Dear Sir/Madam,

I am deeply concerned about the plan to keep old, inefficient coal-fired power plants by charging customers like us. This is providing an incentive to the power companies keep their inefficient and uneconomical power plants longer at the expense of citizens like us.

We are already burdened by the never ending price hikes that your commission keeps on approving. Now non-generation related charges makes up more than 50% of our bill.

If the power companies cannot compete in a free market, they should get out of the business of power generation and distribution.

I kindly request you to deny this outrageous and unfair bailout.

Thanking You,

PUCO

To Whom it may Concern at the PUCO,

Re: 14-1297-EL-SSO and 14-1693-EL-SSO

We all need electricity, but we do not need to prop up the electric companies and their share holders dividends at the expense of public and environmental health. We all know that coal results in environmental damage, beginning with the mining process and ending in the pollution caused by burning the coal, which pollutes the air and water we all share. We all know that coal is finite and we will have to find new sources of energy. First Energy and other utility companies are trying to delay the inevitable for short term profit. Please oppose an "indefinite freeze" in our clean energy standards. *We should not have to pay more for electricity, so First Energy can continue to run their inefficient plants,* while at the same time, First Energy opposes the expansion of clean energy such as wind and solar.

Thank you,

Deborah Wright

To Public Utilities Commission of Ohio,

I am writing to you because I am concerned about our state's continual use of coal without increased incentives for alternate energy i.e. wind and solar. Of course they are more expensive now but if the state would encourage more development in both then in the long run the cost would come down and we would be more attractive to companies moving to the state. Helping the coal utility industry by increasing rates to lock consumers and freezing of clean energy standard is short sighted. Technology is changing rapidly and the state should encourage rather than discourage the change.

Thank You
Mrs Debra Haardberger

re: case numbers 14-1297-EL-SSO
14-1693-EL-SSO

To the members of the Public Utilities Commission of Ohio,

My family and I care deeply about reducing pollution and saving money on our electric bills. I am writing to ask you to DENY the rate increase the energy companies are requesting by locking consumers into buying power from Ohio's old, dirty coal plants. A bailout of old, polluting technology delays investment in efficient and renewable energy sources. I also oppose an indefinite freeze of clean energy standards, which further curtails investment in renewable energy. Reducing our dependence on coal for electricity reduces contamination of air and drinking water from Lake Erie and the Ohio River.

Thank you for your prompt attention to this matter.

Sincerely,

A handwritten signature in cursive script that reads "Lynn Weinstein".

Columbus, OH 43215

To whom it may concern,

I am writing regarding case number 14-1297-EL-SSO and case number 14-1693-EL-SSO. I urge you to deny the rate increases to Ohio's major utility companies (First Energy, Duke Energy, AEP) that will lock consumers into buying power from coal power plants that contribute to pollution problems in our communities. I care deeply about the health of the environment for my family's health and safety (I personally suffer from asthma), and do not want the state to impose an indefinite freeze of our clean energy standards. I find it morally offensive that a freeze of environmental standards would be conducted to solely protect the financial interests of major utility companies, as well as delaying further needed investments in development of efficiency and renewable energy. Please consider the needs of your citizens and our communities, rather than the desire for corporate profits above all else.

Sincerely,

A handwritten signature in black ink, appearing to read 'Neal Kozlowski', with a stylized, cursive script.

Columbus, OH 43215

Dear Sir or Madam,

My name is Marilin, I am 20 years old and going to be a fresh Environmental Science undergraduate this fall. I strongly support the health of our environment, people and animals. With this letter I am expressing my discontent with the actions of Duke Energy and First Energy aiming to raise consumer rates and use the profit to cover the cost of their expired and inefficient coal plants. First of all, I believe that reducing our dependence on coal for electricity reduces mercury and levels of pollution in the drinking water from Lake Erie and the Ohio River. Secondly, I think it is important to limit air and water contamination, because it leads to fewer deaths and better health in general. Pollution in Ohio affects the neighboring areas as well. I think it is time to start thinking about more efficient and environmental friendly sources of energy. I believe our health and the Earth's well-being is worth the changes towards a better quality of life.

Yours faithfully,

Marilyn Saluveer

Re: Case numbers 14-1297-EL-SSO and 14-1693-EL-SSO

I am the mother of two young adults, one a recent college graduate and the other studying Environmental Engineering with a concentration in Renewable Resources. It has been brought to my attention recently that there is a rate increase proposal coming from the power companies that will lock consumers into buying their power from companies that rely on coal production. These companies have profited greatly from this energy source and have refused to put some of those profits into doing research for cleaner and more efficient energy sources. Politicians continually shoot down attempts to pass legislation that will help "clean up their act" because of the high costs associated with the standards that should be enacted, while their executives take home bonuses and salaries that are just "indecent". Like everything else in this day and age, everyone wants a handout to make it all go away. A bailout for these companies only makes the shareholders happy and further delays research into better efficiencies.

