Brookside-Howard 138 kV Transmission Line Reconductoring Project
Supplemental Information
Case No. 14-0930-EL-BNR

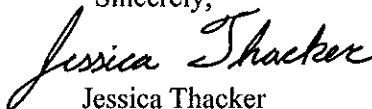

Dear Mr. O'Dell:

This letter provides supplemental information to the Board concerning the construction access of the Brookside-Howard 138 kV Transmission Line Reconductoring Project ("Project"), Case No. 14-0930-EL-BNR. The original construction access to structures 1671 and 1670 for this Project has been altered.

A change to the construction access for structure #1671 is being proposed per the land owner's request. The original construction access to structure #1671 was east through the existing right-of-way from Structure # 1672. The access path between these two structures has now been removed. The new access to structure #1671 is from Five Points East Road, north and then northwest through the landowner's property, then west through the existing right-of-way. This new access route also allows access to Structure #1670. The new access to structure #1670 is from Five Points East Road, north and then northwest through the landowner's property, then east through the existing right-of-way. The new access route is depicted on pages 12-14, and 14a of the attached documents.

These changes are believed to be in compliance with the previously approved certificate. Should the Ohio Power Siting Board desire further information or discussion of this submittal, please contact me at (330) 384-5955.

Sincerely,

Jessica Thacker
Supervisor, Transmission Siting
Energy Delivery Transmission and Substation Design
FirstEnergy Service Company
