*■ We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. We have developed and performed the all appropriate inquiry in general conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

The Mannik & Smith Group, Inc. (MSG) was retained by Clean Energy Future-Oregon, LLC to complete a Phase I Environmental Site Assessment (ESA) of the northern 15-acre portions of two contiguous parcels addressed as 4555 Corduroy Road (parcel 44-11051) and 4655 Corduroy Road (parcel 44-10281) located in Oregon, Lucas County, Ohio (hereinafter collectively referred to as the Site). This Phase I ESA was completed in general conformance with the scope and limitations of the ASTM International Standard Practice E1527-13 "Environmental Site Assessments: Phase I Environmental Site Assessment Process," which incorporates the federal All Appropriate Inquiries rule requirements codified in 40 CFR Part 312 of the Federal Register. The goal of the process established by this practice is to identify recognized environmental conditions (RECs), historical RECs (HRECs), conditional RECs (CRECs) and *de minimis* conditions as defined within Standard Practice E1527-13. Additionally, per the Client's request, MSG also completed a preliminary wetlands determination of the Site and an evaluation for the presence of habitats preferred by state or federally threatened or endangered species.

The Site is collectively comprised of 30 acres of undeveloped, vacant agricultural land located north of Corduroy Road and east of Parkway Road, both of which provide access to the Site. There are no structures located at the Site.

According to our review of aerial photographs, the Site has been used as an agricultural field since at least 1940.

MSG did not observe hazardous substances, petroleum products, or unidentified substance containers on the Site.

No evidence of underground storage tanks (USTs) was observed at the time of Site reconnaissance. Furthermore, the Site was not listed on the UST or Leaking Underground Storage Tank (LUST) databases reviewed as part of this assessment, and state files do not identify the Site as having registered USTs.

No evidence of aboveground storage tanks (ASTs) was observed at the time of Site reconnaissance.

According to an environmental database report generated for the Site and surrounding properties, a total of six database entries associated with four facilities were identified to be within the target ASTM search distances relative to the Site. Additionally, two database entries were reviewed by MSG that were non-geocoded, meaning that HIG was unable to determine specific locations for these properties. The Site was not listed on the databases searched and MSG eliminated the surrounding facilities identified on the databases from further consideration based on their lack of enforcements or violations and/or their location either down or cross-gradient relative to the Site, based on the inferred direction of groundwater movement. .

MSG did not identify any wetlands on the Site. Johlin Ditch was observed in the far northwest corner of the Site. In addition, MSG did not observe any habitats preferred by state or federally-listed threatened or endangered species. Further coordination for ecological resources is only recommended if filling or dredging activities are proposed in Johlin Ditch.

This assessment has revealed no evidence of RECs, HRECs, or CRECs in connection with the Site.

Please note that this Executive Summary is provided as a general overview to conveniently identify RECs, HRECs, and CRECs associated with the Site. It is not intended as a stand-alone document and does not contain all of the information that is presented within the body of the report. The attached Phase I ESA report should be read in its entirety to obtain a complete understanding of the information provided and to assist you with your plans for the Site.

1.0 INTRODUCTION

The Mannik & Smith Group, Inc. (MSG) was retained by Clean Energy Future-Oregon, LLC (the Client) to complete a Phase I Environmental Site Assessment (ESA) in accordance with the ASTM International Standard Practice E1527-13 "Environmental Property Assessments (ASTM E1527-13): Phase I ESA Process," which incorporates the requirements of the federal All Appropriate Inquiries (AAI) rule, as codified in 40 CFR Part 312 of the federal register. Additionally, per the Client's request, MSG included a Preliminary Wetland Determination and looked for the presence of habitats preferred by state or federally threatened or endangered species in the scope of work.

1.1 Property Location and Description

Clean Energy Future-Oregon, LLC authorized MSG to prepare this Phase I ESA report of the northern 15-acre portions of two contiguous parcels addressed as 4555 Corduroy Road (parcel 44-11051) and 4655 Corduroy Road (parcel 44-10281) located in Oregon, Lucas County, Ohio (hereinafter collectively referred to as the "Site"). The Site is collectively comprised of 30 acres of undeveloped, vacant agricultural land located north of Corduroy Road and east of Parkway Road, both of which provide access to the Site. A Site Location map is presented as Figure 1 located in Appendix A.

1.2 Purpose and Scope of Services

The purpose for completing this Phase I ESA is to identify recognized environmental conditions (RECs)¹ controlled recognized environmental conditions (CRECs)², historical recognized environmental conditions (HRECs)³, and/or *de minimis* conditions⁴, as described within ASTM E1527-13, as well as to permit the user, whom we understand to be Clean Energy Future-Oregon, LLC to satisfy the requirements necessary to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser defenses, as defined within the Small Business Liability Relief and Brownfields Revitalization Act amendments to the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). This report describes MSG's Site investigation and document review as described in MSG's proposal to Clean Energy Future-Oregon, LLC dated October 20, 2016 and authorized on October 22, 2016. Brief summaries of the qualifications of the individuals who conducted, prepared and reviewed this Phase I ESA are presented in Appendix B.