My family and I care about the environment and our most precious resource in Cleveland, Lake Erie. Reliance on Coal-fueled electricity is increasing the amounts mercury and other contaminants in the water system. I keep hearing that other areas want to pipe in water from Lake Erie as more fresh water sources dry up. Is this not a resource worth protecting?

Please support legislation that will help these power companies clean up their acts and become fiscally responsible for the money hard working citizens pay them. We need to rely on them to provide us with the most efficient, economical, and most importantly clean, power that is available. Someday I hope to have grandchildren and I hope, when I take them down to the lakefront parks so close to home, I want them to see the beauty and strength of Lake Erie and the potential it has to solve so many problems if we can keep it clean.

Thank you for your attention ,

Reducing our dependence on coal
for ~~our~~ electricity reduces mercury
and other contamination from
polluting drinking water from Lake
Eric and the Ohio River

104 Clarmont

Brunswick OH 44212

14-1297-02-SSO

14-1693-02-SSO

To the Public Utilities Commission
of Ohio

I don't feel that it's fair
that these energy companies
are trying to get permission
to raise the Consumers Rates
to cover the cost of their outdated
and inefficient coal plants.

A bail out of old polluting
technology only benefits utility
share holders and delays inevitable
investment in efficiency & renewable
energy.

Brunswick OH

Resident

PUCO

2-2-16

Dear PUCO Board,

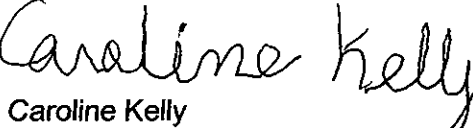

I am writing today to implore you to deny the rate increase to lock consumers into buying power from Ohio's oldest, dirtiest coal plants. Please oppose and "indefinite freeze" of our clean energy standards. Ohioans need clean energy now! A bailout of old, polluting technology only benefits utility shareholders and delays investment in efficiency and renewable energy.

My family and I care about reducing toxic pollution and saving money on our electric bills. Reducing our dependence on coal for electricity reduces mercury and other contamination from polluting drinking water from Lake Erie and the Ohio River. We live on the shores of Lake Erie and swim and fish there often.

In particular, I am writing about the cases numbered 14-1297-EL-SSO and 14-1693-EL-SSO. We are concerned citizens of Ohio and would like our voices heard in favor of clean energy and reducing pollution in our water.

In addition, limiting pollution to our air and water leads to fewer deaths and sicknesses for everyone, inside and outside Ohio, something we Ohioans should be very concerned about as we are a Great Lake state. Clean energy is the future and Ohio should lead the industry.

Sincerely,

Caroline Kelly

Case Numbers:

- 14-1297-EL-SSO
- 14-1693-EL-SSO

Dear Commission Members,

There's no snow in Cleveland—quite a surprise for January. If this doesn't provide you and your cabinet members with sufficient evidence of global warming, consider the floods, droughts, ice melts, etc. impacting plant and animal life as well as people on the rest of planet.

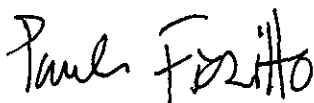

Ohio can take one small step toward environmental integrity by limiting the use of polluting coal technology while minimizing utility costs effecting residential and commercial energy consumers by denying the PUCO rate increase.

I don't own stock in the utilities, but I do regularly pay my bills. Consumers should not have to bear the financial burden of converting old power plants into efficient systems utilizing renewable energy resources. Please deny the PUCO rate increase.

Close to home, Lake Erie's ever-expanding dead zones and algal blooms play havoc with the aquaculture and drinking water. Limiting air and water pollution benefits all Ohio residents with quality air and potable water, contributing to quality of life and reducing environmentally related illness.

Please, deny the PUCO rate increase.

Best Regards,

A handwritten signature in black ink that reads "Pamela Fioritto". The signature is written in a cursive, flowing style.

Dear Sir/Madam:

I am writing to request that you deny the coal companies permission to raise consumer rates by bailing them out, thereby enabling them to use their profits to cover the costs of their outdated and inefficient coal plants. A bailout for the energy companies would only benefit shareholders of the energy companies and delay research and investment in renewable energy.

