OPPOSITION COMMENT UNDER CASE # 14-1297-EL-SSO.

It's become quit clear that nuclear power is not a viable alternative sour of power generation even a child can understand the insanity of it. When You can't even get banks to put up the money you know it's bad and that's just the beginning of long list of problems. No state wants to store the waste, the endless cost increases etc. But we all know the big problem here, just one accident, ONE and you have an unmanageable problem. Sure the media will go along with the cover up of the ongoing danger claiming "It's not that bad and it's under control" if ever there was a more disgusting lie I have yet to hear it. The Japanese know it those who had to vacate the Russian Chernobyl area know it, but they have been relegated to that I famous void of the Silenced Majority shut out of the Corporate controlled media. So please quit being so amazingly greedy and desperate to keep this industry of death alive and think of someone other than yourselves and those invested in this death industry. Shut Not just this ancient catastrophe waiting to happen and invest in the endless safe power of solar or at least an equal alternative. It's had to grasp the void of humanity it takes to fight, lie and scam so many innocent men women and children all to keep this nightmare alive? I think all of you at First Energy should be forced to undergo a psychological assessment because it would seem you have a form of mental illness on par with a psychopathic murderer.

Sincerely,
Paul.

To Whom It May Concern,

Please shut down the Davis_Besse nuclear plant. This plant and operator have a history of defects and mismanagement. Aging nukes are not cost effective in todays energy market, and should not be artificially sustained any longer. The down side potential from a serious accident has been show by Fukushima to be a real possibility, despite the nuclear industry's propaganda. Help protect the citizens of Ohio, and shut down this costly defective plant.

Cheers.

To the Public Utilities Commission of Ohio:

In the matter of CASE # 14-1297-EL-SSO, this is an OPPOSITION COMMENT.

It is critical that you exercise appropriate authority and CLOSE the Davis Besse Nuclear Power Plant. We can not and dare not allow ourselves to suffer a similar disaster as that which occurred and continues to threaten both Fukushima and the rest of the world.!

The American public should not be saddled with the costs of aging power plant facilities simply because the plant owner and/or the equipment manufacturer sold a community a "bill of goods" under the guise of lasting forever.

The nuclear industry continues to act like there are no problems associated with water cooled fission reactors. This is a bold faced lie which will haunt us and our children for far too many years in the future if you do not take appropriate action to CLOSE the Davis Besse Nuclear Power Plant.

I was involved in equipment design for the initial entry to the Three Mile Island containment following that disaster. Such situations will continue to occur as devices and facilities age...even without the aid of natural disasters. Why risk your families and friends and loved ones lives by allowing ill maintained and ill managed assets to continue to threaten our lives.

Thanks for the opportunity to be heard,

John Arnold

Public Utilities Commission of Ohio:

It would be TOTALLY IRRESPONSIBLE to allow this accident-waiting-to-happen to continue operation. Its existence threatens the entire Great Lakes region, as well as a large portion of the Northeast. I urge you to show a modicum of sanity by shutting the Davis-Besse plant down IMMEDIATELY! Your commission is tasked with protecting the common welfare of the people of Ohio. Please take the threat this inferior plant poses to the common good seriously!

Subject: Shut Davis-Besse - by going solar.

As a doctor I have finally realized that the risk from nuclear is far too great.

If we have a disaster at a coal mine or oil rid, it can harms dozens of coal miners, burning coal or oil harms millions over years.

However, one accident at an atomic energy plant can damage unborn children for generations.

Tens of thousands can be killed.

We must close all nukes now. And the best way to do that is for each city to require each local Utility to pay solar home owners \$0.49 kwh, or even \$0.99 kwh for selling solar onto the grid.

Germany has a solar payment policy that pays \$0.99 kwh, and because of that it now has shut down 30+ reactors and will shut them all by 2022. Plus it has banned FRACKING using solar.

How dare you threaten the lives of 50 million people in America! Shut down the Davis-Besse Nuke Plant NOW before it becomes our very own Chernobyl (which is still melting down and killing all life near it). How can you put profits above the probability that your poisonous plant needs to be mothballed and decommissioned and millions spent for the rest of eternity keeping the spent fuel rods safe (i.e., dry-casked). I have children and I want them to have the chance to live their lives. Radioactivity released from Davis-Besse threatens every living being on the planet. Do the right thing and SHUT IT DOWN!!

