**Supplemental Information
138 kV Transmission Line
Loops to Yager Substation Project
Case No. 16-0257-EL-BLN**

Dear Mr. O'Dell,

This letter provides supplemental information to the Board concerning the construction of the 138 kV Transmission Line Loops to Yager Substation Project, Case No. 16-0257-EL-BLN. AECOM has completed the limited Phase I cultural resource survey on the Project. AECOM's summary indicates:

"Based on the summary and conclusions of this archival study and field reconnaissance, no further investigations appear to be warranted in relation to the McMillan Cemetery for the Project. There is no conclusive evidence that a cemetery was ever located within or near the Study Area, and the OHPO point-feature for the McMillan Cemetery is almost certainly associated with the cemetery situated on the former McMillan/Patterson land-tract near the intersection of Patterson Road and Baldwin Road, between 1500 and 2000 feet to the west of the proposed pole locations. Should any extant historic-era features or materials associated with a cemetery (such as headstones) be encountered during construction of the Project, however, construction should be temporarily suspended in the immediate vicinity of the unanticipated discovery, to allow for further evaluation."

A copy of AECOM's report is attached as Attachment 1. Should the Ohio Power Siting Board desire further information or discussion of this submittal, please contact me at (330) 384-2740.

Sincerely,

William R. Beutler