More specifically, I am requesting that you impose increased clean energy standards which require the energy companies to utilize a greater percentage of renewable energy. I believe that limiting pollution caused by the burning of coal to our air is a worthy cause.

Kind Regards,

Jack D. Gau

14-1297-EL-SSO
+ 14-1693-EL-SSD

January 14, 2016

Dear PUCO:

I am very concerned about your request to the state of Ohio to give rate increases to lock consumers into getting their energy from coal plants, which are ruining our environment and our most precious resource, our waterways and Lake Erie. The news of Flint, Michigan is very fresh and very terrifying; since the government knew the water was polluted with lead for 2 years and did nothing, poisoning residents, especially children who are more susceptible to lead poisoning. It is not a forward looking strategy to bail out old polluting technology. Ohio needs to invest in efficient and renewable energy to improve the future. My family and I care about reducing toxic pollution. I want to achieve a healthy environment for myself, children and grandchildren.

PUCO should not be bailed out by the consumers or given financial incentives to continue using old polluting technology.

Sincerely,

Beth DeGaetano

Dear Governor Karick,

Regarding case numbers 14-1297-
and 14-1693-EL-550, I am EC-550

upset by plans to increase our rates
to keep the old, dirty coal plants in service,

Also an "indefinite freeze" does not
make sense for our clean energy standards
that keeps us from encouraging new
ways to implement clean energy.

My husband and I worry about toxic
pollution from old coal plants, and we
want to save money on our electric bills.

If we can limit pollution in
our air and water, we can save
lives and chronic illnesses can
be reduced.

So don't stay with past technology
that delays the future, which is
renewable energy.

Thank you,
(a concerned citizen) Karen L. Ault

Puco

To whom it may concern,

I am writing you to express my belief that we need to oppose an "indefinite freeze" of our clean energy standards case number 14-1297-EL-SSO and 14-1693-EL-SSO. I am not here to argue about global warming, or climate change, whatever people want to call it now. I do want to say that I believe most people can agree that something should be done to help protect our world; to minimize pollution to our air, water, and soil.

I grew up on the coast of Lake Erie. I used to go to the beach at least once a week during the summer. To have this great attraction and place to enjoy family and friends was a blessing. Years later, my thoughts are the opposite. I do not even think about going to the beach, let alone get into the water. I see pictures of people in it and ask why? Who knows what may happen to them! There is no pride of saying you grew up by Lake Erie.

The use of renewable and clean energies can vastly improve the lake and bring it back to where it once was. The clean energy standards in Ohio should not be on a freeze anymore. I am thrilled of the new plan to build wind turbines in Lake Erie. With the amount of wind I remember growing up, I know they will produce huge amounts of energy. These energy standards will help this project and get many more started. Our state and country is much more advanced in our technology than any other country, why don't we use it?

Thank you for your time and thank you for everything you have done for this state. This state has really improved the past decade and I am beginning to increase my pride of the state I live in. Let's keep this momentum moving, and make Ohio a much cleaner state with a huge attraction waiting to be restored!

Sincerely,

Cory Hutter

To Whom It May Concern,

I am writing this letter to you in regard to case numbers 14-1297-EL-SSO and 14-1693-EL-SSO. These cases relate to the generation of energy within our state, and how safely and cleanly that energy is generated.

I feel very strongly about protecting our environment and reducing our dependence on fossil fuels. I support the advancement of sun, wind, and hydroelectric sources of energy.

I am very upset by the current situation. A conglomeration of energy suppliers that are supporting old technology (AEP, First Energy). They are supporting a system that pollutes our environment, causes deadly health issues, and doesn't look forward, for the benefit of our state and our country.

By supporting alternative energy sources, you can lead our state, and our country. Solar, wind, and hydroelectric energy sources have minimal impact on our environment. By developing these industries, Ohio can be at the forefront of increased employment, reducing global pollution, and creating a country without the burden of extreme healthcare costs. Equally important is decreased energy costs, and setting a very important example for the rest of our country.

Thank You

Columbus, OH 43215

To Whom It May Concern,

My family and I care about reducing toxic pollution. Reducing our dependence on coal for electricity reduces mercury and other contaminants from polluting drinking water from Lake Erie. Furthermore, limiting pollution to air and water may lead to fewer sicknesses for everyone. Please oppose and "indefinite freeze" of our clean energy standards. Please deny the rate increase to lock consumers into buying power from Ohio's oldest, dirtiest coal plants. This letter is in regards to case numbers 14-1297-EL-SSO and 14-1693-EL-SSO.