As the world's nuke reactors begin to crumble and fall, the danger of a major disaster is escalating at the decrepit Davis-Besse plant near Toledo, Ohio.

Now the plant's owners are asking the Ohio Public Utilities Commission to force the public to pay billions of dollars over the next 15 years to subsidize reactor operations.

Hear about Davis-Besse's astonishing story, by listening to this incredible hour-long interview with local attorney Terry Lodge and Kevin Kamps of Beyond Nuclear, along with Tim Judson of the Nuclear Information and Resource Service.

To read the full EcoWatch story and link to this amazing radio show, go to:

<http://ecowatch.com/2015/02/14/ohioans-pay-bill-keep-davis-besse-alive/>

If you want Davis-Besse shut, write the Public Utilities Commission of Ohio at docketing@puc.state.oh.us. Use this label in the subject line of the email, as well as the body of the email message, so PUCO can route the public comments to the correct proceeding: OPPOSITION COMMENT UNDER CASE # 14-1297-EL-SSO.

Subject: OPPOSITION COMMENT UNDER CASE # 14-1297-EL-SSO

February 15, 2015.

Dear Public Utilities Commission of Ohio;

I am writing to you express my concern over the Davis-Besse Nuclear Power Station, and ask you to shut it down. Since it's operation in 1977, it has had over 10 serious incidents that the Nuclear Regulatory Commission have investigated and fined the operators for. These accidents have put the public and environment at risk, as well as highlighted the inept operation and internal management of this plant.

It makes no fiscal sense for tax payers in the state of Ohio to invest billions of dollars to sustain a dangerous, inefficient, and mismanaged facility. A leak or accident from Davis-Besse would contaminate the Great Lakes water system, poisoning most of the midwestern states, as well as Ontario, Canada, a province which contains over 38% of the country's entire population.

I am asking the Public Utilities Commission to stand firm against FirstEnergy; do not subsidize this company, and shut down Davis-Besse before it harms us and our homes.

Sincerely,

August Bramhoff.

To Whom it May Concern at PUCO,

What happens in Ohio matters to people everywhere. The effects of Chernobyl continue to this day and transcend national boundaries.

Davis-Besse should be shut down and the owners should bear the costs and not the ratepayers who have already paid for many years for this reactor to pollute their neighborhoods.

The state of disrepair is a danger to humanity. Do not renew this license.

Respectfully,
Joy Al-Sofi

Evidently we have a disaster waiting to happen and the people in charge are proposing slapping on some more Band-Aids and having the tax payers foot the bill. It is high time we admit the Nuclear Power is not what it was touted to be. How could we have ever embraced a power source with waste so toxic that our storage capabilities can only contain it for decades, yet the danger lasts for centuries and beyond. We've already seen what happened in Japan, we do not need a repeat here. Shut this looming disaster down.

Sirs,

Re:OPPOSITION COMMENT UNDER CASE # 14-1297-EL-SSO.

I'm appalled at reading that the Davis-Besse reactor is in such a state that it has come within inches of failing. What does it take for this reactor to be shut down permanently, a complete disaster? I live in NE Ohio, I'm not happy with this news, I hope you can understand this.

The article I read states:

They allowed boric acid to eat within 3/16th of an inch of a Chernobyl-scale disaster that would've permanently irradiated the Great Lakes region. They have set the record for fines by the Nuclear Regulatory Commission, and continue to drain billions of ratepayer dollars from Ohio's bleeding economy.

Are you going to do something about this?

Yours,

Sharon Miranda

The Davis-Besse nuclear reactor exemplifies the folly that breeder reactor electrical power generation always was -- and now its chickens are coming home to roost. I DO NOT CARE how much investment its owners have at stake. I DO NOT CARE how much investment its ratepayers have in it, other than to care that they have been ripped off and there is no "fix"ing that. YOU SHOULD NOT CARE EITHER.

What you should care about is not throwing more money into a Black Hole, not additionally screwing the ratepayers for the folly, and not ignoring a VERY dangerous situation resultant of deteriorating facilities and the fact that nuclear power generation was instituted with only prayers that sometime in the future, some way to render its "waste" radioactivity harmless would magically be discovered. And hasn't been.

