## F. Certification Criteria 1: Deliverability of the Generation into Ohio

Ohio Revised Code (ORC) Sec. 4928.64(B)(3)

*The facility must have an interconnection with an electric utility.*

Check which of the following applies to the facility's location:

Yes     The facility is located in Ohio.

No     The facility is located in a state geographically contiguous to Ohio (IN, KY, MI, PA, WV).

No     The facility is located in the following state:

*(If the renewable energy resource generation facility is not located in Ohio, Indiana, Kentucky, Michigan, Pennsylvania, or West Virginia, you are required to submit a POWER FLOW study by one of the regional transmission organizations (RTO) operating in Ohio, either PJM or Midwest ISO, demonstrating that the power from the facility is physically deliverable into the state of Ohio. This study must be appended to the application as an exhibit. THE FACILITY MUST BE INTERCONNECTED TO TRANSMISSION LINES. FOR ADDITIONAL INFORMATION ON DELIVERABILITY REQUIREMENTS, PLEASE REFER TO THE COMMISSION FINDING & ORDER of 3/23/11 IN CASE NO. 09-555-EL-REN.)*

## G. Certification Criteria 2: Qualified Resource or Technology

*You should provide information for only one resource or technology on this application; please check and/or fill out only one of the sections below. If you are applying for more than one resource or technology, you will need to complete a separate application for each resource or technology.*

**G.1. For the resource or technology you identify in Sections G.4 - G.13 below, please provide a written description of the system.**

A grid interactive PhotoVoltaic generating system for a total production capacity of 10,080 watts DC. The system consists of qty36 280watt Perlight solar PV modules divided into two groups of 18 panels, each group connected to a Fronius IG+5k grid interactive inverter producing up to 22 amps at 240vac. The output from these two inverters is combined and connected through a 60amp ac disconnect/overcurrent device, and then to a private utility grade production Watt-Hour Meter, and then to the main AC buss for the homesite, then a 200amp site disconnect/overcurrent device and to the AEP utility provided NET watt-hour meter, and then the Utility grid.

**G.2. Please include a detailed description of how the output of the facility is going to be measured and verified, including the configuration of the meter(s) and the meter type(s).**

All power generated by the photovoltaic system inverters is passed through a separate utility grade watt-hour meter. The inverters also have a watt-hour display on the front of each inverter which can be used to verify the total production against the utility grade solar production watt-hour meter.

**G.3. Please submit digital photographs that depict an accurate characterization of the renewable generating facility. Please indicate the date(s) the photographs were taken. For existing facilities, these photographs must be submitted for your application to be reviewed. For proposed facilities or those under construction, photographs will be required to be filed within 30 days of the on-line date of the facility.**
