PUCO Commissioners

Subject: No bailouts for coal

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

I have read and agree with this petition to you !!!

George M. Williams

Westlake, OHIO 44145

Sincerely,

George M. Williams.

PUCO Commissioners

Subject: No bailouts for coal

Dear PUCO Commissioners,

I am disappointed but not especially surprised that following the recent passage of Senate Bill 310 Ohio's electric utilities are approaching PUCO for non-bypassable riders . . . or a bailout for their old coal plants. Not only do companies such as First Energy not want competition from renewable energy sources and energy conservation efforts, they want more money from customers to support electric generating plants that are old, inefficient and that use coal. And to think that SB 310 was sold, in part, on the premise that it would not raise our energy bills while renewable energy sources would.

Clearly, and the legislature already knew this, old coal plants are not competitive with today's market prices for electricity and worse, they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

PUCO Commissioners

Subject: Don't make consumers pay for money-losing coal plants

Dear PUCO Commissioners,

Last spring I watched in horror as the Ohio legislature ignored all appeals to common sense and economic development, and rolled back renewable energy standards in our state.

So far Ohio is the only state in the nation to actually move ****backwards**** on switching to clean energy that creates jobs and fights climate change. Even worse, Ohio passed a law setting up draconian restrictions to drive wind energy out of the state. It was a complete disgrace.

Now First Energy, the company that led gutting of Ohio's renewable energy standards, wants customers to pay for two of its unregulated money-losing dirty coal plants. Other power companies have filed similar requests. See more information here - http://www.cleveland.com/business/index.ssf/2014/08/firstenergy_corp_looking_to_ra.html

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Please do not approve these requests.

Sincerely,
Catherine Cowan

PUCO Commissioners

Subject: No bailouts for coal

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,
Mimi Sobel

PUCO Commissioners

Subject: No bailouts for coal

Dear PUCO Commissioners,

Ohio needs to recognize the changes needed to meet environmental standards for air quality. Maintaining polluting and inefficient coal powered plants is not the best way forward. You have already degraded the environmental requirements for more environmentally friendly regulations to move Ohio ahead in clean technology. Supporting aging, polluting coal plants is an insult. I also resent with the rising utility prices that we are subsidizing these plants. This is not necessary and a further insult to the taxpayers of Ohio.

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

I would also like to add that I know for a fact that utilities had a opportunity to change their discharge emissions several years ago when costs were a lot lower. Instead of being proactive and responsible, they chose to wait--knowing in the future they could play an innocent role to the public--and putting the higher cost of a current date on the consumer. In doing so, they are trying to blame these higher cost on current administration--environmental groups and innovative advancement for alternative technologies. The point is they were aware that such costs would be implemented in the future and had not interest in implement upgraded equipment to improve emmissions when costs were lower. Some utilities had done so--but not the majority--all of this is complicated which involves how they were able to skirt around the laws, etc.

The general public does not hear about the inside story.

Sincerely,
Norma Le wis

PUCO Commissioners

Subject: Responsible coal use

Dear PUCO Commissioners,

I do support Ohio's electric utilities' (AEP) continues support of Ohio's environmental mandate. These plants are competitive with today's market prices for electricity, and they have the latest pollution controls protecting our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to supply the public with jobs while contributing to climate preservation. Due to Ohio's reliance on coal, we USE TO have some of the worst air in the nation.

Ohio's utilities' request for a two year moratorium will allow jobs to be retained while adjusting plans to continued viability. It simply isn't economically feasible and bad public policy to force expensive renewable energy costing Ohio electric customers more. The only ones who can afford renewables are the well to do. The majority of working class Ohioans cannot afford higher bills or purchase solar or wind projects. Technology get us there in the future, but the aircraft carrier cannot change course so quickly without making waves.

Sincerely,
stephen hornyak

Subject: No bailouts for coal

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,

David Zelasko

PUCO Commissioners

Subject: Shutter Old, Dirty Coal Burners

Dear PUCO Commissioners,

OK, I've deleted the pre written message and am putting in my own words:

I am really sick and tired of living in one of the most polluted cities in the US - Cincinnati - the pollution of which I'm pretty sure is at least in some part from dirty coal. As I drove down Mehring Way last night on the way to Great American Ballpark, I saw, as I do every time I drive down there, huge piles of coal next to the power plant by to the river. No doubt the poisons from which end up in the air we breath here.

I guess Duke Energy, American Electric Power and other Ohio utility companies were successful in bullying you folks into gutting Ohio's clean air efficiency standards. So, now they want us to pay to keep older, dirtier power plants open, and for us to pay for it? NO WAY! You couldn't not know that the toxins spewed from burning coal is quite literally sickening and yes, killing, our citizens. You couldn't not know that that the added healthcare costs caused by coal burning make it a financial disaster.

You couldn't not know that coal related jobs are in decline and that green jobs are increasing significantly. Please do what you know is right and do not let AEP win it's case to keep their dirty power plants open.

I'm sure I speak for the majority of Ohioans when I say

WE THE PEOPLE ARE MAD AS HELL AND WE WON'T TAKE IT ANYMORE!

I still think you are a good man, Governor. Please do what you know is right.

Sincerely,
John Britton

Subject: No bailouts for coal

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,
Kathy Falter
