14-1297-EL-586

Stop the First Energy bailout

14-1297-EL-880

Duke Energy, AEP, and First Energy teamed up to file proposals with the Public Utilities Commission of Ohio (PUCO) to get permission to raise consumer rates and use the profits to ~~replace~~ ~~outdated~~ ~~and~~ ~~was~~ ~~inefficient~~ coal plants to consumers.

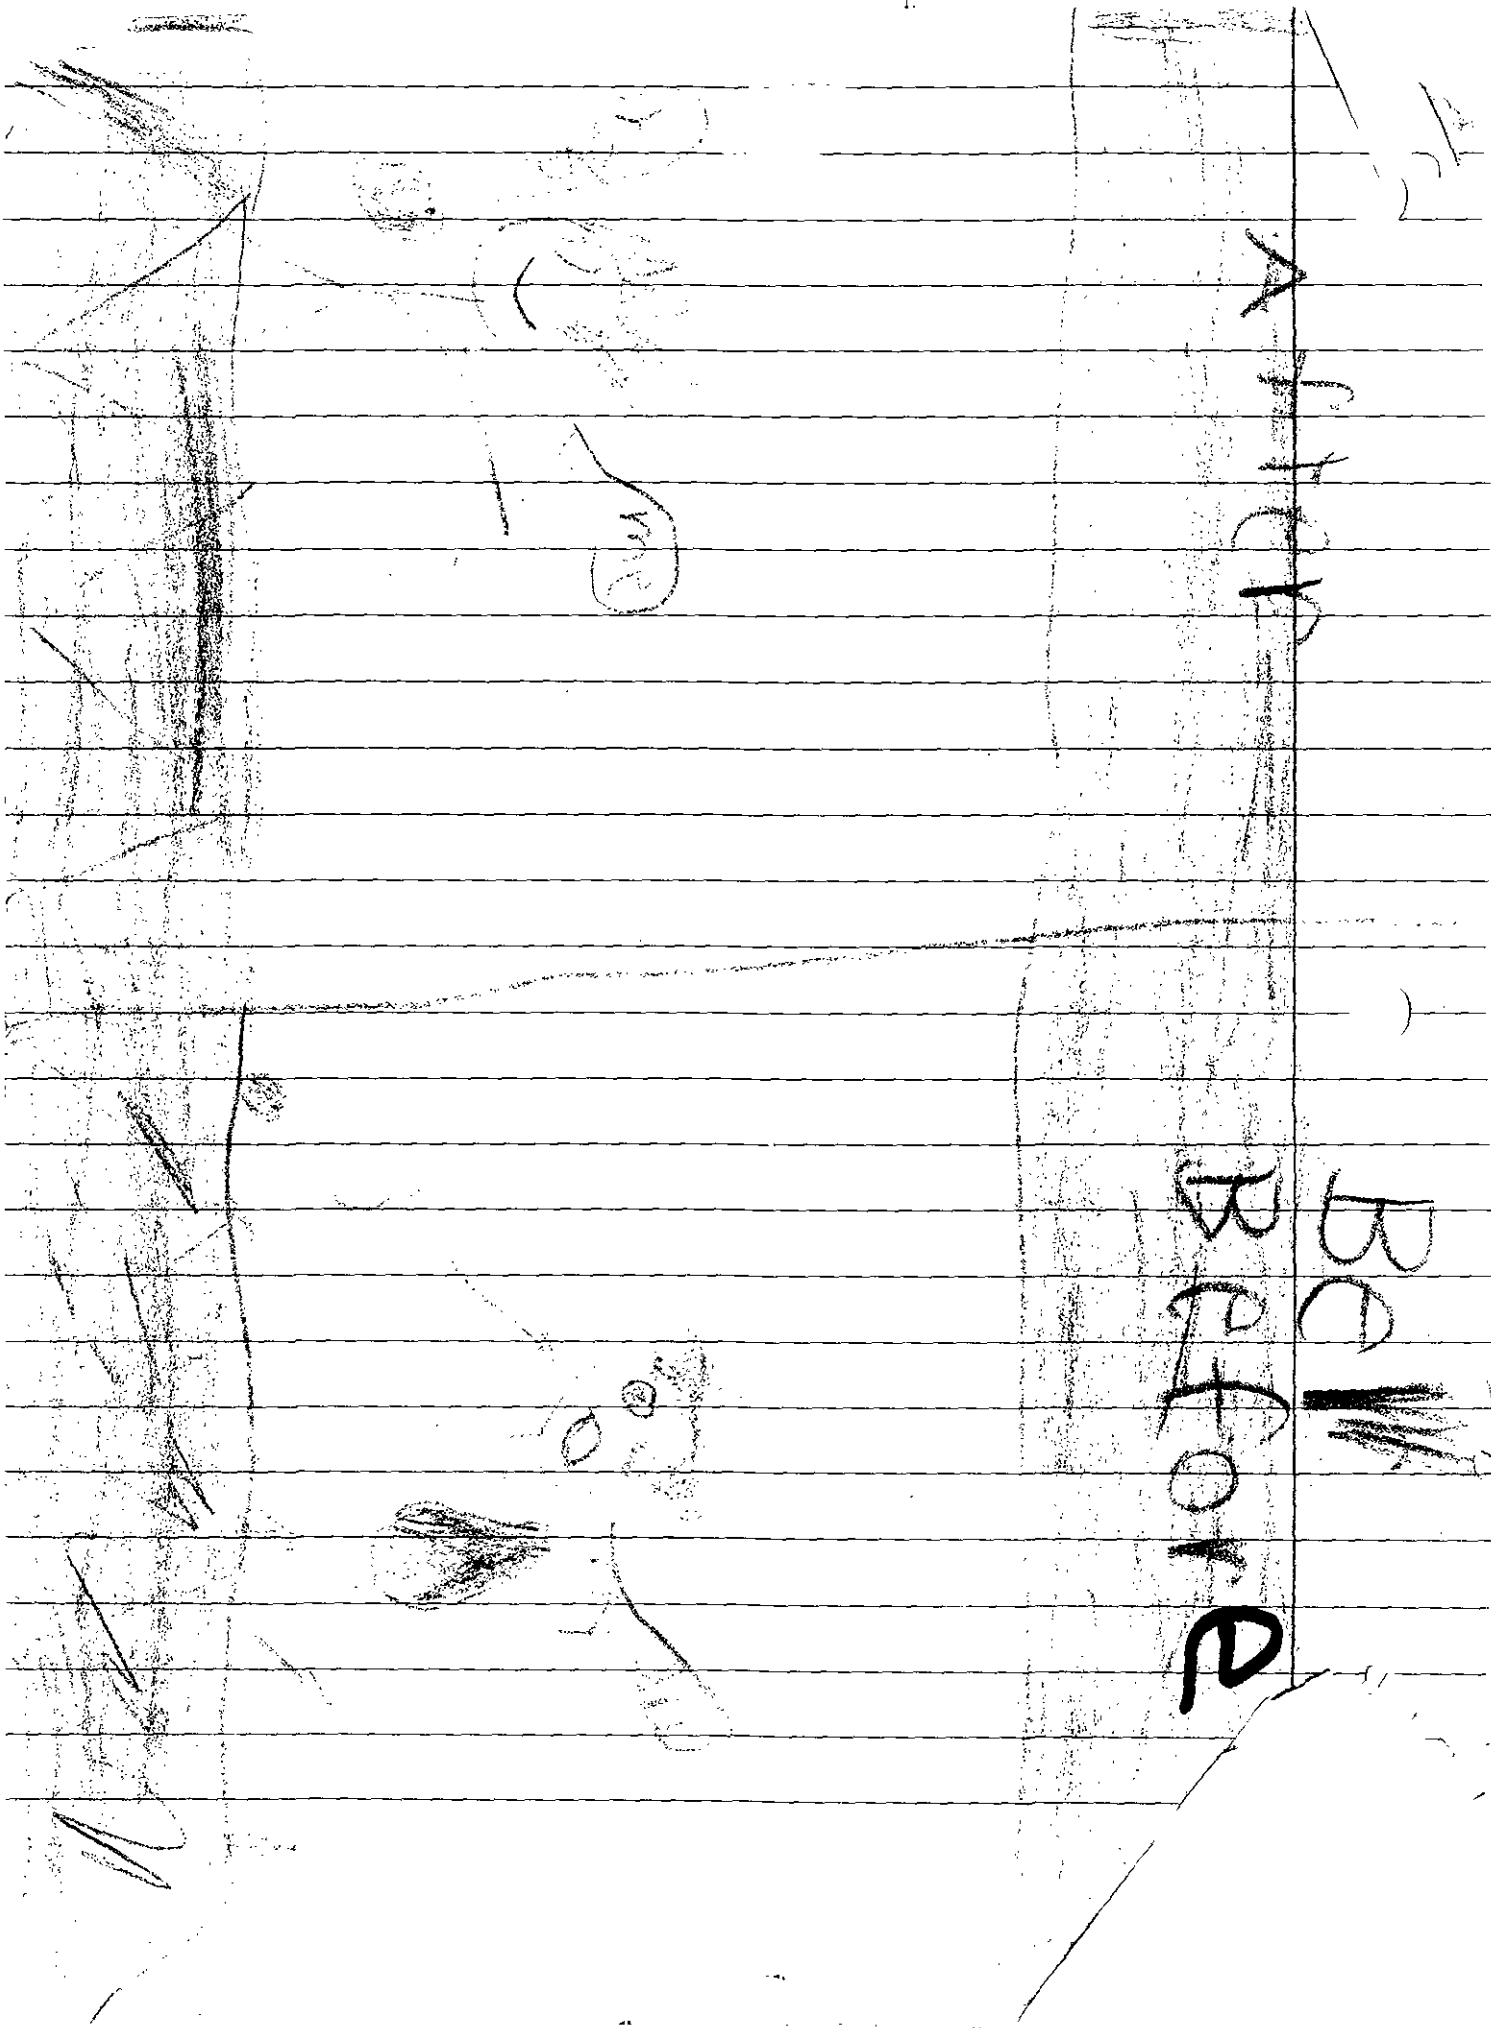

If the PUCO approves their plans, rate payers would have to pay First Energy, Duke and AEP specifically for the power from these plants.

This request is a bailout because they are asking the PUCO to be allowed to have a "Purchase Power Agreement." Customers have to purchase power from these plants. These plants are well beyond their prime, and they cannot compete economically or environmentally. This would be a "nonpassable" charge on your electric bill - meaning that even

if you have chosen a different provider, you still have to pay the increased rates.

If these utilities were able to sell this generation capacity at a profit on the open market, they wouldn't be asking for customers to bail these facilities out. Millions of Ohio consumers paid billions of dollars to these same