Additionally, pursuant to the Client's request, this Phase I ESA scope of work included a review of the likely presence or absence of wetland indicators and an inspection for the presence of habitats preferred by state or federally threatened or endangered species, which are considerations not included as a requirement of the basic ASTM E1527-13 standard.

¹ A REC is defined as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to a release to the environment; (2) under conditions indicative a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

² A CREC is defined as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, activity and use limitations, institutional controls or engineering controls).

³ A HREC is defined as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (e.g., property use restrictions, activity and use limitations, institutional controls or engineering controls). HRECs are generally not considered RECs.

⁴ A *de minimis* condition is defined as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. *De minimis* conditions are not RECs.

1.3 Significant Assumptions

In preparation of this report, MSG has relied upon information contained in the files of federal, state and local governmental agencies available at the time of completion of this Phase I ESA. Although there may have been some degree of overlap in the information provided by these sources, MSG did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this assessment. MSG has relied upon this information, in part, in rendering opinions regarding the Site and considers all such information received to be accurate unless contradicted by written documentation or field observations.

1.4 Limiting Conditions

General limitations for Phase I ESAs are presented in Appendix C and limitations specific to this Phase I ESA, but not considered significant data gaps are discussed below as applicable.

1.5 Deviations

Aside from a wetland determination and state or federally threatened or endangered species evaluation completed at the Client's request, no significant deviations from the ASTM E1527-13 standard scope of work were undertaken as part of this project.

1.6 Special Terms and Conditions

No special terms or conditions have been imposed upon or requested of MSG in the performance of this Phase I ESA.

1.7 User Reliance

This report is provided for the exclusive use of Clean Energy Future-Oregon, LLC, whom MSG understands is considering developing the Site.

2.0 USER-PROVIDED INFORMATION

Pursuant to the requirements of ASTM E1527-13, MSG supplied the Client with a user questionnaire that included a request for information related to the following:

2.1 Environmental Liens, Judicial Records, or Activity and Use Limitations (AULs)

No information pertaining to Environmental Liens, Judicial Records or AULs in connection with the Site was provided to MSG.

2.2 Specialized Knowledge about Environmental Conditions

MSG was not provided with any specialized knowledge about environmental conditions regarding the Site.

2.3 Commonly Known or Reasonably Ascertainable Information

MSG was not provided with any information indicating that the Site is commonly known to be impacted by environmental issues, nor was any reasonably ascertainable information provided to MSG that would suggest that the Site is so impacted.

2.4 Copies of Previous Environmental Reports

MSG was not provided with copies of any previous environmental reports for the Site.

2.5 Information Indicating that a Reduction in Site Value Exists due to the Presence of Environmental Issues

No information has been provided to MSG that the Site value has been reduced in consideration of environmental issues.

3.0 RECORDS REVIEW

3.1 Property Ownership Information

The Site is comprised of approximately 30 acres consisting of the northern 15-acre portions of two contiguous parcels (Lucas County Parcel Numbers 44-11051 and 44-10281) addressed as 4555 and 4655 Corduroy Road, Oregon, Ohio. Tables 3.1 and 3.2 present historical ownership for Parcel Nos. 44-11051 and 44-10281.

Table 3.1 Summary of Historical Ownership – Parcel No. 44-10281 (4555 Corduroy Road)

Grantor	Grantee	Date	Possible REC, HREC, or CREC?
Not provided	Edward Wilhelm Johlin	4/11/1930	No
Edward Wilhelm Johlin	Richard Johlin	3/8/1982	No
Richard Johlin	Gary A Johlin Trustee	10/19/2010	No
Gary A Johlin Trustee	Gary A Johlin et al	10/19/2010	No

Table 3.2 Summary of Historical Ownership – Parcel No. 44-11051 (4655 Corduroy Road)

Grantor	Grantee	Date	Possible REC, HREC, or CREC?
Not provided	Frederick A Johlin	4/11/1930	No
Frederick A Johlin	Richard Johlin et al	2/25/1983	No
Richard Johlin et al	Gary A Johlin Trustee et al	10/19/2010	No
Gary A Johlin Trustee et al	Gary A Johlin et al	10/19/2010	No

The recorded land ownership history was completed by an Environmental Professional, as defined by the ASTM E1527-13 standard, for the purpose of evaluating whether or not the current or previous owners of the Site suggest an environmental concern for the Site and should not be relied upon for a guaranteed determination of property ownership. Based on the information provided above, no owners have been identified that suggest a potential environmental concern for the Site. Copies of parcel information for the Site are included in Appendix D.

3.2 City Directory Review

MSG contacted Historical Information Gatherers (HIG) to review city directories in approximate five-year intervals. Neither of the Site addresses were listed within the Polk City Directories for the years provided by HIG. This is not considered a significant data gap because aerial photographs indicate that the Site has been undeveloped and used as agricultural fields since at least 1940. Copies of the city directories are included in Appendix D.

3.3 Topographic Map Review

The United States Geological Survey (USGS) 7.5-Minute topographic map for the Oregon, OH quadrangle (dated 1965, photorevised in 1980) indicates that the Site is located in a generally level area of Lucas County. The general ground surface elevation of the Site ranges from approximately 585 to 590 feet above mean sea level (msl). The topography of the area indicates that the direction of local groundwater movement is likely toward Lake Erie located approximately 1.8-miles to the northeast.

