COMMENT DESCRIPTION:

PLEASE FILE OPPOSITION COMMENT UNDER CASE #: 14-1297-EL-SSO.

Since the Clean Air Act of 1970, power companies have continued to shirk the law and pursued every means possible of using old outdated technology. Investment in renewable energy and energy efficiency has been largely ignored except when ordered by the state. I am among the majority of Ohio electricity customers say they think Ohio should be investing more in renewable energy like solar and wind. And join the overwhelming majority (92 percent) of Ohioans who say it is important for Ohio to invest in measures to increase energy efficiency.

FirstEnergy's coal plants are not competitive with today's market prices for electricity. Every day, Solar is breaking new ground in energy production.

And it would be shameful for the PUCO to condemn Ohio Consumers to pay even more than they already have for the damage these old plants have done to our water, air, and wallets. Ohio is the home of invention, and you should not stop the advances in power generation by making old, poisonous processes forever profitable. Just as wooden ships had their day, old coal plants have too, and it is wrong to legislate their use into the future.

Please docket the attached in the case number above.
