PUCO Commissioners

Subject: No bailouts for coal

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,  
Kathy Groom

PUCO Commissioners

Subject: No bailouts for coal

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with *today's market prices for electricity, and they spew toxic pollution* into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,  
Francis Ray

Subject: No bailouts for coal

Dear PUCO Commissioners,

I feel Ohio should take the lead in the reduction of air pollution and make our state one in which people are proud to live. It is alarming to see the old coal plants spewing forth their black smoke into the air we breathe. Why do we cater to this dangerous practice rather than protecting our citizens and the planet in which we live?

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Dear PUCO Commissioners,

This is not only for me and not only for my family in Ohio. This is for everyone in Ohio. The electric utilities have workers who also need a clean environment.

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,  
William Cline

PUCO Commissioners

Subject: No bailouts for coal

Dear PUCO Commissioners,

The position we are being put in in regards to bailing out coal electricity generation is a fallacy. We are proposing to use Ohio taxpayers' money to bet on old, outdated and irresponsible energy plants. If PUCO wins, Ohio citizens lose - from unnecessary pollution to supporting dirty energy to environmental destruction. Our economy also loses; as other regions invest in renewable and responsible energy, our energy generation industry is left in the dust - or perhaps coal ash would be more appropriate.

Some of Duke and AEP's coal burning plants are 70 years old and still operational. While that is somewhat impressive, they no longer meet the energy standards put in place to protect our country's future. Our society has come a very long way since these factories have been built and it isn't only in terms of energy efficiency but also in terms of a collective moral obligation towards our future as well as leaps and bounds of technological advancements. For us to ignore these accomplishments only to let dirty, old, outdated factories supply the power to our state is not only foolhardy but a major blow to the advancements in energy we have made in the 20th and 21st century.

As a nation, we are at a turning point in energy. More and more cars are moving to alternate energy sources And all are becoming more efficient and safer. Unused space in farms is being used for wind electricity generation for entire communities. Our lighting energy use has decreased by 60% or more as a country in only 5 years. Geothermal and solar systems are now affordable and common enough that they are public knowledge and not out of reach for the majority of American families. Why would we destroy this momentum to support a dirty industry that has barely changed since the 1950s? Isn't it time to start thinking responsibly about where our state's electricity comes from?

The message below was generated from Sierra Club:

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,  
Gina Ronyak

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,  
Tina Gangl

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,  
Daniel Roth

PUCO Commissioners

Subject: No bailouts for coal

Dear PUCO Commissioners,

AEP is trying to increase its customers' electric bills to pay for aging coal plants that are not competitive with market. We strongly oppose the attempt by Ohio's electric utilities to bail out their old coal plants and have us pay for it. These plants cannot compete with today's market prices for electricity. They continue their legacy of toxifying our air and water with coal byproducts.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and to negatively impact public health. It is also known to contribute to climate disruption. Due to Ohio's heavy reliance on coal, we have about the worst air in the nation.

Ohio's utilities' request to bail out coal plants. These plants are no longer economically feasible. Their existence constitutes counterproductive, bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,  
Pamela & Carl Lechner