In the original map preparation dated 1965, the Site does not appear to be developed and Johlin Ditch appears to intersect the northwest corner of the Site. A rail line appears to be located along the northern border of the Site and Driftmeyer Ditch is identified approximately 0.6-mile west of the Site.

In the map photorevision dated 1980, the Site still appears to be undeveloped. A copy of the appropriate portion of the USGS map is presented as Figure 1 located in Appendix A, the Site Location Map.

MSG reviewed historical topographic maps for the Site provided by HIG. Table 3.3 summarizes the topographic maps reviewed and appropriate portions of the topographic maps are provided in Appendix E.

Table 3.3 Summary of Topographic Maps

Year	Site Features	Adjoining Property Features	Possible REC, HREC, or CREC?
1900 (15-minute quadrangle)	The Site appears to be located in an undeveloped portion of Oregon, Ohio.	Oil wells are observed on the surrounding properties.	No
1934 (7.5-minute quadrangle)	Johlin Ditch appears to intersect the northwest corner of the Site.	Driftmeyer Ditch is identified approximately 0.5-mile northwest of the Site. A transmission line is observed approximately 0.2-mile north of the Site. The Wheeling and Lake Erie rail line is identified approximately one-mile south of the Site. The Ohio Public Service electric line is observed approximately 1.25-miles south of the Site. An oil refinery is observed approximately 0.75-mile northwest of the Site.	No
1938 (7.5-minute quadrangle)	The eastern portion of the Site appears to be forested.	Homestead Yard rail yard is observed approximately 1.25-miles west of the Site.	No
1952 (7.5-minute quadrangle)	The eastern portion of the Site no longer appears to be forested.	The previously observed Wheeling and Lake Erie rail line is now identified as the New York and Chicago rail line. Oil wells are observed approximately one-mile southwest of the Site. Residential development is observed in the surrounding area.	No
1965 (7.5-minute quadrangle)	No significant changes are observed from the 1952 topographic map.	Additional transmission lines are observed north of the Site. A rail line appears to be located immediately north of the Site.	No
1980 (7.5-minute quadrangle)	No significant changes are observed from the 1965 topographic map.	The previously identified refinery appears to have expanded to the east. Commercial development is observed approximately 0.5-mile west of the Site.	No

Year	Site Features	Adjoining Property Features	Possible REC, HREC, or CREC?
2011 (7.5-minute quadrangle)	No significant changes are observed from the 1980 topographic map.	Culver Field is identified approximately one-mile east of the Site. Wolf Ditch is identified approximately 1.5-mile southeast of the Site.	No
2013 (7.5-minute quadrangle)	No significant changes are observed from the 2011 topographic map.	Parkway Road and Blue Heron PT are observed immediately west of the Site; other surrounding properties appear unchanged from the 2011 topographic map.	No

3.4 Physical Setting Sources

MSG obtained soils information for the Site vicinity from the Soil Survey of Lucas County, Ohio (United States Department of Agriculture, 1980 and 2016). Soils on the Site have been identified as belonging to the Latty-Toledo-Fulton Association, described as level to gently sloping, very poorly drained to somewhat poorly drained soils formed in clayey glacial lake sediment. Specific soil types identified include:

FuA (Fulton silty clay loam) – The Fulton silty clay loam unit consists of somewhat poorly drained, nearly level (0 to 2 percent slope) soil formed on lake plains from glaciolacustrine deposits.

Lc (Latty silty clay, till substratum) – The Latty silty clay, till substratum unit consists of very poorly drained, nearly level (0 to 1 percent slope) soil formed on till-floored lake plains and wave-worked till plains from clayey glaciolacustrine deposits over clayey till.

To (Toledo silty clay) – The Toledo silty clay unit consists of very poorly drained, nearly level (0 to 1 percent slope) soil formed on relict lakebeds from clayey glaciolacustrine deposits.

3.5 Aerial Photographs

MSG contacted HIG to provide aerial photographs for the Site. HIG was unable to provide aerial photographs in five-year increments; however, this is not anticipated to represent a significant data gap because other resources, such as historical topographic maps were available for review to alleviate gaps in historical coverage. Table 3.4 summarizes the aerial photographs reviewed and appropriate portions are provided in Appendix E.

Table 3.4 Summary of Aerial Photograph Review

Year	Site Features	Adjoining Property Features	Possible REC, HREC, or CREC?
1940	The western portion of the Site appears to be farmland and the eastern portion of the Site is wooded. Johlin Ditch appears to intersect the northwest corner of the Site.	Surrounding properties appear to be primarily farmland with some residential development along Corduroy Road. A wooded lot is observed immediately east of the Site. An apparent orchard is located approximately 0.2-mile northwest of the Site.	No