utilities for their transitions to deregulated power plants under a 1999 Ohio law. Fifteen years later, they are again asking consumers to pay charges related to the power plants. They've made it clear in their filings that if they don't get this request, these plants could be forced to retire.

Dear Sir or Madame,

I am writing to you today to ask that you invest Ohio's resources into renewable energy. Now is the time to reduce toxic pollution of the land of our great state. We deserve to breathe clean air and drink clean water. Please do not grant a bailout of the Kyger Creek and Clifty Creek coal plant. Thank you for your time.

Sincerely,

Elizabeth Meister

11095 Parkwood Ave
Fairview Park, OH 44126

#14-1297-EL-550

21250 Cromwell Ave. • Fairview Park, Ohio 44126 (440) 864-5352

As a small business owner and state citizen and taxpayer, I do not want my government to support backward looking policies in the interest of our states' dirty energy providers. If there was ever a time to start incentivizing any business, it should be in favor of renewables. We as a state and a country must start to set an example for all the world to see. We as a country have produced massive amounts of pollution and the costs of this is largely born by the taxpayers and not the polluters. While our status quo energy providers lobby politicians for bailouts and subsidies, it seems that no one is offering the Ohio or indeed the US citizens any form of relief. I strongly oppose any form of bailout for FirstEnergy in regards to case # 14-1297-EL-SSO.

Sincerely, Alan Zink

August 18, 2015

Public Utilities Commission of Ohio:

I was born in and have been a resident of the state of Ohio for the past 62 years. I am not only concerned about the toxic pollution in our state for future generations; I am concerned about this serious issue for those of us living here now.

Your duties include doing what is best for the people of Ohio relating to public utilities. Keeping this in mind, I request that you not support rate increases which will force us to purchase power from old, dirty coal plants. I also ask that you support stricter environmentally friendly regulations and the enforcement heavy fines for companies responsible for toxic pollution. Finally, I request that bailouts of all polluting technology cease.

