PUCO Commissioners

Subject: No bailouts for coal

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,
Murray Stein

PUCO Commissioners

Subject: No bailouts for coal

Dear PUCO Commissioners,

You want to bailout Ohio's old coal plants on my dime? Perhaps you do not read the IPCC reports. The science community is advising the world that we either go to sustainable sources of energy now or doom our planet. The era of fossil fuels is over. Coal is over.

Perhaps you do not grasp the significance of destroying Ohio's drinking water and air by releasing fracking pollutants and coal mining pollutants. Perhaps you do not understand what the present system of factory farming, run by the international chemical cartels and fossil fuel industrialists, is doing that destroys our soils now and for generations to come. Ohio's heavy reliance on coal creates some of the worst air in the nation.

This obsolete system of agriculture, based as it is in massive burning of fossil fuels, is killing our pollinators, sickening and killing our citizens, maiming our planet. Fossil fuel is a finite energy source. We need to look forward, not backwards. We need to be leaders, not flunkies for an out of time industry.

The creativity and resilience of Ohio citizens could lead the nation to sustainable energy sources. We have the science, the universities, we have the innovators, and we have the enthusiastic young and better educated generations who can see so much potential in better energy sources and in sustainable resourcing of water, soil, agriculture.

It is our job to open the gates for our children, so they can build an economically functional future in Ohio, and in our Nation. Coal, and the other fossil fuels of the past industrial ages have no relevancy to any workable future.

Sincerely,
Maris Keller

Subject: No bailouts for coal

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,
Genevieve Mary Szuba

PUCO Commissioners

Subject: No bailouts for coal

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

WE NEED TO SAVE THE PLANET FOR OUR CHILDREN AND GRANDCHILDREN!!!!

Sincerely,
Victoria Belfiglio

Subject: No bailouts for coal

Dear PUCO Commissioners,

I do not support Ohio's electric utilities' attempt to bail out their old coal plants on my dime. These plants are not competitive with today's market prices for electricity, and they spew toxic pollution into our air and water.

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out coal plants that are no longer economically feasible is bad public policy that, in addition to costing Ohio electric customers more, will prevent Ohio from reducing dangerous emissions of carbon, soot, smog and mercury pollution.

Sincerely,
Jessica Mills
