Cincinnati, OH 45212

I write in regard to Duke Energy's proposed 30" diameter high-pressure transmission pipeline. The 3 proposed routes all traverse heavily populated areas of greater Cincinnati. The presumed cost-savings of such routing CANNOT justify the potential risk to large numbers of people should a leak/explosion occur. These proposed routes go near hospitals, schools, churches and temples, in addition to the homes of so many people.

Please work to have Duke look at alternative routes that don't involve such densely populated areas. Thanks for your consideration of these important issues.

Louis Schroder
