No. 08-1344-GA-EXM.

AN ALLOCATION METHODOLOGY PROPOSAL

SUBMITTED ON BEHALF OF THE STAFF OF THE PUBLIC UTILITIES COMMISSION OF OHIO

BACKGROUND

The Commission in its March 20, 2013 entry on rehearing recognized that prior to Columbia Gas of Ohio Inc.'s ("Columbia") exit of the merchant function for non-residential customers, certain details regarding the customer allocation methodology needed to be discussed and resolved among the parties. In this entry the Commission directed Staff to meet with Columbia and its stakeholder group to discuss and work out these details and file an allocation methodology for review and approval within 90 days of the date of the entry. The Commission specified the non-residential Choice customers¹ allocation methodology was to include:

[&]quot;Choice customers" means customers that are eligible to participate in Columbia's CHOICE program and receive their commodity gas through a bilateral contract with a Choice supplier.

- (i) A formula to calculate each MVR² Choice supplier's market share of non-residential Choice customers, as described in the entry;
- (ii) A formula to calculate each MVR SCO³ supplier's market share of non-residential Choice customers, as described in the entry;
- (iii) A formula to calculate how the residual customers will be allocated under the methodology in finding in the entry.

Staff met with Columbia and the stakeholder group on May 3rd and 14th, 2013.

Columbia at the May 3rd meeting proposed an algorithm to carry out the allocation methodologies and a methodology for allocating residual non-residential SCO customers not initially allocated because an otherwise entitled SCO or Choice suppliers chose not to be an MVR supplier. There was general support within the stakeholder group for Columbia's algorithm to carry out the allocation methodology, but it took additional discussion for the stakeholders to come to a consensus proposal around methodology. It should be noted that the Office of the Consumers' Counsel ("OCC") as a member of the stakeholder group attended the May 14th meeting, however since the discussion related exclusively to non-residential customers, OCC did not participate other than to request that it be noted in the proposal, that the adopted framework for the MVR allocation

² "MVR" means the monthly variable rate.

^{3 &}quot;SCO" means the standard choice offer.

None of the stakeholders opposed the consensus proposal, though there was not total unanimous support.

methodology is only for non-residential customers and in no way establishes a precedent for any future exit by Columbia for residential customers⁵.

ALGORITHM FOR MVR ALLOCATION

The Commission directed Staff, Columbia, and the stakeholder group to develop a methodology and algorithm that would result in an allocation of non-residential SCO customers to MVR suppliers. Below is a written explanation of the proposed methodology and algorithm. The attached Appendix is a worksheet detailing an example as it relates to the described methodology.

STEP 1: DETERMINATION OF INITIAL MARKET OWNERSHIP

The first step of the allocation methodology begins with the identification of non-residential customer accounts which are being served by an SCO supplier or Choice supplier in the month immediately preceding the date of exit. Once identified, the SCO customers will be allocated between two groups, one made up of Choice Suppliers⁶ and the other made up of SCO Suppliers⁷ who served SCO customers during the time period

The Commission in its January 09, 2013 Opinion and Order at page 31 made this point when it clarified that approval of the provisions in the stipulation, for nonresidential customers exiting the merchant function, in no way determined the reasonableness of exiting of the merchant function for residential customers.

⁶ "Choice Supplier" means a certified retail natural gas supplier participating in Columbia's Customer CHOICE Program.

[&]quot;SCO Supplier" means a winning SCO Auction bidder that has received the right, and has the obligation, to provide natural gas commodity for a specified list of Choice eligible customers that have not elected a Competitive Retail Natural Gas Supplier and that are not served through Governmental Aggregation Programs.

beginning January 9, 2013⁸ and ending in the month immediately preceding the date of exit. Accordingly, the SCO Supplier Group's percentage is calculated by dividing the total number of non-residential SCO customers by the total number of Choice Eligible customers;⁹ and the Choice Group percentage is calculated by the dividing the total number of non-residential Choice customers also by the total number of Choice Eligible customers. The resulting percentages are then multiplied by the total number of remaining SCO customers to obtain the number of SCO customers to allocate to the SCO Supplier Group and the Choice Supplier Group. (See columns 8, 12, and 13 of the attached Appendix for SCO Suppliers, and columns 8, 12, and 13 for Choice Suppliers).

STEP 2: INITIAL ALLOCATION OF SCO CUSTOMERS

The second step involves allocating the SCO customers between suppliers within the SCO Supplier Group and within the Choice Supplier Group.