Warm regards,

RE: Case Numbers 14-1297-EL-SSO and 14-1693-EL-SSO

To Whom It May Concern::

Given the recent devastating chain of events in Flint, Michigan, we would urge you to take the necessary steps to reduce toxic pollution in our air and water here in Ohio. Not only should we reduce our dependence on coal for electricity to avoid contamination in our drinking water, we do NOT want to be locked into consumer rates with buying power from Ohio's oldest and dirtiest coal plants. My family and I care about reducing toxic pollution and saving money on our electric bills.

Limiting pollution to our air and water leads to fewer deaths and sicknesses for everyone, inside and outside the state of Ohio. Please oppose an indefinite freeze of our clean energy standards. As your constituent, we urge you to take a stand and act in the best interest of the people.

Regards,

Ericka Owens

Re: 14-1297-EL-SSO and 14-1693-EL-SSO

I am writing to urge you to take all necessary action as quickly as possible to take such actions denying the push by First Energy and other coal-based utilities from push the PUCO to adopt rules that would increase the purchase of coal-generated energy. The PUCO should adopt such regulations that will decrease our dependence on coal-burning energy generators in our State. It is well-known that these utilities are the greatest environmental threat we face – the amount of pollution generated by the coal-based utilities dwarfs all other sources. Our greatest natural resources, Lake Erie and the Ohio River are threatened as are the jobs that depend on their health.

Thank you.

Re: Case # 14-1297-EL-SSO and 14-1693-EL-SSO

We are absolutely outraged and offended by the request of the Energy suppliers including First Energy to approve a longterm rate increase to sustain the outmoded, polluting and unsafe nuclear power and coal burning plants in Ohio.

These plants are major sources of pollution, a health hazard especially to children and seniors with chronic health problems and an increase serves only some shareholders and the Energy Companies already overpaid executives, while further increasing the cost of health care to individuals and to the State of Ohio.. Furthermore, to provide the companies with an indefinite rate increase is outrageous and simply lines the pockets of these irresponsible executives at the expense of the health of the most fragile of our citizens, including those with the lowest incomes. To allow toxic products to poison our environment and produce health-threatening climate change is against every principle of decency and responsibility towards our children and grandchildren and a surrender of our moral obligation to the health of the citizens of Ohio and our neighbors..

Our natural treasures, Lake Erie, the Ohio and others rivers and waterways are assets we dare not pollute any further and the already evident pollution, algae and often undrinkable water for human consumption is irrefutable evidence of the danger we are creating for ourselves and future generations.

We, as a physician practicing and teaching Pediatrics in Ohio for nearly 40 years and a nurse, have had ample opportunity to personally see the illness and irreversible damage to children resulting from pollution from lead and other toxic products. The financial cost to their families and to all citizens of the State of Ohio for their medical care and support is outrageous and morally repugnant. To reward the Energy companies with further rate increases simply excuses them for their irresponsibility in

allowing these people to suffer and is not worthy of the purported responsibility and moral obligation our State Government is elected to carry out.

The newer technology to provide clean energy is readily available and should be the immediate goal and investment by the energy companies, especially First Energy. Instead, to sacrifice the health of our current and future citizens by subsidizing and sustaining outmoded and health-threatening current technologies and production methods is morally bankrupt. If the State of Ohio approves the energy companies' request it would be a crime against humanity and a complete lack of morality and responsibility towards the citizens our elected government swore to serve.

To Whom It May Concern,

As you are most probably aware, coal energy is not clean nor truly efficient. Coal dirties the atmosphere, polluting our ozone and planet with chemicals and greenhouse gases that hinder the health of Earth. Personally, my family and I care about reducing the pollution of our planet by any way we can: recycling, reducing garbage output, and reusing what we can inside the home. By taking away our dependence on coal as a source of will limit the pollution and carbon footprint of Ohio. This will lead to reducing the deaths and illnesses of our neighbors since water and air are so detrimental to our own health, and to all life on Earth. I would urge you to consider changing from coal to any number of renewable resources like air, water, or solar to support our great state.

Sincerely,

Courtney Harmon

Dear Commissioners,

Regarding case numbers 14-1297-EL-SSO
and 14-1693-EL-SSO, I am upset by
plans to increase our rates to keep the
old, dirty coal plants in service.

Also an "indefinite freeze" does not
make sense for our clean energy standards.
That keeps us from encouraging new
ways to implement clean energy.

My husband and I worry about
toxic pollution from old coal plants,
and we want to save money on our
electric bills.

If we can limit pollution in our
air and water, we can save lives
and chronic illnesses from pollution
can be reduced.

So don't stick with past technology
that delays the future, which is clean
renewable energy.