Instead, seize all the owners' assets to establish a fund for decommissioning the plant and dealing with the enormous nuclear safety issues, and require the owners and their heirs into eternity to responsibly manage the situation or live in prison.

Dear Sir or Madame,

It has come to my attention that there is soon to be a hearing regarding the Davis-Besse plant and who is to be responsible for paying for its maintenance during continued use. Though I am not a resident of Ohio and, therefore, would not be footing this particular bill, I am a concerned citizen (and neighbor in Wisconsin) who would like to contribute an opinion RE: OPPOSITION COMMENT UNDER CASE # 14-1297-EL-SSO. With the increasing severity of climate disasters of all sorts (storm, quake, etc.), it only seems logical to discontinue the life of this plant altogether--thereby eliminating the necessity for subsidies to keep it functional, much less safe. We are reaching a point in our technological evolution where we have the choice to move toward safer, renewable energy sources that would not only provide this nation with greater independence but also greater security with regard to both environmental disaster and international threat.

I thank you for your time and for considering my feedback.

Best Regards,

Aleks Kosowicz

Opposition Comment Under Case #14-1297-EL-SSO

DEAR PUC:

I write to oppose the continued operation of the Davis-Besse nuclear reactor, the "reactor with a football-sized hole in its head" and oppose indenturing ratepayers to fund capital improvements or operating expenses for this decrepit and poorly managed reactor. The near-disaster caused by inept management and poor regulatory oversight of Davis-Besse was just 3/16 inches away from contaminating the entire Great Lakes region forever in a disaster that would have rivaled Chernobyl had the reactor vessel head completely failed. It was only luck that the deterioration was caught in time. I've been told by a former employee that the NRC has a bronze football in its lobby, a monument to the near-miss at Davis-Besse, lest they ever forget how close we were to disaster, or fail to absorb the "lessons learned." According to the NRC, Davis-Besse has been the source of two of the top five most dangerous nuclear incidents in the United States since 1979.

Private industry and Wall Street have determined that the cost of keeping the old reactors limping along is too high and that many are operating at a loss. Economic pressures are closing them. This is appropriate for a technology whose time is past. Please do not keep Ohio in the dark ages, chaining your citizens to a dying, greedy industry and subsidizing a losing, antiquated technology, but allow them to invest in renewable, sustainable energy for the 21st Century. Your children and grandchildren will thank you for it.

People across the country and around the world prefer renewable sources of energy over fossil fuels and nuclear. Climate change and the disasters at Chernobyl and Fukushima have shown that as a society we have neither the time nor the money to waste resources on archaic, expensive, dangerous nuclear. It is NOT a solution to climate change. The ozone-destructive greenhouse gases emitted in uranium enrichment, the CFCs that were banned for all other industrial purposes in the 70's, are 100 times more potent than CO2 in the atmosphere. The cost overruns and timelines for construction of new reactors are prohibitive. The apparently insurmountable problem of what to do with the highly radioactive waste is no closer to being solved than it was 50 years ago, yet we blindly continue to create more of it. Stand for the future, and say no to public welfare for the private nuclear industry.

OPPOSITION COMMENT UNDER CASE # 14-1297-EL-SSO.

The public should not be forced to pay billions of dollars over the next 15 years to subsidize reactor operations at the crumbling, decrepit Davis-Besse plant near Toledo Ohio. Shut Davis-Besse. We don't need another Fukushima-style disaster.

Ms. Millicent Sims

Shut-down the Davis-Besse Nuclear Power Plant near Toledo.

Davis-Besse's history of near-miss disasters defies belief. Its shoddy construction, continual operator error and relentless owner incompetence would not be believed as fiction, let alone as the stark realities of a large commercial reactor operating in a heavily populated area.

Time and again Davis-Besse has come within a fraction of an inch and an hour of crisis management time. Today its critical shield wall is literally crumbling, with new cracks opening up every time the northern Ohio weather freezes.

The company's owners have blacked out the entire Northeast including 50 million customers—the largest such disaster in world history.