The good people of the state of Ohio trust you to do what is morally right, not what may help line the pockets of those who are getting rich at our expense. Please live up to our expectations.

Sincerely,

Linda Lupson

case #14-1297-EL-SSD

8/18/15

To the members of PUCO:

Please deny First Energy's proposal, case # 14-1297-EL-SSO, for a power purchase agreement that would translate into a rate increase on my electric bill.

If, as a consumer, I get to vote with my dollars, then I would rather be voting for an energy producer that generates a clean, sustainable electricity. One that doesn't operate inefficiently. One that doesn't lay waste to our land and pollute our air and water. One that moves us forward with new technology rather than shackles us to the old.

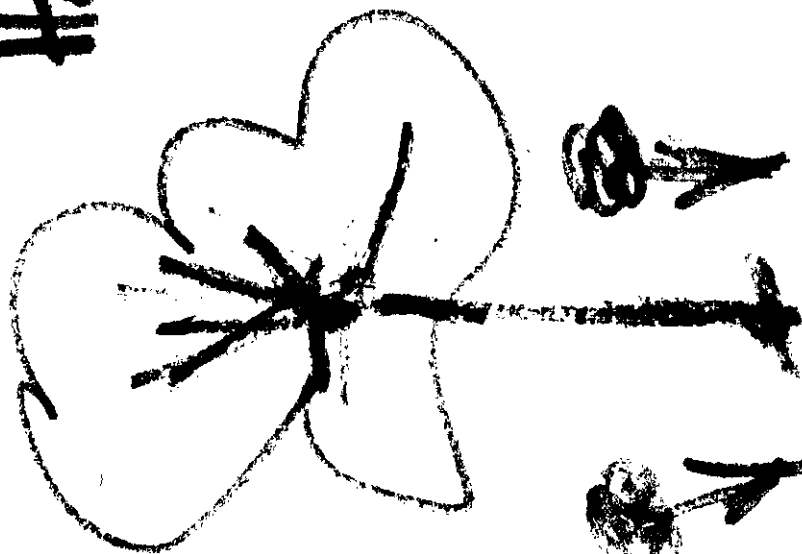

Sincerely,

Kimberly Mann

Columbus, OH 43125

14-1297-22-550

Dear Public Utilities Commission Members:

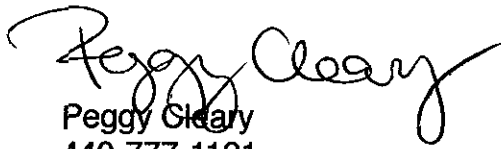

I am writing to ask that you DENY the rate increase that would lock consumers into buying power from Ohio's coal plants. Research has shown that burning fossil fuel increases the toxic pollution, delays inevitable investment in efficient and renewable energy, and truly benefits only the shareholders who have a financial interest in Ohio's oldest and dirtiest coal plants.

I urge you to deny the rate increase and not support the further bailout of old, polluting technology.

It is my hope that going forward, the commission members demonstrate leadership in voting to support renewable energy.

Your vote against this issue would be greatly appreciated.

Regards,

Peggy Cleary

Ref: FirstEnergy Case # 14-1297-EL-SSO

Commission Members:

It is time to provide Ohioans with better energy choices. I oppose the bailout of old, polluting technology. There are ways to use coal in a cleaner manner that have existed for over 40 years but have been shelved. Pouring dollars into old plants only benefits utility shareholders and delays investment into more efficient uses of fossil fuels and renewable energy, including fuel cell generators that use waste material for fuel.

My husband and I, now on middle-class retirement fixed income, are concerned about rising energy prices caused by out-of-date, polluting technology needing repair with no solution to pollution.

Please deny the rate increase which will lock consumers into higher prices for power from Ohio's oldest, dirtiest coal plants. Insist on cleaner processes.

I care about this because I want Ohio to become a leader in conservation and sustainability, a place that will attract families and businesses because of its respect for the limited resources of our planet.

Sincerely,

Janelle Reardon

August 18, 2015

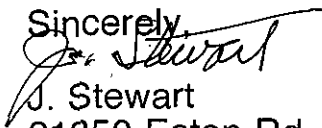

Dear PUCO Members,

I am writing to urge you to oppose First Energy's request (Case # 14-1297-EL-SSO) before your body to increase their rates to consumers, in order to subsidize their outdated plants and equipment in various locations across the state.

