PUCO Commissioners

Subject: No bailouts for coal

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,  
Robert Studzinski

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,  
James Martinelli

Your administration has repeatedly promoted incorrect and biased opinions in regards to energy. It is tiresome. And on a personal note, the last time your assistant replied to me they told me that I was misinformed and then spelled my name wrong. It was not convincing. Thank you for your time.

Sincerely,  
Emily Maiden

PUCO Commissioners

Subject: Responsible coal use

Dear PUCO Commissioners,

I do support Ohio's electric utilities' (AEP) continues support of Ohio's environmental mandate. These plants are competitive with today's market prices for electricity, and they have the latest pollution controls protecting our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to supply the public with jobs while contributing to climate preservation. Due to Ohio's reliance on coal, we USE TO have some of the worst air in the nation.

Ohio's utilities' request for a two year moratorium will allow jobs to be retained while adjusting plans to continued viability. It simply isn't economically feasible and bad public policy to force expensive renewable energy costing Ohio electric customers more. The only ones who can afford renewables are the well to do. The majority of working class Ohioans cannot afford higher bills or purchase solar or wind projects. Technology get us there in the future, but the aircraft carrier cannot change course so quickly without making waves.

Sincerely,  
stephen hornyak

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

I would also like to add that I know for a fact that utilities had a opportunity to change their discharge emissions several years ago when costs were a lot lower. Instead of being proactive and responsible, they chose to wait--knowing in the future they could play an innocent role to the public--and putting the higher cost of a current date on the consumer. In doing so, they are trying to blame these higher cost on current administration--environmental groups and innovative advancement for alternative technologies. The point is they were aware that such costs would be implemented in the future and had not interest in implement upgraded equipment to improve emissions when costs were lower. Some utilities had done so--but not the majority--all of this is complicated which involves how they were able to skirt around the laws, etc.

The general public does not hear about the inside story.

Sincerely,  
Norma Lewis

PUCO Commissioners

Subject: No bailouts for coal

Dear PUCO Commissioners,

Ohio needs to recognize the changes needed to meet environmental standards for air quality. Maintaining polluting and inefficient coal powered plants is not the best way forward. You have already degraded the environmental requirements for more environmentally friendly regulations to move Ohio ahead in clean technology. Supporting aging, polluting coal plants is an insult. I also resent with the rising utility prices that we are subsidizing these plants. This is not necessary and a further insult to the taxpayers of Ohio.

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.
