Subject: Improve FirstEnergy's energy efficiency plan

Dear Todd Snitchler,

[Please withhold my email and home addresses from the public record.]

I urge you and the rest of the Public Utilities Commission of Ohio to use your power to improve FirstEnergy's 2013-2015 energy efficiency plan.

The plan as-submitted is flawed. Rather than working with retailers, homebuilders, and contractors to make energy efficiency the easy choice, FirstEnergy proposes to again send big packages of light bulbs to customers. Rather than helping manufacturers proactively manage their energy use, the FirstEnergy proposes to merely account for things that would have happened without their involvement.

Other utilities in Ohio are showing how to do efficiency right. AEP's 2012-2014 energy efficiency plan, approved by the Commission earlier this year, puts AEP on the path to meeting its aggressive energy efficiency targets. AEP is investing \$300 million in energy efficiency over three years, helping stores sell energy efficient televisions and light bulbs, helping its largest manufacturers manage their energy use, and providing extra efficiency help to small businesses.

Holding FirstEnergy accountable to Ohio's energy efficiency benchmarks will improve Ohio's economy and environment. Energy efficiency is the cheapest way to serve energy needs, and many of the leading companies in the efficiency industry like GE Lighting and Owens-Corning are headquartered right here in Ohio.

Once again, we urge you to improve FirstEnergy's energy efficiency plan, and make the Company proactively help its customers reduce their energy use.

Sincerely,
Mrs. Kathleen Morris

Dear Todd Snitchler,

[Please withhold my email and home addresses from the public record.]

I urge you and the rest of the Public Utilities Commission of Ohio to use your power to improve FirstEnergy's 2013-2015 energy efficiency plan and to force FE to discontinue implying FE is giving away money - FE has zero money of its own, the company is playing games - word and otherwise - with subscribers money.

The plan as-submitted is flawed. Rather than working with retailers, homebuilders, and contractors to make energy efficiency the easy choice, FE proposes to again send big packages of light bulbs to customers - in all likelihood foreign made.

Rather than helping manufacturers proactively manage their energy use, FE proposes to merely account for things that would have happened without their involvement.

Other utilities in Ohio are showing how to do efficiency right. Although an exceedingly unreliable provider of electricity, American Electric Power (AEP) has issued a 2012-2014 energy efficiency plan approved by the Commission earlier this year, which puts AEP on the path to meeting its aggressive energy efficiency targets. AEP is investing \$300 million of subscribers money in energy efficiency over three years, helping stores sell energy efficient televisions and light bulbs - both likely foreign made - while helping its largest manufacturers manage their energy use, and providing extra efficiency help to small businesses.

Holding FE accountable to Ohio's energy efficiency benchmarks will improve Ohio's economy and environment. Energy efficiency is the cheapest way to serve energy needs, and many of the leading companies in the efficiency industry like GE Lighting and Owens-Corning are headquartered right here in Ohio.

Once again, we urge you to improve FE's energy efficiency plan, and make the Company proactively help its customers reduce their energy use.

Sincerely,
Mr. Fred Strawser

The plan as-submitted is flawed. Rather than working with retailers, homebuilders, and contractors to make energy efficiency the easy choice, FirstEnergy proposes to again send big packages of light bulbs to customers. Rather than helping manufacturers proactively manage their energy use, the FirstEnergy proposes to merely account for things that would have happened without their involvement.

Other utilities in Ohio are showing how to do efficiency right. AEP's 2012-2014 energy efficiency plan, approved by the Commission earlier this year, puts AEP on the path to meeting its aggressive energy efficiency targets. AEP is investing \$300 million in energy efficiency over three years, helping stores sell energy efficient televisions and light bulbs, helping its largest manufacturers manage their energy use, and providing extra efficiency help to small businesses.

Holding FirstEnergy accountable to Ohio's energy efficiency benchmarks will improve Ohio's economy and environment. Energy efficiency is the cheapest way to serve energy needs, and many of the leading companies in the efficiency industry like GE Lighting and Owens-Corning are headquartered right here in Ohio.

Once again, we urge you to improve FirstEnergy's energy efficiency plan, and make the Company proactively help its customers reduce their energy use.

Sincerely,
Mr. Thomas Hasek

Other utilities in Ohio are showing how to do efficiency right. AEP's 2012-2014 energy efficiency plan, approved by the Commission earlier this year, puts AEP on the path to meeting its aggressive energy efficiency targets. AEP is investing \$300 million in energy efficiency over three years, helping stores sell energy efficient televisions and light bulbs, helping its largest manufacturers manage their energy use, and providing extra efficiency help to small businesses.

