Chairman Thomas Johnson

Dear Chairman Johnson,

American Electric Power's proposal to charge Ohioans \$117 million to extend the life of two aging coal plants would take Ohio in the wrong direction. I strongly urge you and the Public Utilities Commission to reject their proposal.

The Kyger Creek and Clifty Creek plants are well past their expiration dates and are responsible for unacceptable levels of pollution. Kyger Creek alone emitted more than 6.2 million metric tons of carbon pollution into the atmosphere in 2012 alone, according to Environmental Protection Agency figures. If these plants cannot compete on the open market, they should be shut down and replaced with cleaner cheaper options.

Instead of investing in polluting and obsolete sources of energy, I urge you and your commission to support energy efficiency and renewable energy sources that do not pollute our air and water. Energy efficiency in particular has been a boon for Ohio. Thanks to utility-run efficiency programs, Ohioans have saved more than 5 million megawatt-hours of electricity enough to power the cities of Cincinnati, Cleveland and Dayton for a year.

American Electric Power's proposal is a bad deal for Ohioans and the quality of Ohio's air and water. Please support clean energy and efficiency over obsolete and polluting power sources.

Sincerely,

James Skaley

Chairman Thomas Johnson

Dear Chairman Johnson,

American Electric Power's proposal to charge Ohioans \$117 million to extend the life of two aging coal plants would take Ohio in the wrong direction. I strongly urge you and the Public Utilities Commission to reject *their* proposal.

The Kyger Creek and Clifty Creek plants are well past their expiration dates and are responsible for unacceptable levels of pollution. Kyger Creek alone emitted more than 6.2 million metric tons of carbon pollution into the atmosphere in 2012 alone, according to Environmental Protection Agency figures. If these plants cannot compete on the open market, they should be shut down and replaced with cleaner cheaper options.

Instead of investing in polluting and obsolete sources of energy, I urge you and your commission to support energy efficiency and renewable energy sources that do not pollute our air and water. Energy efficiency in particular has been a boon for Ohio. Thanks to utility-run efficiency programs, Ohioans have saved more than 5 million megawatt-hours of electricity enough to power the cities of Cincinnati, Cleveland and Dayton for a year.

American Electric Power's proposal is a bad deal for Ohioans and the quality of Ohio's air and water. Please support clean energy and efficiency over obsolete and polluting power sources.

Sincerely,

Laura Ploenzke

Chairman Thomas Johnson

Dear Chairman Johnson,

American Electric Power's proposal to charge Ohioans \$117 million to extend the life of two aging coal plants would take Ohio in the wrong direction. I strongly urge you and the Public Utilities Commission to reject their proposal.

The Kyger Creek and Clifty Creek plants are well past their expiration dates and are responsible for unacceptable levels of pollution. Kyger Creek alone emitted more than 6.2 million metric tons of carbon pollution into the atmosphere in 2012 alone, according to Environmental Protection Agency figures. If these plants cannot compete on the open market, they should be shut down and replaced with cleaner cheaper options.

Instead of investing in polluting and obsolete sources of energy, I urge you and your commission to support energy efficiency and renewable energy sources that do not pollute our air and water. Energy efficiency in particular has been a boon for Ohio. Thanks to utility-run efficiency programs, Ohioans have saved more than 5 million megawatt-hours of electricity enough to power the cities of Cincinnati, Cleveland and Dayton for a year.

American Electric Power's proposal is a bad deal for Ohioans and the quality of Ohio's air and water. Please support clean energy and efficiency over obsolete and polluting power sources.

Sincerely,

Madeleine Breen

Chairman Thomas Johnson

Dear Chairman Johnson,

American Electric Power's proposal to charge Ohioans \$117 million to extend the life of two aging coal plants would take Ohio in the wrong direction. I strongly urge you and the Public Utilities Commission to reject their proposal.

The Kyger Creek and Clifty Creek plants are well past their expiration dates and are responsible for unacceptable levels of pollution. Kyger Creek alone emitted more than 6.2 million metric tons of carbon pollution into the atmosphere in 2012 alone, according to Environmental Protection Agency figures. If these plants cannot compete on the open market, they should be shut down and replaced with cleaner cheaper options.

Instead of investing in polluting and obsolete sources of energy, I urge you and your commission to support energy efficiency and renewable energy sources that do not pollute our air and water. Energy efficiency in particular has been a boon for Ohio. Thanks to utility-run efficiency programs, Ohioans have saved more than 5 million megawatt-hours of electricity enough to power the cities of Cincinnati, Cleveland and Dayton for a year.

American Electric Power's proposal is a bad deal for Ohioans and the quality of Ohio's air and water. Please support clean energy and efficiency over obsolete and polluting power sources.

Sincerely,

Maryann Kafer

American Electric Power's proposal to charge Ohioans \$117 million to extend the life of two aging coal plants would take Ohio in the wrong direction. I strongly urge you and the Public Utilities Commission to reject their proposal.

The Kyger Creek and Clifty Creek plants are well past their expiration dates and are responsible for unacceptable levels of pollution. Kyger Creek alone emitted more than 6.2 million metric tons of carbon pollution into the atmosphere in 2012 alone, according to Environmental Protection Agency figures. If these plants cannot compete on the open market, they should be shut down and replaced with cleaner cheaper options.

Instead of investing in polluting and obsolete sources of energy, I urge you and your commission to support energy efficiency and renewable energy sources that do not pollute our air and water. Energy efficiency in particular has been a boon for Ohio. Thanks to utility-run efficiency programs, Ohioans have saved more than 5 million megawatt-hours of electricity enough to power the cities of Cincinnati, Cleveland and Dayton for a year.

American Electric Power's proposal is a bad deal for Ohioans and the quality of Ohio's air and water. Please support clean energy and efficiency over obsolete and polluting power sources.

Sincerely,

Carol Rainey

DESCRIPTION OF ISSUE/CONCERN:

Customer email:

Urge the Public Utilities Commission of Ohio to deny AEPs request to increase customer's bills to pay for coal plants. AEP is trying to increase its customers electric bills to pay for aging coal plants. Coal, which generates nearly 70 percent of electricity in Ohio, is a dangerous fuel known to cause major air pollution and negatively impact public health while contributing to climate disruption. AEP wants to charge customers an estimated \$117 million to keep two dirty, expensive coal plants in operation. These coal plants (Kyger Creek in Cheshire, Ohio, and Clifty Creek in Madison, Indiana) were built in the early 1950s. They are not competitive with today's market prices for electricity. They spew toxic pollution into our air and water. This will prevent our state from reducing its dangerous emissions of carbon, soot, smog and mercury pollution.
