**Subject:** OPPOSITION COMMENT UNDER CASE # 14-1297-EL-SSO

Dear sirs:

I have been increasingly fearful in recent months and years of the deterioration of nuclear power plants and the disasters that have occurred with some of these plants. As a resident of Findlay, Ohio, I feel practically in the shadow of the Davis-Besse plant and have long been worried about it. Because I take these sorts of problems very strongly to heart, I have refrained from reading too much about the details of the severe accidents that were barely prevented, but I am aware that these existed. I do not want to learn first hand what it is like to live (or die?) with the type of experience of Chernobyl or Japan. To make matters worse it is located on Lake Erie, one of the few sources of fresh water, which is facing its own severe problems already, probably complicated by the heat from Davis-Besse.

Now I learn that you may expect me to pay extraordinary amounts of money to try to patch this monster of a plant back together. Surely you are aware that in the not so distant future these plants will be obsolete and disappearing. This one is not worth saving and should be replaced with a safer alternative, preferably from sustainable energy. We most certainly should not be investing huge amounts of public resources into old technology that could also be our undoing.

Sincerely, Mary Harshfield, Findlay, Ohio
