Project Update
Harmon-Star 345 kV Transmission Line Project and
Harmon-Toronto 345 kV Transmission Line Project

Dear Mr. Lambeck,

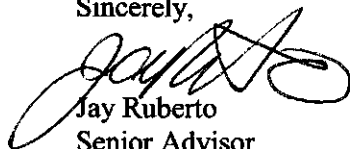

American Transmission Systems, Incorporated ("ATSI"), a FirstEnergy company, began activities related to several transmission projects in 2012 associated with new proposed substations at Harmon and Toronto and several new 345 kV transmission lines.

We have filed a Letter of Notification for the South Canton – Star 345 kV and Burger – Cloverdale #1, #2, and #3 138 kV transmission line extensions to and installation of the Harmon Substation (OPSB CASE NO.: 12-1138-EL-BLN). We also anticipate filing a similar Letter of Notification for several short 345 kV and 138 kV line extensions to and installation of the Toronto Substation in the next 2 months.

However, the 27 mile Harmon – Star 345 kV line and the 60 mile Harmon – Toronto 345 kV line are currently under review by PJM and we are awaiting the results before we move forward with any filings related to these two lines.

Please let me know if you have any questions or need additional information.

Sincerely,

Jay Ruberto
Senior Advisor
Energy Delivery Transmission & Substation Engineering
FirstEnergy Service Company