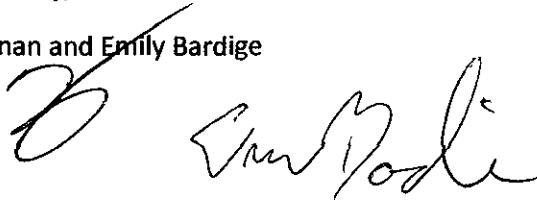

Thank you,
a concerned citizen, Karen S. Gault

Dear Members of the Public Utilities Commission of Ohio,

My family and I are writing concerning the freeze of our clean energy standards and the requests by FirstEnergy and other energy companies to raise our rates in order to cover the costs of their inefficient coal plants. We do not support FirstEnergy's choice to divert its resources from renewable energy sources and towards high-pollution, coal plants. This plan simultaneously increases pollution and raises costs on consumers, including homeowners like ourselves, and many of the Ohio businesses we frequent. If given that choice, I know of no consumer who would choose to pay more to receive less. But that is exactly what FirstEnergy is proposing. We take resources away from exciting new technologies, which may offer many more Ohio jobs, as well as lower long-term energy costs for everyone. We support the oldest and dirtiest coal plants, harming our water and air supplies with no economic benefits. We subsidize wealthy energy magnates who do not need our charity. On top of all of this, we are being asked to pay more -- over \$71 dollars over the next three years per customer. This is not fair, it is not right, and it is not what we voted for. Please consider rejecting FirstEnergy's cases 14-1297-EL-SSO and 14-1693-EL-SSO.

Sincerely,

Brenan and Emily Bardige

RE: Case Numbers 14-1297-EL-SSO and 14-1693-EL-SSO

I am the mother of a seven year old; I care deeply about his future. I strongly believe we need to limit our dependence on coal to generate electricity. It contributes to air and water pollution, it violates clean energy standards. It contributes to the buildup of greenhouse gasses warming our planet.

First steps include to deny the proposed rate increase that forces consumers to buy electricity generated by coal and to oppose a continuation of the freeze on clean energy standards. Please protect the Ohio River and Lake Erie from mercury and other contaminants, protect our air quality.

Second, please encourage investment in more efficient and renewable sources of energy in our state. Please stand on the right side of history.

Thank you for your dedication and leadership.

Sincerely,

A handwritten signature in black ink, appearing to be 'SR', followed by a long horizontal line extending to the right.

Dear Members of PUCO:

I have a young daughter and we care about clean energy for the state of Ohio. Clean energy would lessen the risk for polluted drinking water from Lake Erie and the Ohio River. It is time that Ohio consider alternatives to coal energy, such as efficient and renewable energy. Please consider passing legislation that doesn't benefit utility shareholders and invests in renewable energy initiatives. In addition, we need to make sure Ohio passes laws that improve clean energy standards.

Thank you for your attention to this important topic.

RE: Freeze on Ohio Clean Energy Standard;
Case Numbers 14-1297-EL-SSO and 14-1693-EL-SSO

Dear PUCO,

I am writing to express strongly my concerns regarding the "indefinite freeze" on Ohio clean energy standards. Such standards are essential to maintaining the health of all of Ohio's residents. As recent events in Flint, Michigan have illustrated, ignoring or minimizing the seriousness of pollutants in the drinking water can have serious medical consequences particularly for children's health. As a pediatrician, I am very concerned that the freeze on clean energy standards will result in long and term adverse health effects by allowing air and water pollution to continue unchecked. I would ask that you reconsider the state's current and future energy policies, including ending the freeze, and remember the importance of Ohio's youngest citizens' health and well-being.

Sincerely,

Katherine M. Dell, M.D.

Case # 14-1297-EL-SSO and 14-1693-EL-SSO

My family feels very strongly about clean, green energy. With all the toxic pollution in our world - I'm hoping you can help reduce our dependancy on coal - esp. in Ohio's oldest, dirtiest coal plants. We need to invest in renewable energy here in Ohio. Please help keep our air & water in Ohio Clean!

Ohio
is
clean energy!

Thank you -

To Whom it May Concern,

RE case numbers 14-1297-EL-SSO and 14-1693-EL-SSO

I am writing to ask you to please deny the energy rate increase currently being lobbied to the PUCO. The coal plants which will essentially be bailed out by these funds are outdated and inefficient, yet this increase locks consumers into buying power from these plants. The energy companies lobbying for this increase are just shifting the burden of these plants to the consumer. It is unjust, unfair, and another example of big power and big money making bad decisions for the people.