Year	Site Features	Adjoining Property Features	Possible REC, HREC, or CREC?
1957	The wooded area in the eastern portion of the Site has been cleared and the entire Site now appears to be farmland.	An orchard appears to be located immediately southeast of the Site. A railroad is observed immediately north of the Site. Transmission lines are observed approximately 0.2-mile north of the Site. Additional residential development has occurred south of the Site along Corduroy Road.	No
1963	No significant changes from the 1957 aerial photograph are observed.	No significant changes from the 1957 aerial photograph are observed.	No
1972	No significant changes from the 1963 aerial photograph are observed.	No significant changes from the 1963 aerial photograph are observed.	No
1983	No significant changes from the 1972 aerial photograph are observed.	No significant changes from the 1972 aerial photograph are observed.	No
1987	No significant changes from the 1983 aerial photograph are observed.	Additional residential development has occurred north and south of the Site.	No
1993	No significant changes from the 1987 aerial photograph are observed.	No significant changes from the 1987 aerial photograph are observed.	No
2000	No significant changes from the 1993 aerial photograph are observed.	Additional residential development has occurred west and south of the Site.	No
2004	No significant changes from the 2000 aerial photograph are observed.	No significant changes from the 2000 aerial photograph are observed.	No
2009	No significant changes from the 2004 aerial photograph are observed.	Commercial development has occurred west of the Site.	No
2015	No significant changes from the 2009 aerial photograph are observed.	Industrial development (Oregon Clean Energy Center) is observed immediately north of the Site.	No

3.6 Plat Map

MSG reviewed the Plat Map for the west part of Oregon Township (dated 1875). The Site appears to be owned by F. Suydam, a private individual.

A copy of the applicable portion of the plat map is included in Appendix E.

3.7 Sanborn Maps

MSG contacted HIG to order Sanborn Fire Insurance Maps that cover the Site and adjoining properties. HIG responded that no coverage of the Site is available. A copy of the No Coverage letter is included in Appendix E.

3.8 Federal and State Database Search

MSG subcontracted with HIG to review federal and state databases specified in the current ASTM standard. HIG has verified to MSG that the information they have provided complies with the ASTM standard in that the information has been updated within the last 90 days or within 90 days of the date the governmental

agency makes the information available to the public. A copy of the database report is presented in Appendix F. The following ASTM-specified federal and state databases were reviewed:

Federal

- National Priorities List (NPL);
- Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS Active);
- Resource Conservation and Recovery Information System (RCRIS);
- Resource Conservation and Recovery Information System - Treatment, Storage, and Disposal Facilities, (RCRA - TSD);
- Resource Conservation and Recovery Information System - Corrective Action Sites (RCRA - COR);
- Resource Conservation and Recovery Information System - Large and Small Quantity Generators (RCRA GEN);
- Resource Conservation and Recovery Information System - Sites No Longer Regulated (RCRA NLR);
- Emergency Response Notification System (ERNS);

State

- Ohio Hazardous Site Inventory (State Sites List);
- Ohio Solid Waste Facilities (SWF);
- Ohio Leaking Underground Storage Tanks (LUST);
- Ohio Underground Storage Tanks (UST); and
- Ohio Spills List (SPILLS).

3.8.1 Database Results Summary

A total of six database entries associated with four facilities were identified to be within the target ASTM search distances relative to the Site. Additionally, two database entries were reviewed by MSG that were non-geocoded, meaning that HIG was unable to determine specific locations for the properties. Additional information regarding the identified facilities follows.

3.8.2 Site-Specific Results

The Site was not listed on the databases searched.

3.8.3 Surrounding Properties Summary

The four identified surrounding properties were eliminated from further consideration based on their lack of enforcements or violations and/or their locations either down or cross-gradient relative to the Site, based on the inferred direction of groundwater movement. MSG also eliminated the non-geocoded properties from further consideration by using available mapping software to determine that the properties appear to be located cross-gradient relative to the Site.

3.9 Freedom of Information Act (FOIA) Requests

MSG submitted FOIA requests to the following local or state governmental agencies for information pertaining to the Site: Oregon Water Utility, Lucas County Emergency Planning Committee, Ohio Environmental Protection Agency (Ohio EPA), and the Bureau of Underground Storage Tank Regulations (BUSTR). A summary of responses received from the agencies is provided in the following paragraphs.

On November 7, 2016, Mr. Michael Frey from the Lucas County Emergency Planning Committee responded with no records associated with the Site.

On November 14, 2016, Ms. Andrea Beard from the City of Oregon responded that the Site is not connected to the municipal sewer.

A review of the Ohio EPA and BUSTR online search engines did not indicate any environmental issues or USTs associated with the Site. Further, on November 22, 2016, Ms. Cheryl Gulley from the Ohio EPA responded with no records associated with the Site.

Copies of our correspondence with the governmental agencies are included in Appendix G.

4.0 SITE RECONNAISSANCE

MSG personnel completed a reconnaissance of the Site on October 28, 2016. Photographs taken during Site reconnaissance are presented in Appendix H. A Site Layout Map depicting Site features and adjacent property uses is presented as Figure 2 located in Appendix A.

4.1 Utilities/Services

According to the City of Oregon, the Site is not connected to the municipal sewer system. No evidence of other utilities or services was observed on the Site, which is currently and has historically been agricultural land.

4.2 Hazardous Substances, Petroleum Products and Unidentified Substance Containers

MSG did not observe hazardous substances, petroleum products, or unidentified substance containers on the Site.

4.3 Underground and Aboveground Storage Tanks (USTs and ASTs)

No evidence of current or former USTs such as fill ports, vent pipes, uniform patches in pavement, disturbed soils or ground depressions were observed on the Site.

No ASTs were observed on the Site and no evidence of ASTs having been removed from the Site was observed during the Site reconnaissance.