SCO Supplier Group -- The allocation of customers within the SCO Supplier Group is based on the percentage of qualifying tranches held by each supplier in the SCO Supplier Group. That percentage is calculated by dividing each supplier's tranches accumulated during the tranche period by the total number of tranches awarded during the tranche period. The resulting percentages are then multiplied by the total number of non-resi-

The January 9, 2013 start date includes the combined SSO*/SCO auctions for the 2012/2013 program. (*"SSO" means standard service offer).

Choice Eligible customers, as used in this formula, is determined by the number of SCO non-residential customers + Choice non-residential customers.

dential customers allocated to the SCO Supplier Group in Step 1 above, to arrive at the number of customers allocated to each supplier in the SCO Supplier Group. (See columns 4 through 8, 12 and 13 of the Appendix).

Choice Supplier Group -- The allocation of customers within the Choice Supplier Group is based on the percentage of the non-residential Choice market served, including governmental aggregations. That percentage is calculated by dividing each supplier's Choice customers by the total number of Choice customers for all Choice suppliers in the month immediately preceding the date of exit. The resulting percentages are then multiplied by the total number of SCO customers allocated to the Choice Supplier Group in Step 1 above, to arrive at the number of customers allocated to each supplier in the Choice Supplier Group. (See columns 9 through 13 of the Appendix).

STEP 3: ALLOCATION OF RESIDUAL SCO CUSTOMERS TO MVR SUPPLIERS

The third step involves the SCO customers that remain unallocated after completion of Steps 1 and 2 because an SCO supplier or Choice supplier, that was otherwise entitled to have an allocation of MVR customers, did not successfully register as an MVR supplier. These residual customers will be combined into a sub-group for a default allocation, with 70 percent of these customers allocated to MVR registered Choice suppliers,

and 30 percent allocated to MVR registered SCO suppliers. (See columns 14 through 17 of the Appendix).

SCO Supplier Allocation -- The 30 percent portion of previously unallocated SCO customers will be allocated to MVR registered SCO suppliers based on each supplier's percentage of all SCO customers allocated to MVR registered SCO suppliers in Steps 1 and 2. This percentage is calculated by dividing the number of SCO customers allocated to each MVR registered SCO supplier, (in Steps 1 and 2), by the total number of SCO customers, minus residual customers, allocated to all MVR registered SCO suppliers. The resulting percentages are then multiplied by 30 percent, times the total number of residual SCO customers, to arrive at the number of such SCO customers to be allocated to each MVR registered SCO supplier. (See columns 13 through 16 of the Appendix).

Choice Supplier Allocation -- The 70 percent portion of previously unallocated SCO customers will be allocated to MVR registered Choice suppliers, based on each supplier's percentage of all SCO customers, allocated to MVR registered Choice suppliers in Steps 1 and 2. This percentage is calculated by dividing the number of SCO customers allocated to each MVR registered Choice supplier, (in Steps 1 and 2), by the total number of SCO customers, minus residual customers, allocated to all MVR registered

Choice suppliers. The resulting percentages are then multiplied by 70 percent times the total number of residual SCO customers to arrive at the number of such SCO customers to be allocated to each MVR registered Choice supplier. (See Columns 13 through 16 of the Appendix).

Column 17 contains the total number of customers allocated to each MVR supplier through the initial allocation (shown in column 15A of the Appendix) and the allocation of residual customers (shown in column 16 of the Appendix).

TARIFF MODIFICATION

Finally the Commission in the entry clarified that if a supplier elected to be an MVR supplier, it had agreed to take assignment of customers under Columbia's tariff requirements¹⁰. The stakeholder's agreed on assignment of SCO allocation entitlements and agreed to support the following change to Columbia's tariff assignment requirements. In preparing the tariffs to authorize the non-residential MVR allocation, Columbia shall include a provision to allow an SCO supplier, within seven business days of becoming entitled to an SCO MVR allocation, to provide notice to Columbia that it elects to designate to an wholly owned affiliated company that meets the requirements of being an MVR supplier, the SCO customers to which it would be otherwise be allocated. An SCO

-

In the Matter of the Application to Modify, in Accordance with Section 4928.08, Revised Code, the Exemption Granted Columbia Gas of Ohio, Inc., Case No. 08-1344-GA-EXM (Entry on Rehearing at 18, ¶ 38(e)) (March 20, 2013).

supplier becomes entitled to an allocation at the time at which Columbia determines the actual number of customers an SCO supplier will be initially allocated.

CONCLUSION

The Staff respectfully requests that the Commission give studied consideration to the merits of this proposal for an allocation methodology of non-residential SCO customers to MVR suppliers upon Columbia's exit of the merchant function.

Respectfully submitted,

Michael DeWine Ohio Attorney General

William L. Wright Section Chief