It is time to bypass these coal plants and shift resources to more economically feasible and environmentally responsible energy. The "indefinite freeze" of our clean energy standards will only harm our future. However, a bailout of the old coal technology only delays investment in new energy sources.

As is such an important issue in Ohio, reducing our dependence on coal also reduces poisoning of our Lake Erie and Ohio River water.

HUNTER GORDON CAVELL 1/20/16

To Whom It May Concern:

Please deny both petitions known as case nos. 14-1297-EL-SSO & 14-1693-EL-SSO. Forcing citizens to pay for products (outdated energy) they do not use, want, or need is effectively subsidizing private entities and incentivizing these entities from developing economically viable and environmentally safer alternatives. This may even be unconstitutional. We Ohioans must not let these companies remain unfettered & unchecked, & must hold them accountable for their (in)actions. Govern yourselves accordingly.

Very Truly Yours,

14-1693-EL-880

Dear PUCO members and elected officials,

As I sit here today and watch energy prices go lower all over the world I fully expect my own energy costs to see steep reductions. So there are many many reasons why any increases in energy costs and any rate increases are very inappropriate. I am adamantly opposed to any increases that are associated with any of the following.

- 1) Increases to help recover costs associated with non-renewable energy usage.
- 2) Any increases associated with non-renewable energy usage particularly given the sharply reduced cost of those non-renewable energies.
- 3) Any expansion of the usage of non-renewable energy.
- 4) Any increases that would further encourage continued use of older technology that increase global temperatures
- 5) Any increase that would further encourage continued use of relatively high polluting technologies.

Now is the time to encourage use of renewable energy sources, and with that in mind, please, please do what is necessary to remove any temporary or permanent barriers to the clean energy standards.

Thanks for your continuing commitment to serving the people of Ohio, both our current and future generations.

Re: First Energy Bailout
Case #: 14-1297-EL-SSO and 14-1693-EL-SSO

Dear Public Utilities Commission of Ohio,

I demand that you, the members of PUCO, deny the rate increase to consumers. A bailout of old, polluting technology only benefits utility shareholders and denies sharp investment in efficient and renewable energy. This is an extremely important issue to my family and me. We strongly encourage you to take measures to reduce the output of toxic pollution which obviously is better for our environment, clearly better for our health and will ultimately help us save money on our utility bills. Reducing our dependency on coal for electricity reduces contamination of our drinking water. Limiting pollution to our air and water leads to fewer deaths and illnesses and you have an obligation to make this right for us. Keep my family and other Ohio families healthy and safe! Deny the rate increase, stop the bailouts and end the freeze!

Sincerely,

A handwritten signature in cursive script, appearing to read "Kelli C Thomas".

Case: 14-1297-EL-SSO
14-1693-EL-SSO

Dear Public Utilities Commission of Ohio,

I am currently raising my family in Medina, Ohio. We are active in our community and love participating in things that are important to us. Something that we are very passionate about is creating a healthier place for our children.

Please deny the rate increase to lock consumers into buying power from Ohio's oldest coal plants. My husband's grandfather was a miner. The toll that job took on his body was harsh. We are currently living in 2016! We MUST find an alternative!

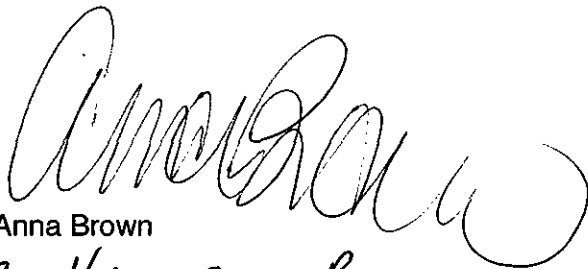

Bringing Lake Erie back to the healthy water source it once was is important, not only for my family, but for all of Ohio. Limiting pollution to our air and water leads to fewer deaths and sickness for everyone.

I have one child that I was able to breastfeed, but one who took formula. Having a clean water source is important for our future generations. Reducing the chance of toxins like lead and mercury should be an easy decision.

Please oppose an indefinite freeze of our clean energy standards. A bailout of old, polluting technology only benefits utility share holders and delays investment in efficiency and renewable energy.

