Subject: Proposed gas transmission line in Blue Ash case #16-253-GA-BTX

Duke Energy's proposed 30 inch natural gas transmission line through a residential area of Blue Ash, Ohio is far too dangerous and a hazard to the environment. The proposed transmission line would literally be in the backyards of dozens of residents who live on Bluewing Terrace. You can be sure that none of the people who work for Duke Energy would want a gas line like this in their backyards. I would urge the members of the Ohio Power Siting Board to reject this proposed transmission route and force Duke to look for an alternate route that does not pose a risk to homeowner's safety or the destruction of the environment.