They allowed boric acid to eat within 3/16th of an inch of a Chernobyl-scale disaster that would've permanently irradiated the Great Lakes region. They have set the record for fines by the Nuclear Regulatory Commission, and continue to drain billions of ratepayer dollars from Ohio's bleeding economy.

Now they want those ratepayers to fork over billions more to keep this reactor running beyond the brink.

This is a bad deal all around and deserves to be shutdown now.

Hello,

I am writing to express my opposition to the request by the Davis-Besse plant owners to ask the public to pay billions of dollars over the next 15 years to subsidize reactor operations. The world needs to move away from nuclear energy, as shown by the Fukushima disaster. This plant has outlived its life span, is basically just a nuclear accident waiting to happen, and should be decommissioned rather than subsidized by the public.

I respectfully ask that you reject this request and, if possible, shut down the plant.

Thank you for your consideration of my comments, and please do the right thing by your constituents rather than big money.

Best regards,

Michelle Carter
San Francisco, CA

Sirs,

Is it appropriate for you to think of the future of your grandchildren, should you have any, when evaluating the safety and financial threat that the radioactive machine known as Davis -Bessie presents to the community, State and the USA? Absolutely yes, as well as all others whose futures would be negatively affected by a major radioactive release.

You are not robots programed to think only about industry profits even if that is what your professional training intended.

There have been so many close calls at Davis -Bessie that the operator should loose it's license. If it was an auto that they operated their license would have been suspended long ago yet a machine that has already come close to killing and harming hundreds of thousands of people continues to operate.

I urge yo to order the shut down and decommissioning of that reactor.

Sincerely,

Dale LEhman

Davis-Besse is perhaps the worst nuclear plant in North America

It needs to be shutdown, not subsidized for being dangerous and not cost effective anymore. There are so many more better options!

I am a Certified Energy Manager, as well as having a MSME level knowledge of material science and radiation processes. I used to be proud to call Dublin OH my hometown, but not if this overage plants gets subsidized on the backs of hard working people who deserve to live without the risk.

Dear Representative of the Ohio Public Utilities Commission,

I, Jonathan McGreal, a voting age resident of Northern Ohio, request that you move to close the Davis-Besse nuclear reactor plant in Toledo Ohio. My concerns over the continuing existence of this plant are twofold. One, maintaining it has bled the taxpayer (of which I am one) of funds that can be useful in building an economically and environmentally sustainable future for Ohioans. The recent demand of the plants owners for continued subsidy of this facility is an affront to the average hardworking people of this state. Second, this facility is an ongoing affront to public safety. The plant's security infrastructure is so shamefully decrepit that it is now a constant risk to the local population. I do not want Toledo to undergo the same fate as Chernobyl and Fukushima, with all the misery that accompanies it.

Folks,

You Must Be Kidding.

A deteriorating radioactive structure near or on major river/watersheds that flow all the way to the Gulf! And you may have believed that Deepwater Horizon was a challenging disaster.

How about every living thing & space glowing.

Follow the money... who gained, who is responsible. It is their obligation to eliminate their waste/contamination. Another too-big-to-fail situation, in this case too-dangerous-to-fail, of course the players want the feds to pick up after them, an industry of spoilt brats who can't accept responsibility for their actions!

OPPOSITION COMMENT UNDER CASE # 14-1297-EL-SSO

Hello,

My name is Keith Frank. I live in Parma, OH and personally I would feel much safer if the Davis-Besse Nuclear Plant was shut down for. We could switch to green energy. Solor Panels, wind turbines, water turbines. I am just worried that it might fall apart like the one in Japan and I really don't want to become radio-active man. Also I don't want to pay more in taxes to have it repaired. Thanks for reading.

I am a resident of lake bluff illinois. I live two miles from the shore of Lake Michigan. I live near Zion Illinois, near a Nuclear plant that thankfully was decommissioned years ago. We live in a world where what happens in one place has effects in another. Our Great Lakes are rimmed by nuclear power plants that are tremendous risk factors to the health and safety of the millions of people that live near and depend on the Great Lakes. To extract severe economic cost from taxpayers to support a system that cannot compare with renewable energy sources in terms of safety and efficiency is to fail as human beings...we fail each other...our children and our grandchildren and their futures. Arlene hickory.
