corporate structure and,  
8 therefore, should be removed.

9 **Q. ARE THE ADJUSTMENTS TO THE CAPITAL STRUCTURE BEING**  
10 **PROPOSED HERE NEW?**

11 A. No. Duke Energy Ohio has filed two retail rate cases since the Duke  
12 Energy/Cinergy Merger was consummated; one for electric distribution (Case No.  
13 08-709-EL-AIR, *et al.*) and one for gas distribution (Case No. 07-589-GA-AIR, *et*  
14 *al.*). The capital structure adjustments being proposed in the current case are the  
15 same as adjustments made, and accepted by the Commission, in these two prior  
16 cases. It is worth noting that the impact of all these adjustments is to reduce the  
17 Company's equity ratio and, consequently, reduce the Company's jurisdictional  
18 revenue requirement.

19 **Q. DESCRIBE THE IMPLICATIONS OF THE COMPANY'S**  
20 **COMMITMENT TO TRANSFER ITS LEGACY GENERATION ASSETS**  
21 **TO AN AFFILIATE, AS IT RELATES TO THIS RATE APPLICATION.**

---

<sup>2</sup> *In the Matter of the Joint Application of Cinergy Corp., on Behalf of the Cincinnati Gas & Electric Company, and Duke Energy Holding Corp. for Consent and Approval of a Change of Control of The Cincinnati Gas & Electric Company, Case No. 05-732-EL-MER, et al., Finding and Order (December 21, 2005).*

1 A. As part of the Commission-approved stipulation in the Company's most recent  
2 standard service offer application, Case No. 11-3549-EL-SSO, *et al.*, Duke  
3 Energy Ohio agreed to transfer its direct ownership interest in all of its Legacy  
4 Generation fleet to an affiliate or subsidiary, by December 31, 2014.<sup>3</sup> As  
5 discussed by Company witness De May, the asset transfer will result in some  
6 recapitalization; however, as of the date of this filing, there is insufficient  
7 information upon which to base any adjustments to the Company's March 31,  
8 2012, date certain capital structure to be used in this case. Consequently, the  
9 impending asset transfer has no impact on the rates being proposed in this rate  
10 application.

11 **Q. AFTER ADJUSTING THE ACTUAL CAPITAL STRUCTURE TO**  
12 **ELIMINATE THE IMPACT OF PURCHASE ACCOUNTING AND TO**  
13 **ELIMINATE THE EQUITY ASSOCIATED WITH THE MIDWEST GAS**  
14 **ASSETS, WHAT IS THE CAPITALIZATION OF DUKE ENERGY OHIO**  
15 **FOR PURPOSES OF THESE PROCEEDINGS?**

16 A. Duke Energy Ohio's consolidated capital structure at March 31, 2012, as  
17 adjusted, is approximately 46.70 percent debt and 53.30 percent common equity.  
18 This is shown on Schedule D-1.

19 It should be noted that the capital structure underlying the Company's  
20 requested revenue requirement is well above the limits established by the Federal  
21 Energy Regulatory Commission (FERC) and this Commission. The FERC and

---

<sup>3</sup> *In the Matter of the Application of Duke Energy Ohio, Inc., for Authority to Establish a Standard Service Offer Pursuant to Section 4928.143, Revised Code, in the Form of an Electric Security Plan, Accounting Modifications, and Tariffs for Generation Service*, Case No. 11-3549-EL-SSO, *et al.*, Stipulation and Recommendation (October 24, 2011).

1 this Commission imposed a minimum limit on the equity ratio of 30 percent. The  
2 limit reflects the FERC orders that approved the Duke Energy/Cinergy merger<sup>4</sup>  
3 and the Commission orders that approved an accounting modification to address  
4 the impact of required accounting treatment for the purchase accounting  
5 associated with the Duke Energy/Cinergy merger from 2006.<sup>5</sup>

#### IV. NEW TARIFF PROPOSAL

6 **Q. PLEASE DESCRIBE THE SIGNIFICANT NEW RATE AND TARIFF THE**  
7 **COMPANY IS PROPOSING IN THESE PROCEEDINGS.**

8 A. As part of its application in these proceedings, the Company is proposing to create  
9 a new tariff for relocating its facilities, Rider FRT, Facility Relocation – Mass  
10 Transportation. Duke Energy Ohio witness Harrell discusses the operational  
11 issues involved in the new tariff but, generally, the tariff seeks to ensure that the  
12 principles of cost causation are aligned with cost recovery. Traditional  
13 ratemaking necessarily involves a level of socialization for certain costs incurred  
14 by a utility. Utilities frequently have to relocate electric and gas facilities for  
15 private and public construction programs and, often, the cost is simply  
16 incorporated into base rates and recovered over all distribution rates. Other times,  
17 the cost to relocate is paid for directly by the party requesting the relocation and  
18 the utility's other customers have no burden for that cost.

19 Rider FRT focuses on recovery of the costs of relocations due to certain  
20 projects required by governmental subdivisions. In particular, Rider FRT will be

---

<sup>4</sup> Cincinnati Gas and Electric Company d/b/a Duke Energy Ohio and Union Light, Heat and Power Company, d/b/a Duke Energy Kentucky, FERC Order, EL06-66-000.

<sup>5</sup> In the Matter of Duke Energy Ohio's Application for Change in Accounting Methods, Case No. 09-620-GE-AAM and Case No. 11-5985-GE-AAM.