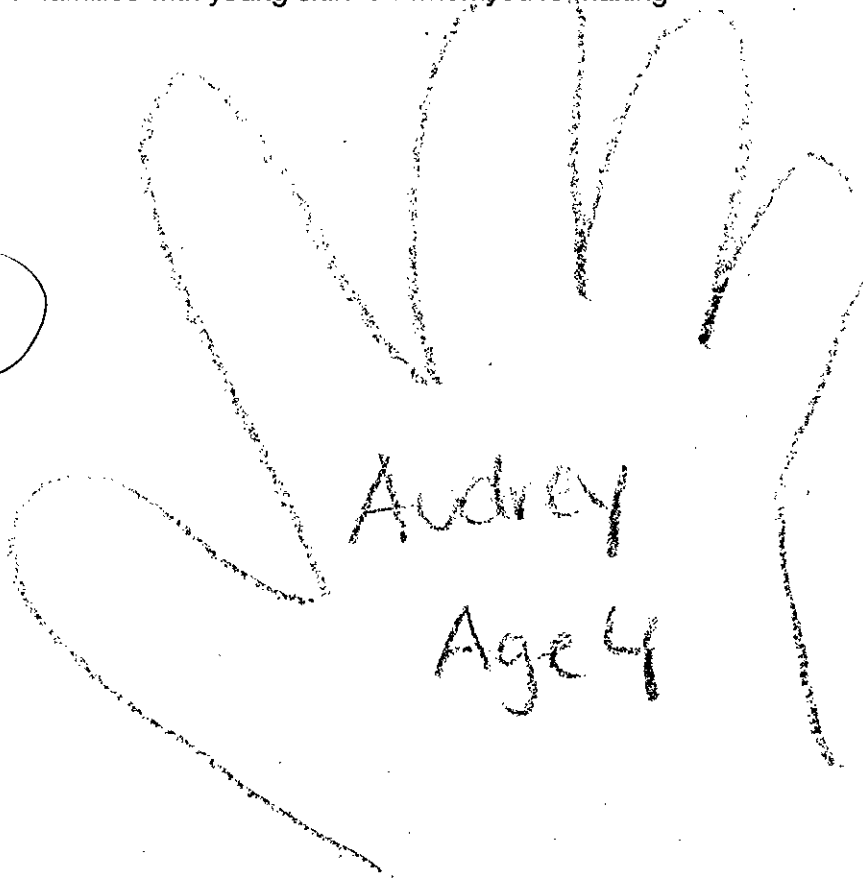

Please take the time to consider the views of families with young children when you're making your decisions.

Thank You

Anna Brown

As an Ohioan, I have great concerns about not wanting to start moving forward with more modern technology for our utilities and industries. We were once close to having Lake Erie being polluted enough, that our drinking water was at risk. I am tired of hearing that big business cannot be told by our government to clean up their old ways of doing business, that they would be forced to close or lay off workers. With the great technology we have today, there is no reason that our leaders cannot work with the utility and industrial companies to come up with cleaner and less polluting ways of doing business. I as an individual have done things in my life to help out. We now have better mileage on our cars, more efficient windows, appliances, and electronics in our homes. Just look back to the 70's and the smog, polluted rivers and lakes we had. It takes time, but now is the time to start before another generation of people have come and gone with nothing being done to help our environment.

Re: Case # 14-1297-EL-SSO
+ 14-1693-EL-SSO

Public Utilities Board,

Lets get this right for
a change!

Our family are very
concerned about reducing
pollution and toxins in our
air and for the need to save
money on our electric bills.

Utility companies have
made huge profits - then cut
their workers and continue
to want increases to our
bills.

We need to cut back on
the pollution of our air and
water to make a safer world
for our future generations. Less
pollution would mean less
sickness and fewer deaths.

We need to protect our drinking
water. Less we have more
problems like Michigan and
Sebring, Ohio.

Its time to stand up
and get something done.

Elizabeth J. Dawes
4383 Raynel Circle
Uniontown, Ohio 44685

Governor Kasich and
PUCO stop the
bailouts and end the

Case Number 14-1297-EL-SSO/ 14-1693-EL-SSO

Dear Public Utilities Commission of Ohio,

I'm writing to you today to express my concern regarding the First Energy bailout. I am concerned about the continued reliance on old, polluting technology that would only benefit the utility shareholders and would delay investing in efficient, renewable energy.

I care deeply about the environment. Continued reliance on these outdated and inefficient coal plants impact the economy and the environment. We need to move forward and invest in clean energy - let these dirty coal plants finally close down once and for all. We need to reduce our dependence on coal for our electricity - by decreasing our dependence we will decrease the toxic contamination that is polluting drinking water from Lake Erie and the Ohio River.

I hope you do the right thing that is best for the citizens of Ohio and the environment, not what will benefit Duke Energy, AEP and First Energy. Thank you for your attention to this matter.