Holding FirstEnergy accountable to Ohio's energy efficiency benchmarks will improve Ohio's economy and environment. Energy efficiency is the cheapest way to serve energy needs, and many of the leading companies in the efficiency industry like GE Lighting and Owens-Corning are headquartered right here in Ohio.

Once again, we urge you to improve FirstEnergy's energy efficiency plan, and make the Company proactively help its customers reduce their energy use.

Sincerely,
Mrs. Mary Klasen

Subject: Improve FirstEnergy's energy efficiency plan

Dear Todd Snitchler,

[Please withhold my email and home addresses from the public record.]

I urge you and the rest of the Public Utilities Commission of Ohio to use your power to improve FirstEnergy's 2013-2015 energy efficiency plan.

The plan as-submitted is flawed. Rather than working with retailers, homebuilders, and contractors to make energy efficiency the easy choice, FirstEnergy proposes to again send big packages of light bulbs to customers. Rather than helping manufacturers proactively manage their energy use, the FirstEnergy proposes to merely account for things that would have happened without their involvement.

Other utilities in Ohio are showing how to do efficiency right. AEP's 2012-2014 energy efficiency plan, approved by the Commission earlier this year, puts AEP on the path to meeting its aggressive energy efficiency targets. AEP is investing \$300 million in energy efficiency over three years, helping stores sell energy efficient televisions and light bulbs, helping its largest manufacturers manage their energy use, and providing extra efficiency help to small businesses.

AEP is investing \$300 million in energy efficiency over three years, helping stores sell energy efficient televisions and light bulbs, helping its largest manufacturers manage their energy use, and providing extra efficiency help to small businesses.

Holding FirstEnergy accountable to Ohio's energy efficiency benchmarks will improve Ohio's economy and environment. Energy efficiency is the cheapest way to serve energy needs, and many of the leading companies in the efficiency industry like GE Lighting and Owens-Corning are headquartered right here in Ohio.

Once again, we urge you to improve FirstEnergy's energy efficiency plan, and make the Company proactively help its customers reduce their energy use.

Sincerely,
Ms. Christine Hughes

Subject: Improve FirstEnergy's energy efficiency plan

Dear Todd Snitchler,

[Please withhold my email and home addresses from the public record.]

I urge you and the rest of the Public Utilities Commission of Ohio to use your power to improve FirstEnergy's 2013-2015 energy efficiency plan.

The plan as-submitted is flawed. Rather than working with retailers, homebuilders, and contractors to make energy efficiency the easy choice, FirstEnergy proposes to again send big packages of light bulbs to customers. Rather than helping manufacturers proactively manage their energy use, the FirstEnergy proposes to merely account for things that would have happened without their involvement.

Other utilities in Ohio are showing how to do efficiency right. AEP's 2012-2014 energy efficiency plan, approved by the Commission earlier this year, puts AEP on the path to meeting its aggressive energy efficiency targets. AEP is investing \$300 million in energy efficiency over three years, helping stores sell energy efficient televisions and light bulbs, helping its largest manufacturers manage their energy use, and providing extra efficiency help to small businesses.

Holding FirstEnergy accountable to Ohio's energy efficiency benchmarks will improve Ohio's economy and environment. Energy efficiency is the cheapest way to serve energy needs, and many of the leading companies in the efficiency industry like GE Lighting and Owens-Corning are headquartered right here in Ohio.

Once again, we urge you to improve FirstEnergy's energy efficiency plan, and make the Company proactively help its customers reduce their energy use.

Sincerely,
Ms. Frankie Leighton

Holding FirstEnergy accountable to Ohio's energy efficiency benchmarks will improve Ohio's economy and environment. Energy efficiency is the cheapest way to serve energy needs, and many of the leading companies in the efficiency industry like GE Lighting and Owens-Corning are headquartered right here in Ohio.

Once again, we urge you to improve FirstEnergy's energy efficiency plan, and make the Company proactively help its customers reduce their energy use.

Sincerely,
Mr. David Strasser

Subject: Improve FirstEnergy's energy efficiency plan

Dear Todd Snitchler,

[Please withhold my email and home addresses from the public record.]

I urge you and the rest of the Public Utilities Commission of Ohio to use your power to improve FirstEnergy's 2013-2015 energy efficiency plan.

The plan as-submitted is flawed. Rather than working with retailers, homebuilders, and contractors to make energy efficiency the easy choice, FirstEnergy proposes to again send big packages of light bulbs to customers. Rather than helping manufacturers proactively manage their energy use, the FirstEnergy proposes to merely account for things that would have happened without their involvement.