1 a means for the Company to recover the cost of relocations associated with mass  
2 transportation projects initiated by governmental subdivisions. The rider is  
3 designed to give the governmental subdivision the option of paying the Company  
4 directly for the cost of relocation or, alternatively, to charge only those customers  
5 residing within its governmental boundaries for the cost of the project. For  
6 example, the city of Cincinnati (City) is requesting that Duke Energy Ohio  
7 relocate facilities, at considerable expense, to accommodate its proposed streetcar  
8 project. Under Rider FRT, the City will have the option either to pay for the cost  
9 directly to Duke Energy Ohio either in lump sum or over time (Option 1) or to  
10 allow the Company to collect, via a charge on the customers' bills, only from  
11 customers located within the city of Cincinnati, the cost of relocation over a  
12 period of time (Option 2). The charge under either option would be sufficient to  
13 pay for the cost of relocating the facilities, plus a carrying charge at the weighted-  
14 average cost of capital established in these proceedings.

15 **Q. IS THE COMPANY PROPOSING RATES FOR RIDER FRT AT THIS**  
16 **TIME?**

17 **A.** No. The tariff has not yet been approved by the Commission; consequently, no  
18 governmental entity has had the opportunity to utilize this tariff. Upon approval  
19 of this tariff, when an eligible governmental entity seeks the second option under  
20 the tariff, Duke Energy Ohio will submit its calculations to the Commission for its  
21 review and approval before implementing the charges. The Company will accrue  
22 carrying costs on any unrecovered balance of the eligible relocation cost until  
23 recovery is completed.

**V. DEFERRAL REQUESTS**

1   **Q.    IS THE COMPANY MAKING ANY NEW PROPOSALS REGARDING**  
2       **STORM COSTS?**

3    A.    Yes. As recent experience has shown, storm costs can be quite volatile and can  
4       have a significant impact on the Company's earnings. Duke Energy Ohio is  
5       proposing to establish a regulatory asset account to defer storm costs over a base  
6       amount to be established in the test year revenue requirement in these  
7       proceedings. To the extent storm costs are less than the amount in base rates,  
8       there will be a credit to the same account. Any monthly positive or negative  
9       balance in this deferral account would accrue a carrying cost at the Company's  
10      long-term cost of debt as approved in these proceedings. At the time of the  
11      Company's next base rate case, the balance of the regulatory asset, positive or  
12      negative, will be amortized over a period to be proposed by the Company and  
13      recovered in base rates to be set at that time.

14   **Q.    WHAT IS THE BENEFIT OF THIS PROPOSAL FOR CUSTOMERS**  
15       **AND/OR SHAREHOLDERS?**

16   A.    Storm costs are volatile. In 2008, Duke Energy Ohio's storm costs were over \$30  
17      million but, for the last four years, such costs have trended around \$5 million,  
18      excluding the Hurricane Ike event in 2008. For the test year used in these  
19      proceedings, the amount of storm costs to be recovered in base rates is about \$4.4  
20      million. The test year is comprised mostly of budgeted data; so, it is reasonable  
21      that the storm cost in base rates should be fairly representative of the Company's  
22      expected storm costs and that the figure is fairly close to recent history supports

1 that argument. There will be years when storm costs are lower than the amount  
2 being recovered in base rates and there will be years when storm costs are higher  
3 than the amount being recovered in base rates.

4 Storm costs can have a significant impact on the Company's ability to  
5 maintain the reliability of its distribution system. Although the Company includes  
6 an amount in its annual budgeting process to cover the cost of storms, a major  
7 storm event can create a challenge for the Company to fund other operating and  
8 capital needs of the utility in a given year. Allowing the Company to defer  
9 excessive storm costs in a given year (and offset the deferral when the storm costs  
10 are less than normal) is an equitable and sensible way of ensuring that the  
11 Company is not faced with an economic challenge to fund normal spending  
12 requirements to maintain its safe and reliable distribution system.

13 **Q. HAS THE COMMISSION APPROVED THIS TYPE OF MECHANISM IN**  
14 **PRIOR CASES?**

15 A. Yes. The Commission has recognized the importance of this type of mechanism  
16 in at least two prior electric cases. In Case No. 07-553-EL-AAM, *et al.*, the  
17 Commission approved a storm deferral mechanism for the First Energy operating  
18 companies and, more recently, in Case No. 11-346-EL-SSO, *et al.*, the  
19 Commission initially approved a stipulation that included a similar storm damage  
20 deferral mechanism request made by Ohio Power Company and Columbus  
21 Southern Power Company (now, collectively known as AEP Ohio) and supported  
22 by the Commission Staff.

## **VI. CONCLUSION**

1   **Q.   HAVE YOU REVIEWED DUKE ENERGY OHIO'S APPLICATION IN**  
2   **THESE PROCEEDINGS?**

3   A.   Yes. I have also reviewed the testimony and exhibits of all witnesses. I believe  
4       that the Company's total electric distribution revenue requirement is properly  
5       computed, the costs of service are properly allocated to customer classes, and the  
6       rate design is equitable.

7   **Q.   DO YOU HAVE AN OPINION REGARDING WHETHER DUKE**  
8   **ENERGY OHIO'S RATE REQUEST IS REASONABLE?**

9   A.   Yes.

10  **Q.   PLEASE STATE YOUR OPINION.**

11  A.   Duke Energy Ohio's rate request is fair and reasonable. The date certain in Duke  
12       Energy Ohio's last rate case was March 31, 2008, and the date certain for this  
13       case is March 31, 2012. Despite the four years of inflationary pressures and  
14       substantial continuing capital investment in its distribution system, Duke Energy  
15       Ohio is requesting an overall increase in rates that will result in an approximate  
16       5.1 percent over the total electric rates that customers now pay. Through  
17       aggressive cost management practices, the Company has been able to hold its  
18       increase request to a reasonable level.

19  **Q.   DOES THIS CONCLUDE YOUR PRE-FILED DIRECT TESTIMONY?**

20  A.   Yes.