Re: Case numbers: 14-1297-EL-SSO and 14-1693-EL-SSO

Dear Governor:

This letter is to express community concern for dirty fuel consumption in our state. Please deny the rate increase to lock consumers into buying power from Ohio's oldest, dirtiest coal plants. Please oppose an "indefinite freeze" of our clean energy standards. These dirty sources for energy production pollute our water supply and our air. We care about reducing pollution and saving money on our electric bill, but we do not want a Flint Michigan here in Ohio, or anywhere else. Please cease the bailouts of old, polluting technologies in energy production and invest in more environmental friendly ways to generate energy.

Thank you very much.

Dear Public Utilities Commission of Ohio:

I am writing to let you know how much my family and I care about reducing toxic pollution and saving money on our electric bills. **Please deny the rate increase to lock consumers into buying power from Ohio's oldest, dirtiest coal plants.**

Reducing our dependence on coal for electricity reduces mercury and other contamination from polluting drinking water from Lake Erie and the Ohio River which benefits not only those who live in Ohio but others in surrounding areas.

Please oppose an "indefinite freeze" of our clean energy standards. A bailout of old, polluting technology only benefits utility shareholders and delays investment in efficiency and renewable energy.

There is no such thing as clean coal, no matter how much money is thrown into advertising the lie.

Sincerely,

Jill M. Parr

Columbus, OH 43215,

Please consider opposing an indefinite freeze of our clean energy standards. As a mother of 2 sons I would like to think that we as adults have done everything to insure a future of clean water for them. I believe that by reducing our dependence on coal for electricity will reduce the amount of pollutants in our drinking water from Lake Erie and the Ohio River. Remember case numbers 14-1297-EL-SSO and 14-1693-EL-SSO and vote for all the moms who want a future with clean water for there children.

+ 14-1693-EL-SSO

Governor Kasich

Our family cares about
reducing pollution and
saving money on our electric
bills.

We don't feel the Utility
Companies should pass the
cost of their improvements
onto their customers. They
have made profits (huge
profits at times) and still
kept utility rates up.

We feel there would
be fewer deaths and illnesses
if pollution to our air
were limited.

We need to look out
for our next generations
and do something now.

January 26, 2016

To Whom It May Concern:

My family and I are against Duke Energy, AEP, and First Energy teaming up to file proposals with the Public Utilities Commission of Ohio (PUCO) to raise consumer rates and use the profits to cover the costs of their outdated and inefficient coal plants. We do not feel responsible to replace these outdated coal plants as consumers.

As a ratepayer, I do not appreciate having to share a debt of helping other power plants, not in my city, to replace their outdated and inefficient coal plants in a bailout.

I also do not like the fact that as a customer that we have to purchase power from these plants, even when we choose a different provider. These plants are well beyond their prime, and they cannot compete economically or environmentally. This "nonbypassable" charge on our electric bill would be a burden for many people. We realize the fact is that this burden is continually put on citizens. However, who should be responsible for the replacement of these plants? Who should be investing in replacing plants out of their own pockets because customers are already paying them more than enough money to operate and replace them twice over? It could be compared to a slum landlord renting out a room that isn't fit for an animal, but asking them to pay more money each month. If these utilities were able to sell this generation capacity at a profit on the open market, they wouldn't be asking their customers to bail these facilities out in the first place.

We want clean air and water, but a bailout of old, polluting technology only benefits utility shareholders and delays investment in efficiency and renewable energy. People who have money and own these monopolies need to be smarter with the money we have already given them. They need to be visionaries. They need to think of a business plan of replacement and improvement before having to burden the people who are paying them well enough already.

Also, my family and I care about both reducing toxic pollution and saving money on electric bills in the process. It is called efficiency. Many people have learned to be more efficient since 2007. It can be done without this proposed bailout! It is time for everyone in this nation to start being fiscally responsible with private citizens' money in ALL profit situations, especially in public utilities. Do the right thing!

We are opposed to this proposed bailout.

Sincerely,

4271 Willow Wood Ln
Greene, OH

SSO
14-1693-EL-SSO

To Whom It May Concern,

I, as a customer of First Energy, am unhappy with the attempt of rate increases to lock us consumers into buying power from old and outdated plants. I believe that an indefinite freeze on clean energy standards will have mass effects on our quality of life. We need efficient and renewable energy. Which is why a bailout of this old, polluting technology is absurd. As a family with young ones, we care about the quality of our air that we breathe in and the water we drink. If we can reduce the dependency on coal, we can reduce the contamination of our water and air here in Ohio. With fewer contaminants in our air and water, we can have better overall health for the future. Cases 14-1297-EL-SSO and 14-1693-EL-SSO are what I am specifically referring to. Please do the right thing and make Ohio better for our children.
