PUCO Commissioners

Subject: No bailouts for coal

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,
Susan Handa

Nov 7, 2014

PUCO Commissioners

Subject: No bailouts for coal

Dear PUCO Commissioners,

I refuse to buy my electricity from Ohio's coal-fired electrical generators. I purchase all my electricity from an out-of-state wind farm which charge me less money per kilowatt-hour than I would be paying right now from AEP's coal-burning power plants. I have voted with my dollars and left the coal-fired power plant grid.

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. Why should I have to pay for a service that I do not use? These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution. Furthermore, I refuse to pay for something that I am not using. This e-mail serves as notification to the PUCO that I will not honor such a charge being tacked on to my electric bill. You cannot mandate that people pay for a service that they do not want and do not use. If you do authorize this surcharge, make absolutely certain that the companies ONLY apply the charge to someone who buys power from their coal-fired plants.

Sincerely,
Julie Weatherington-Rice, PhD CPG, CPSS

Subject: No bailouts for coal

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

My job depends on my employer having a fair rate on the power they use, strapping them with the costs of old, out dated equipment is simply wrong, and Ohio deserves better.

Sincerely,
Sherri Collins

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,
Linda Landis

PUCO Commissioners

Subject: No bailouts for coal

Dear PUCO Commissioners,

Because we all know our dependency on coal MUST be phased out sooner rather than later, I do not support Ohio's electric utilities' attempt to simply bail out their old coal plants at public expense.

These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water. The growing toxic acidity in our lakes, including Lake Erie, is just one example.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Coal is not a sustainable energy source for the future. Let market forces run their course so that society can move onto better energy sources, instead of interfering in the market to artificially extend the life of such a destructive resource. The sooner we transition to renewable energy, the easier the transition for workers to move from coal-related jobs to more sustainable employment.

PUCO Commissioners

Subject: No bailouts for coal

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,
Kortney Jackson

Subject: No bailouts for coal

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,
Terri Dawson

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

If Ohio was a stand alone nation, it would rank 15th in the world in CO2 and green house gas creation, mostly because of the 20+ coal fired plants in our state. (Go ahead, do the math. I have.) We're all sick because of it.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Ohio has turned it's back on solar and wind power, placating the coal power industry again. It's time to tighten the screws on the polluters.