4.4 Polychlorinated Biphenyls (PCBs)

No potential polychlorinated biphenyl (PCB)-containing equipment was observed on the Site.

4.5 Solid Waste Disposal

The Site is currently farmland and does not generate any solid waste. Further, MSG did not observe any evidence to suggest that the Site has been used for waste disposal operations (i.e., landfilling).

4.6 Pits, Ponds, or Lagoons

No pits, ponds, or lagoons were observed during the Site reconnaissance.

4.7 Wastewater

The Site is currently being used as farmland and is not generating wastewater.

4.8 Storm Water

Storm water infiltrates the ground surface of the Site.

4.9 Stressed Vegetation

The Site is predominantly covered with agricultural vegetation. At the time of the Site reconnaissance, no evidence of staining or unseasonably stressed vegetation was observed on the Site.

4.10 Stained Soil or Pavement

The Site consists of farmland with no pavement. No stained soils were observed on the Site.

4.11 Odors

No strong, pungent, or noxious odors were noted during the Site reconnaissance.

4.12 Pools of Liquid

No pools of liquid were observed on the Site.

4.13 Wells

No evidence of dry wells, irrigation wells, injection wells, abandoned wells, or other wells were observed during the Site reconnaissance.

4.14 Septic Systems

No evidence of septic systems (i.e., clean outs) was observed during reconnaissance and none were reported by local government entities.

4.15 Other Items of Note or Conditions of Concern

No other items of note or conditions of concern were observed during the Site reconnaissance.

4.16 Current and Past Uses of Site

According to a review of aerial photographs, the Site is and has been used as an agricultural field since at least 1940.

4.17 Descriptions of Structures, Roads and Other Improvements

The Site is comprised of approximately 30 acres of farmland with no structures, roads or other improvements on the Site.

4.18 Current Uses of Adjacent Properties

To the extent that surrounding adjacent properties were visible from the Site and public rights-of-way during the Site reconnaissance, MSG observed the current land uses of adjoining properties as described in the table below.

Table 4.1 Summary of Site and Adjoining Land Use

Direction	Land Use	Possible REC, HREC, or CREC?
North	Oregon Clean Energy facility and railroad tracks	No
South	Farmland and residential land	No
East	Farmland and undeveloped land	No
West	Fresenius Medical Care, Oregon Clean Energy, retention pond	No

No indications of industrial uses or commercial establishments of potential concern such as dry cleaners, print shops, or paint supply shops, were observed on properties adjacent to the Site.

5.0 INTERVIEWS

MSG was not provided contact information for a current or previous Site owner. The inability to interview a current or previous Site owner is not considered a significant data gap as other sources of information such as aerial photographs and topographic maps have a clear indication of past Site uses. Summaries of correspondence with the local and state officials/agencies are included in Section 3.9.

6.0 SURFACE WATER DETERMINATION

At the Client's request, MSG completed a surface water determination on the Site on October 28, 2016 to determine if areas that could be considered jurisdictional wetlands or surface waters of the state were present. MSG also looked for the presence of habitats preferred by state or federally threatened or endangered species.

Prior to completing the field activities, MSG reviewed publicly available resources on the Site to better focus field activities. Resources reviewed were the Lucas County Soil Survey Map, National Wetland Inventory (NWI) Map and recent aerial photography. The soils survey revealed the presence of three soil types on the Site: Fulton silty clay loam, 0 to 2 percent slopes (FuA); Latty silty clay, till substratum, 0 to 1 percent slopes (Lc) and Toledo silty clay, 0 to 1 percent slopes (To). All soils are listed as hydric soil units or as having hydric soil inclusions in Lucas County. A review of NWI maps did not indicate the presence of any mapped wetlands on the Site. A review of recent aerial photography indicated that the area consists of active agricultural land. The NWI/Soils Classification map is included in Appendix A as Figure 3.

During the October 28, 2016 field investigation, MSG confirmed that the Site consisted of active agricultural fields (Photos 2, 4 and 6). Soybeans appeared to have been recently harvested from the fields. Green foxtail (*Setaria viridis*: UPL) was observed occasionally throughout the Site and Johlin Ditch was observed in the far northwest corner of the Site. MSG did not identify any wetlands on the Site. In addition, MSG did not observe any habitats preferred by state or federally-listed threatened or endangered species. Further coordination for ecological resources is only recommended if filling or dredging activities are proposed in Johlin Ditch.

7.0 EVALUATION

MSG completed a Phase I ESA in general conformance with the scope and limitations of ASTM Standard Practice E1527-13 of the northern 15-acre portions of two contiguous parcels addressed as 4555 Corduroy Road (parcel 44-11051) and 4655 Corduroy Road (parcel 44-10281) located in Oregon, Lucas County, Ohio. Additionally, per the Client's request, MSG completed a preliminary wetlands determination of the Site and an evaluation for the presence of habitats preferred by state or federally threatened or endangered species.

The Site is collectively comprised of 30 acres of undeveloped, vacant agricultural land located north of Corduroy Road and east of Parkway Road, both of which provide access to the Site. There are no structures located at the Site.

According to our review of aerial photographs, the Site has been used as an agricultural field since at least 1940.