Other utilities in Ohio are showing how to do efficiency right. AEP's 2012-2014 energy efficiency plan, approved by the Commission earlier this year, puts AEP on the path to meeting its aggressive energy efficiency targets. AEP is investing \$300 million in energy efficiency over three years, helping stores sell energy efficient televisions and light bulbs, helping its largest manufacturers manage their energy use, and providing extra efficiency help to small businesses.

Holding FirstEnergy accountable to Ohio's energy efficiency benchmarks will improve Ohio's economy and environment. Energy efficiency is the cheapest way to serve energy needs, and many of the leading companies in the efficiency industry like GE Lighting and Owens-Corning are headquartered right here in Ohio.

Once again, we urge you to improve FirstEnergy's energy efficiency plan, and make the Company proactively help its customers reduce their energy use.

Sincerely,
Mr. Dennis Woolley

Subject: Improve FirstEnergy's energy efficiency plan

Dear Todd Snitchler,

[Please withhold my email and home addresses from the public record.]

I urge you and the rest of the Public Utilities Commission of Ohio to use your power to improve FirstEnergy's 2013-2015 energy efficiency plan.

The plan as-submitted is flawed. Rather than working with retailers, homebuilders, and contractors to make energy efficiency the easy choice, FirstEnergy proposes to again send big packages of light bulbs to customers. Rather than helping manufacturers proactively manage their energy use, the FirstEnergy proposes to merely account for things that would have happened without their involvement.

Other utilities in Ohio are showing how to do efficiency right. AEP's 2012-2014 energy efficiency plan, approved by the Commission earlier this year, puts AEP on the path to meeting its aggressive energy efficiency targets. AEP is investing \$300 million in energy efficiency over three years, helping stores sell energy efficient televisions and light bulbs, helping its largest manufacturers manage their energy use, and providing extra efficiency help to small businesses.

Holding FirstEnergy accountable to Ohio's energy efficiency benchmarks will improve Ohio's economy and environment. Energy efficiency is the cheapest way to serve energy needs, and many of the leading companies in the efficiency industry like GE Lighting and Owens-Corning are headquartered right here in Ohio.

Once again, we urge you to improve FirstEnergy's energy efficiency plan, and make the Company proactively help its customers reduce their energy use.

Sincerely,
Mrs. sue lynch

Subject: Improve FirstEnergy's energy efficiency plan

Dear Todd Snitchler,

[Please withhold my email and home addresses from the public record.]

Are you aware how many air quality alert days there have been in Ohio this year? With the record heat, air conditioners and electric meters have been running nonstop.

Energy conservation and energy efficiency of companies like FirstEnergy must be of the highest priority.

As a result I urge you and the rest of the Public Utilities Commission of Ohio to use your power to improve FirstEnergy's 2013-2015 energy efficiency plan. We need big action from the utility companies, not token gestures like those offered by FirstEnergy in its severally flawed plan.

FirstEnergy proposes to again send big packages of light bulbs to customers. Rather than helping manufacturers proactively manage their energy use, the FirstEnergy proposes to merely account for things that would have happened without their involvement.

Other utilities in Ohio are showing how to do efficiency right. AEP's 2012-2014 energy efficiency plan, approved by the Commission earlier this year, puts AEP on the path to meeting its aggressive energy efficiency targets. Subject: Improve FirstEnergy's energy efficiency plan

Dear Todd Snitchler,

[Please withhold my email and home addresses from the public record.]

I urge you and the rest of the Public Utilities Commission of Ohio to use your power to improve FirstEnergy's 2013-2015 energy efficiency plan.

The plan as-submitted is flawed. Rather than working with retailers, homebuilders, and contractors to make energy efficiency the easy choice, FirstEnergy proposes to again send big packages of light bulbs to customers. Rather than helping manufacturers proactively manage their energy use, the FirstEnergy proposes to merely account for things that would have happened without their involvement.

Other utilities in Ohio are showing how to do efficiency right. AEP's 2012-2014 energy efficiency plan, approved by the Commission earlier this year, puts AEP on the path to meeting its aggressive energy efficiency targets. AEP is investing \$300 million in energy efficiency over three years, helping stores sell energy efficient televisions and light bulbs, helping its largest manufacturers manage their energy use, and providing extra efficiency help to small businesses.

Holding FirstEnergy accountable to Ohio's energy efficiency benchmarks will improve Ohio's economy and environment. Energy efficiency is the cheapest way to serve energy needs, and many of the leading companies in the efficiency industry like GE Lighting and Owens-Corning are headquartered right here in Ohio.

Once again, we urge you to improve FirstEnergy's energy efficiency plan, and make the Company proactively help its customers reduce their energy use.

Sincerely,
Mr. Charles Kiskaddon
