This comment is in regard to the proposed High Pressure Gas pipeline and the three proposed routes for the pipeline. Case 16-0253-GA-BTX. -My wife and I are very concerned about this project. First the safety aspect. Similar lines have failed with catastrophic consequences causing loss of life, severe injuries, destruction of property and millions of dollars in repairs and litigation. Will Duke bear this responsibility alone or will the State of Ohio bear this burden as well. I hope if this project goes through that there will be no serious issues. In a way that is part of my point. With the high pressures and large volume there will be no small issues. Every problem has the distinct potential to be devastating. The fact that no matter which proposed route is implemented a large number of people will be at risk. I have seen from personal experience how a utility company can cut corners and do only the basic job, not necessarily the complete and proper job. And I am concerned that visible, high profile areas will be put back to a presentable appearance while properties off the main thoroughfares may only receive cursory attention. I ask that another way be found to address whatever need prompted this proposal.