MSG did not observe hazardous substances, petroleum products, or unidentified substance containers on the Site.

No evidence of USTs was observed at the time of Site reconnaissance. Furthermore, the Site was not listed on the UST or LUST databases reviewed as part of this assessment, and state files do not identify the Site as having registered USTs.

No evidence of ASTs was observed at the time of Site reconnaissance.

According to an environmental database report generated for the Site and surrounding properties, a total of six database entries associated with four facilities were identified to be within the target ASTM search distances relative to the Site. Additionally, two database entries were reviewed by MSG that were non-geocoded, meaning that HIG was unable to determine specific locations for these properties. The Site was not listed on the databases searched and MSG eliminated the surrounding facilities identified on the databases from further consideration based on their lack of enforcements or violations and/or their location either down or cross-gradient relative to the Site, based on the inferred direction of groundwater movement. .

MSG did not identify any wetlands on the Site. Johlin Ditch was observed in the far northwest corner of the Site. In addition, MSG did not observe any habitats preferred by state or federally-listed threatened or endangered species. Further coordination for ecological resources is only recommended if filling or dredging activities are proposed in Johlin Ditch.

This assessment has revealed no evidence of RECs, HRECs, or CRECs in connection with the Site.

APPENDIX B

RESUMES OF KEY PERSONNEL

Katie L. Simon

Professional Background

Ms. Simon is a member of the geoenvironmental team at The Mannik & Smith Group, Inc. and has assisted with the completion of various aspects of surface water delineations and Clean Water Act permitting. In addition, she has completed groundwater sampling, and Phase I and Phase II environmental site assessments.

Specializations

Environmental Site Assessments

Responsible for assisting with Phase I environmental site assessments (ESAs) including asbestos inspections, field data collection, client contact, historical property research, data management, digital illustrations and report generation. Also responsible for Phase II ESAs including field preparation, contacting various utility companies, field data collection and analysis, management of filed activities with subcontractors, data management, reporting and maintenance of client relationships.

Surface Water Delineation & Ecological Surveys

Responsible for assisting with surface water delineations, determinations and functional assessments. Delineations include surveying and mapping of wetland boundaries using global positioning system (GPS) and constructing soil plots.

Specializations

- Surface Water Delineation & Ecological Surveys
- Environmental Site Assessments

Education:

- BS Environment & Natural Resources, Ohio State University, 2011

Certifications/Affiliations:

- USACE 40-Hour Wetland Delineators Certification Program
- MBI Identification of Common Wetland Plants Course
- ODOT Ecological Surveys Training
- ODOT Waterway Permits Training
- OEPA Soil Classification, Description and Logging for Environmental Professionals Training
- OSHA 40-hr HAZWOPER Training
- Adult and Pediatric First Aid/CPR/AED, American Red Cross, 2015
- Ohio Rapid Assessment Method for Wetlands v5.0, Ohio EPA, 2015

Years of Experience:

With MSG: 2013 – Present

Other Firms: 2010 – 2013

Experience

ECOLOGICAL SURVEYS

- **Ecological Survey for 22-mile Pipeline Project – Northwest, Ohio**

Ms. Simon performed wetland delineation and assessment, stream habitat assessments and threatened and endangered species habitat evaluations along a corridor for a 22-mile pipeline project through Lucas and Wood Counties, Ohio.

- **Ecological Survey for Transportation Projects – Ohio**

Ms. Simon completed Level 1 and Level 2 Ecological Survey Reports for road improvement, roadway corridors and bridge replacement projects throughout Ohio. Activities included a literature review, analysis of aquatic habitat, vegetative community evaluations, wetland delineation, wildlife observations and terrestrial and aquatic surveys. The Ecological Surveys were completed in accordance with ODOT's Ecological Guidelines Manual dated February 2000 (revised February 2010).

SURFACE WATER DELINEATIONS, ASSESSMENTS, AND MITIGATION

- **Surface Water Delineations – Ohio & Michigan**

Ms. Simon completed numerous surface water and wetland delineations for utility companies, residential and commercial developers, cities, municipalities and private landowners. The delineations were performed throughout Ohio and Michigan, and were completed using the *Regional Supplement to the Corps of Engineers 1987 Wetland Delineation Manual: Midwest Region (August 2010)* and *Regional Supplement to the Corps of Engineers 1987 Wetland Delineation Manual: Northcentral and Northeast Region (December 2012)*. Many of these projects included the submittal of Section 404 Permits and 401 Water Quality Certifications, negotiations with regulatory agencies, qualitative assessments, threatened & endangered habitat evaluations and wetland mitigation.

Matthew S. Pesci CPG

Professional Background

Mr. Pesci is a Certified Professional Geologist (CPG) in accordance with the American Institute of Professional Geologists and maintains a registration in Michigan as a Certified Underground Storage Tank Professional. As Project Manager, he has been responsible for the completion of a wide variety of projects including ODOT-compliant Environmental Site Assessment (ESA) Screening, Phase I, and Phase II Investigations; Phase II ESAs; underground storage tank (UST) site investigations and closure assessments; wetland restorations; and ASTM-compliant Phase I Investigations. He has extensive experience planning, coordinating, and completing environmental site investigations and remediation at petroleum release sites, brownfield redevelopment sites, and Superfund sites. Mr. Pesci also spent more than five years working in support of a long-term legacy oilfield remediation project, serving as the Deputy Project Manager and a technical director for two of those years.

