I do not support Ohio's electric utilities' attempt to bail out the aging, dangerous Davis-Besse nuclear reactor, nor dirty coal plants, at ratepayers' expense. These plants are not competitive with today's market prices for electricity, and they spew radioactive and toxic pollution into our air and water. We should not have to pay more for dirty energy.

It's time to pull the plug on Davis-Besse; for decades it has experienced safety problem after safety problem--how much longer can it buck the odds before it causes a catastrophic accident?

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out these obsolete plants that are no longer economically viable is bad public policy. Ohio should be focused on policies that will encourage safer, cleaner and affordable clean energy technologies, not expensive and dirty nuclear and coal.

I question the Ohio's electric utilities' attempt to bail out the aging Davis-Besse nuclear reactor, nor coal plants, at ratepayers' expense. If these plants are not competitive with today's market prices for electricity, the public should not have to bear the burden of paying for their update or demolition.

Davis-Besse has experienced safety problem after safety problem--how much longer can it buck the odds before it causes a catastrophic accident?

Coal, which generates nearly 70 percent of electricity in Ohio.

Ohio's utilities' request to bail out these obsolete plants that are no longer economically viable is poor public policy. Ohio should be focused on policies that will encourage safe, clean and affordable energy technologies, or a blend of methodologies.

Subject: FIRST ENERGY RATE INCREASE

PLEASE FILE MY COMMENTS INTO THE DOCKET FOR CASE #14-1297-EL-SSO As a all-electric home owner we are once again being forced by First Energy to pay for their mis-management,we have no place to turn for relief . we are locked in to their continuous RATE INCREASES. My wife & I are both retired on social security,a fixed income & can't afford to keep paying for First Energy's decisions to always restructure their prices FOR THEIR BENEFIT. PLEASE HELP PROTECT the seniors citizens not to be OVERCHARGED for a necessity of their health & well-being ,especially all of us with ALL-ELECTRIC homes. THANK YOU Chester & Corrine Skoczen of Strongsville,ohio

Built into these "bailout" costs is the loss of future revenue that the utilities expected to receive from continuing to operate these plants. Ohioans should not be on the hook for any of this; we've paid twice already: for the power and for our degraded environment. Don't make us pay a third time.

This is nothing more than forward funding, or more accurately, it is forward profit funding. FirstEnergy is doing nothing more than borrowing \$3 billion dollars from Ohioans, from future years to pay for their outdated and dirty energy plants. This is the equivalent of J. Wellington Wimpy the soft-spoken and intelligent scam artist saying "I will gladly pay you Tuesday for a hamburger today".

The game now is how to evade the PUCO and Ohio's Alternative Energy bill for the next 15 years. FirstEnergy has dug deep into a bag of tricks pulling out the craziest payment gimmick ever put together. Ohio electric energy suppliers are doing a ritual dance around a pot full of money - our money. And when the dance is done, the pot will be empty.

This is a theoretical payment program with theoretical money - but our money is not theoretical we need it to survive. The program is an attack on the senior citizens of Ohio, asking seniors to pay more today so that they can pay less later ... will those seniors be here to see it?!

I do not support Ohio's electric utilities' attempt to bail out the aging, dangerous Davis-Besse nuclear reactor, nor dirty coal plants, at ratepayers' expense. These plants are not competitive with today's market prices for electricity, and they spew radioactive and toxic pollution into our air and water. We should not have to pay more for dirty energy.

It's time to pull the plug on Davis-Besse; for decades it has experienced safety problem after safety problem--how much longer can it buck the odds before it causes a catastrophic accident?

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out these obsolete plants that are no longer economically viable is bad public policy. Ohio should be focused on policies that will encourage safer, cleaner and affordable clean energy technologies, not expensive and dirty nuclear and coal.

I do not support Ohio's electric utilities' attempt to bail out the aging, dangerous Davis-Besse nuclear reactor, nor dirty coal plants, at ratepayers' expense. These plants are not competitive with today's market prices for electricity, and they spew radioactive and toxic pollution into our air and water. We should not have to pay more for dirty energy just to line the pockets of the greedy corporation(s) which own these albatrosses.

It's time to pull the plug on Davis-Besse; for decades it has experienced safety problem after safety problem--how much longer can it buck the odds before it causes a catastrophic accident? Nuclear energy has never been safe, nor will it ever be. We have much safer and better technology now which utilizes the sun and the wind - no pollution!

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation. I'd like for my children and grandchildren to have a better chance at life than greedy energy companies and the politicians they've purchased are planning.

Ohio's utilities' request to bail out these obsolete plants that are no longer economically viable is exceptionally bad public policy. The folks in Illinois seem to understand this, so why can't we in Ohio move into the next century instead of being stuck in the past with a bunch of Luddites? Ohio should be focused on policies that will encourage safer, cleaner and more affordable clean energy technologies, not expensive, toxic, obsolete nuclear and coal.

Please do not saddle Ohioans with supporting dying industries.

Subject: opposed to FirstEnergy's proposed Purchased Power Agreement to bailout their failing power plants

Please file my comments into the docket for Case # 14-1297-EL-SSO.

I am opposed to the First Energy plan asking its customers to subsidize two unregulated and unprofitable power plants.

As an all-electric home owner we have already been denied the discounts promised by FEC.

When Sue Daugherty, the executive director of Serving Our Seniors, asked FEC, "Why doesn't First Energy use its profits instead of adding a new fee to the consumers' bills?" they had no answer.

When will PUCO stand up for the people and not corporations?

Regards,

These plants are not competitive with today's market prices for electricity, and they spew radioactive and toxic pollution into our air and water. We should not have to pay more for dirty energy.

It's time to pull the plug on Davis-Besse; for decades it has experienced safety problem after safety problem--how much longer can it buck the odds before it causes a catastrophic accident?

Coal, which generates nearly 70 percent of electricity in Ohio, is known to cause major air pollution and negatively impact public health while contributing to climate disruption. Due to Ohio's heavy reliance on coal, we have some of the worst air in the nation.

Ohio's utilities' request to bail out these obsolete plants that are no longer economically viable is bad public policy. Ohio should be focused on policies that will encourage safer, cleaner and affordable clean energy technologies, not expensive and dirty nuclear and coal.

I do not support Ohio's electric utilities' attempt to bail out the aging, dangerous Davis-Besse nuclear reactor, nor dirty coal plants, at ratepayers' expense. These plants are not competitive with today's market prices for electricity, and they spew radioactive and toxic pollution into our air and water. We should not have to pay more for dirty energy.
