COMMENT DESCRIPTION:

I am writing this to express my objection to the Duke Energy's Central Corridor Pipeline Extension Project that might directly affect my house (green route) and definitely affect other thousands people in the city. I object this project because it will be very disruptive to our peaceful life and beautiful landscape in my neighborhood, cause devaluation of my house, not to mention the inconvenience during construction and the danger involving the high pressured massive size gas pipe that would make me nervous 24/7. When I have these concerns, I cannot imagine giving these worries to other people even if Duke energy chose to go with any other route, so I object this project all together. I think this is a very greedy part of Duke energy not thinking of other peoples living conditions, and wonder if they

would be okay if this type of gas pipe is going through their own homes affecting their families and friends!!! I went to a meetings that was held by Duke energy with a lot of questions. No one was giving me definite answers to any of my questions, and no one seems to know anything except for the material that had been chosen. This made me even more nervous. Also, they said this line was for supplying city of Cincinnati. When I said that we have been getting gas supply just fine for decades and why do we need additional massive pipe line like this on top of what we already have, one of the employees said that it was because Cincinnati is growing. I had a hard time understanding this answer because Cincinnati is not a fast growing city, especially in the area they are thinking of putting these lines. Cincinnati is expanding, and population might be growing because of these expansions. It would be more understandable if they are expanding pipe line to these new areas but not adding massive size pipe line in addition to existing pipe line where communities has been established. It makes me feel that this project is definitely targeting something else and we are being fooled. I demand Duke Energy to take this high pressured gas line out to rural area and leave us safe and peaceful when we are paying them for their gas. Duke energy should have a moral not to jeopardize their customers' safety and quality of life for their profit but preserve those important things for their customers.