Specializations

Environmental Site Investigations

Project manager, task manager, and/or field team leader for the environmental investigation and remediation phases at hundreds of sites including:

- Phase I and Phase II ESAs at suspected release sites;
- ODOT compliant ESA Screenings, Phase I and Phase II ESAs along transportation improvement areas; and,
- Petroleum bulk terminals, Superfund sites, and brownfield redevelopment sites.

Comprehensive understanding of ASTM Standards and ODOT ESA guidelines.

Underground Storage Tanks

Managed or supervised numerous UST closure projects, associated site investigations, and remediation at petroleum impacted sites. Well versed in Bureau of Underground Storage Tank Regulations (BUSTR) rules, guidance, and risk assessment procedures. Primary investigator or project manager for several UST closures that received No Further Action (NFA) status from BUSTR.

Brownfield Redevelopment

Comprehensive understanding of Ohio Environmental Protection Agency (EPA) Voluntary Action Program (VAP) regulations. Assisted with the completion of VAP-compliant investigations, clean up, and preparation of No Further Action (NFA) letter documentation for four VAP project sites that have received a Covenant Not-to-Sue (CNS) from the Ohio EPA. Managed numerous Phase I and II ESAs and remedial planning activities at brownfield sites targeted for revitalization in northwest Ohio.

Specializations

- Environmental Site Investigations
- Underground Storage Tanks
- Brownfield Redevelopment
- Oilfield Remediation

Education:

- MS Geology, Bowling Green State University
- BS Environmental Science, Bowling Green State University

Certifications / Affiliations:

- Certified Professional Geologist (CPG), American Institute of Professional Geologists - Ohio, (No. CPG-11163)
- Michigan Certified Underground Storage Tank Professional, No. 1064
- 40-Hour OSHA HAZWOPER and Annual 8-hour refresher
- 10-Hour OSHA Construction Site Safety
- 8-Hour OSHA Site Supervisor
- ASTM Risk-Based Corrective Action (RBCA) at Petroleum Release Sites
- ODOT Soil and Rock Classification

Years of Experience:

With MSG: 2013 – Present
Other Firms: 2000 – 2013

Oilfield Remediation

Deputy project manager, technical director, and regulatory and quality compliance officer for a long-term legacy oil field remediation project that included three main consultant/contractors and ten-plus subcontractors. Responsible for technical and peer review of all project deliverables and for project compliance with all applicable permitted activities, regulatory guidelines, and client requirements.

Experience**ENVIRONMENTAL SITE INVESTIGATIONS**

- **ODOT Compliant ESA Screenings, Phase I ESAs, and Phase II ESAs – Toledo, Napoleon, Norwalk, Waterville, and Defiance, Ohio**

Managed and/or served as primary investigator for ODOT Compliant ESA Screenings, Phase I ESAs, and/or Phase II ESAs for over 20 transportation improvement project areas.

- **Energy Development Projects – Oregon and Lordstown, Ohio**

Successfully managed multi-disciplinary efforts to assist our clients with the development of the \$800M Oregon Clean Energy and \$890M Lordstown Clean Energy Center natural gas-fired power plant sites. Projects included Phase I and II ESAs; hydrogeological investigations; ecological assessments, delineations, and permitting; geotechnical investigations; asbestos surveys; and ALTA/ACSM, boundary, and topographic surveying services.

- **Former ACH Sandusky Plant Ohio VAP Project – Sandusky, Ohio**

Task manager and lead investigator for a detailed hydrogeological investigation completed at a 356-acre manufacturing facility to ensure that the underlying bedrock aquifer and off-Property locations were protected. The study demonstrated that shallow impacted groundwater would not migrate to off-Property locations and would not be drawn deeper into the aquifer. Also assisted in the preparation of the No Further Action (NFA) letter documentation submitted to the Ohio EPA in support of a CNS request for the Property.

- **ExxonMobil - Bulk Terminal and Pipeline Sites - Michigan and Illinois**

Field responsibilities included health and safety planning, contractor coordination, site investigations, supervision of drilling operations, soil and groundwater sampling activities, and preparation of technical reports for active and former bulk terminal facilities and pipeline release sites. (previous employment)

- **Bofors-Nobel Superfund Site - Muskegon, Michigan**

Project involved investigations and oversight of remedial actions at Superfund site. Field responsibilities included health and safety planning, contractor coordination, supervising drilling operations during site investigations, soil sampling, and leading field teams during quarterly low-flow groundwater sampling events. Also, responsible for maintaining strict quality control of sampling procedures and collecting field data to meet federal and state regulatory agencies' requirements. In addition, provided contractor oversight during remedial wetlands construction. (previous employment)

- **Wolverine Pipeline Company, Jackson Meter Station - Jackson, Michigan**

Project involved numerous site investigations, surface water sampling, groundwater sampling, and remedial actions in response to a large petroleum release from the Jackson meter station. Field responsibilities included health and safety planning, contractor coordination and oversight, site investigations, supervision of drilling operations, soil sampling, and performing low-flow groundwater sampling. Also supervised and coordinated the decommissioning of more than 400 residential drinking water wells down gradient from the release site. (previous employment)