While First Energy reported first quarter earnings of \$222 Million — an increase of \$14 Million over 2014 first quarter earnings — Senior Citizens like me are forced to cut back on almost everything, just to make ends meet.

Please don't allow First Energy to shift the burden onto us — DENY their request.

Sincerely,

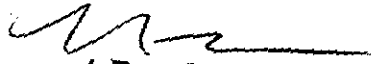

A handwritten signature in black ink, appearing to read "J. Stewart", is written over the word "Sincerely,".

Case #14-1297-EL-350

Ladies and Gentlemen:

Please deny the rate increase to lock consumers into buying power from Ohio's oldest, dirtiest coal plants. This issue is important for our children and grandchildren's current and future health; we can do better to reduce pollution. FirstEnergy does not have a stellar reputation in the last 20 years for doing the right thing. Of course I want the lights to stay on, but these expenses to be charged to poor and middle class citizens for the electric company to keep outdated plants does not seem reasonable or fair.

Sincerely,

Marie Ciarlillo

Re: PUCO Case number 14-1297-EL-SSO

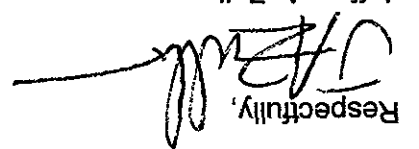

Dear Commission Members:

As a concerned citizen and supporter of environmental issues, I would please ask that we deny the rate increase to lock consumers into buying electricity from the coal plants. My family and I care deeply about reducing carbon pollution and in creating a safer and cleaner environment for the future.

Ever since I was a young boy I have learned about the dangers of coal and oil and the threat they pose to our planet. I implore you to please take leadership in planning a cleaner, brighter, and sustainable future for the state of Ohio, the United States, and for the entire global community.

I ask that we embark on a new mission to explore and fund clean energy methods such as solar, geothermal, wind, and wave action electricity generation. Ohio is a proven provider of sustainable energy and is ready to leave the fossil fuels in the past where they belong.

Thank you.

Respectfully,

Jeffrey A. Zullo

14-1297-EL-SSO

Dear Governor John Kasich and the Public Utilities Commission of Ohio,

I am writing this letter to both offices, because I am concerned about the future of the state of Ohio. Though I know that Ohio has had a rich history in its coal mines, and that the jobs of many citizens of Ohio are invested into that industry, it seems that the coal mines we are using may cause our citizens more negative long term effects. The Duke Energy, AEP and First Energy requests to raise the rates that pay for their current system of supply does not guarantee a better life quality for citizens who have been effected by air pollutants along with their increased rate. I would urge for the government of Ohio to find a way to keep utility rates from rocketing. If they are to keep the coal plants, their methods need to be more efficient and be shown to have a decreased amount of pollution. Their efforts to move forward need to show they have a commitment to the health and well-being of the citizens of Ohio. Even if that means they must invest long term in different source of power.

Please take in consideration the long term effects these plants have on our state, and seek any wise counsel you can find on amending the problem to invest in future generations of Ohioans.

Thanks for your time,

Debra Thompson

To public Utilities Commission of Ohio:

First Energy Case Number: 14-1297-EL-SSO

I hope my letter finds you well, and that you will consider strongly and emphatically denying the proposed rate locks and increases proposed by First Energy. This is important as bailing out an obsolete, pollution spewing technology today, while beneficial to a very small number of large shareholders, seems only to "kick the can down the road". It potentially saddles our children and all future generations with even vaster infrastructure burdens and ignores the inevitable need for renewable or at least sustainable energy sources.

Our family cares about the environment, and the financial well being and viability of our state. Rather than trying to continue fulfilling our energy needs with the oldest, and dirtiest coal fired plants, Ohio should strive to be on the cutting edge of innovation in energy production and resume its mantle as one of the most technologically dynamic and productive states in the nation. We should strive to create indispensable, safe, renewable, and efficient power plants and not reward those that fall short of that goal on every metric.

I stand with thousands of fellow Ohioans and urge you to consider these points when denying First Energy's request, willful obsolescence simply cannot be rewarded while thousands of Ohio families struggle just to get by with their daily lives.

Thank you,
