## F. Certification Criteria 1: Deliverability of the Generation into Ohio

Ohio Revised Code (ORC) Sec. 4928.64(B)(3)

*The facility must have an interconnection with an electric utility.*

Check which of the following applies to the facility's location:

**Yes**     The facility is located in Ohio.

**No**     The facility is located in a state geographically contiguous to Ohio (IN, KY, MI, PA, WV).

**No**     The facility is located in the following state:

*(If the renewable energy resource generation facility is not located in Ohio, Indiana, Kentucky, Michigan, Pennsylvania, or West Virginia, you are required to submit a POWER FLOW study by one of the regional transmission organizations (RTO) operating in Ohio, either PJM or Midwest ISO, demonstrating that the power from the facility is physically deliverable into the state of Ohio. This study must be appended to the application as an exhibit. THE FACILITY MUST BE INTERCONNECTED TO TRANSMISSION LINES. FOR ADDITIONAL INFORMATION ON DELIVERABILITY REQUIREMENTS, PLEASE REFER TO THE COMMISSION FINDING & ORDER of 3/23/11 IN CASE NO. 09-555-EL-REN.)*

---

## G. Certification Criteria 2: Qualified Resource or Technology

*You should provide information for only one resource or technology on this application; please check and/or fill out only one of the sections below. If you are applying for more than one resource or technology, you will need to complete a separate application for each resource or technology.*

**G.1. For the resource or technology you identify in Sections G.4 - G.13 below, please provide a written description of the system.**

The electrical generating facility is a 10 KW 37 panel roof mounted system. The panels are Hyundai HiS-265MG 265w Mono Black Frame solar collectors. Each panel is connected to the system through an ABB Micro Inverter model Micor-0.25-I-OUTD-US-208/240. The micro inverters are monitored and controlled through an Aurora CDD (Concentrator Data Device) via a Wi-Fi connection. Each CDD can monitor up to 30 micro inverters or 30 panels.

The 37 roof mounted panels and inverter connections are separated into three (3) separate circuits. Each circuit is connected to one of three 20 amp, 240 volt circuit breaker mounted in a separate breaker box. The output from the breaker box is connected through a separate disconnect switch to a 50 amp, 240 volt circuit breaker in the facilities main service panel. That service panel is connected to the grid via a net metering meter provided by Duke Energy.

**G.2. Please include a detailed description of how the output of the facility is going to be measured and verified, including the configuration of the meter(s) and the meter type(s).**

The power output of each collector panel and micro inverter is monitored via a Wi-Fi connection by a Concentrator Data Device. This device monitors each Micro Inverter for voltage out, voltage in, and power output. It also tracks total energy produced per inverter since system start up. This data is also tracked by ABB the manufacturer of the inverter and control system.

The total output of the system is monitored by Duke Energy via a net metering power meter model C1S made by Itran. This device measures the net energy provided to the grid or consumed from the grid by the facility. The attribute tracking system will be GATS operated by PJM -EIS.

**G.3. Please submit digital photographs that depict an accurate characterization of the renewable generating facility. Please indicate the date(s) the photographs were taken. For existing facilities, these photographs must be submitted for your application to be reviewed. For proposed facilities or those under construction, photographs will be required to be filed within 30 days of the on-line date of the facility.**

**The Applicant is applying for certification in Ohio for a facility using one of the following qualified resources or technologies (Sec. 4928.01 ORC):**

**G.4 SOLAR PHOTOVOLTAIC**

**G.4a Location of the PV Array:** Roof

Description:

**G.4b Total number of Modules:** 37

**G.4.1 PV Modules**

For each PV module, provide the following information:

**G.4.1.a Manufacturer:** Hyundai

**G.4.1.b Model and Rating:** HiS-265MG 265w Mono Black Frame

## H. Certification Criteria 3: Placed-in-Service Date (Sec. 4928.64. (A)(1) O.R.C.)

Yes has a placed-in-service date on or after January 1, 1998; Date: 10/17/14

No has been modified or retrofitted on or after January 1, 1998; Date:

Please provide a detailed description of the modifications or retrofits made to the facility that rendered it eligible for consideration as a qualified renewable energy resource. In your description, please include the date of initial operation and the date of modification or retrofit to use a qualified renewable resource. Please include this description as an exhibit attached to your application filing and identify the subject matter in the heading of the exhibit.

No Not yet online; projected in-service date:

**H.1** Is the renewable energy facility owner a mercantile customer? No

ORC Sec. 4928.01 (19) "Mercantile customer" means a commercial or industrial customer if the electricity consumed is for nonresidential use and the customer consumes more than seven hundred thousand kilowatt hours per year or is part of a national account involving multiple facilities in one or more states.

Has the mercantile customer facility owner committed to integrate the resource under the provisions of Rule 4901:1-39-08 O.A.C? No

If yes, please insert/submit a copy of your approved application as an exhibit to this filing.