- **River Rouge Terminal, Buckeye Pipeline – River Rouge, Michigan**
Project involved performing operations and maintenance (O&M) on a water treatment system that treated all surface water discharged from the terminal site. Also, performed O&M on a separate groundwater recovery and treatment system that was set up to recover light non-aqueous phase liquids (LNAPL) and impacted groundwater from a release that occurred between the terminal's load rack and bordering Marion Avenue. (previous employment)
- **I-465 West Leg Reconstruction, Indiana Department of Transportation - Indianapolis, Indiana**
Primary investigator for Phase II ESAs at several sites as part of the Indiana Department of Transportation, Accelerate 465 project. Specific duties included contractor coordination, supervising drilling operations, and completing soil and groundwater sampling activities. (previous employment)
- **Retail Sites, ExxonMobil - Chicago, Illinois**
Served as field team leader during Phase II ESAs at 28 active gasoline station retail sites in the Chicago area. Specific duties included health and safety planning, contractor coordination, supervision of drilling operations, and completing soil and groundwater sampling activities. (previous employment)

UNDERGROUND STORAGE TANKS

- **Ohio Retail Portfolio, BP Products North America – Ohio**
Projects included environmental site assessments and implementation of remedial actions at numerous active and former retail facilities and petroleum bulk terminal facilities throughout Ohio. Field responsibilities included health and safety planning, contractor coordination and oversight, site investigations, supervision of drilling operations, soil and groundwater sampling activities, UST closures, and preparation of BUSTR Tier 1, Tier 2, and Closure Assessment reports. Also responsible for performing operations and maintenance on groundwater treatment systems, participating in development of efficient and cost-effective remediation options, and implementing and adhering to BP's health, safety, security, and environment and control of work programs at all sites. (previous employment)
- **Retail and Terminal Sites, Marathon Petroleum Company - Ohio, Michigan, and Indiana**
Field responsibilities included health and safety planning, contractor coordination, site investigations, supervising drilling operations, soil and groundwater sampling activities, and UST closures. Prepared interpretive reports for active and former retail facilities and petroleum bulk terminal facilities. (previous employment)

BROWNFIELD REDEVELOPMENT

- **UpTown Green Signature Park Ohio VAP Project – City of Toledo, Ohio**
Worked closely with the City of Toledo to revitalize a 2.5-acre former commercial and industrial brownfield property in Toledo's UpTown Neighborhood into a community park with sustainable storm water management features and a neighborhood fresh food market. Completed environmental assessments in accordance with Ohio's VAP and served as lead author in the preparation of the No Further Action (NFA) letter documentation that resulted in a CNS from the Ohio EPA.
- **Former Sandusky Cabinets Ohio VAP Project – City of Sandusky, Ohio**
Worked closely with the City of Sandusky to revitalize a 1.7-acre former industrial brownfield property just two blocks from Sandusky Bay into a rejuvenated corner property suitable for the mixed commercial-residential use that the community envisioned. Completed environmental assessments and site remediation in accordance with Ohio's VAP and served as lead author in the preparation of the No Further Action (NFA) letter documentation that resulted in a CNS from the Ohio EPA.

- **U.S. EPA Community-Wide Assessment Projects – Lucas County, Ohio**

Project manager, task manager and/or lead investigator for grant funded assessments at several strategic brownfield sites targeted for redevelopment in the Toledo area on behalf of the City of Toledo and its coalition grant partners (Toledo-Lucas County Port Authority, Lucas County Land Reutilization Corporation, and Metropolitan Park District of the Toledo Area). Projects have included Phase I and II ESAs; asbestos inspections; universal waste surveys; remedial action plans; preparation of asbestos abatement and building demolition specifications; and brownfield site inventories.

OILFIELD REMEDIATION

- **Mid-Michigan Oilfield Remediation, Chevron Environmental Management Company - Porter Township, Michigan**

Project involved assessment and remediation of over 600 legacy oilfield sites in mid-Michigan, including the bioremediation of impacted soils at a centralized landfarm site and locating and re-plugging improperly abandoned oil wells. Served as deputy project manager and a technical director/compliance officer for two years on the project by developing, editing and/or maintaining the Field, Sampling, and Analysis Plan (FSAP), Standard Operating Procedures (SOPs), Quality Assurance Project Plan (QAPP), and Project Management Plan for the project and ensuring the project was compliant with all applicable permitted activities, regulatory guidelines, and client requirements. Also, responsible for providing technical and peer review on all project deliverables. Field responsibilities included task management, leading field teams performing site investigations of potentially impacted sites, supervising well re-plugging and abandonment activities, performing health and safety officer duties, and mentoring/training new project staff. In addition, served as task manager for a residential drinking water chloride contamination investigation. Specific duties associated with this task included work plan preparation, supervising drilling operations, collecting soil and groundwater samples, and preparing remedial investigation reports for CEMC and the MDEQ. (previous employment)

Michael J. Momen CP

Professional Background

Mr. Momen is an experienced project manager in addition to being an Ohio Voluntary Action Program (VAP) Certified Professional (CP), and a Certified Underground Storage Tank Professional in both Ohio and Michigan. With greater than 30 years professional experience, he has responsibly implemented the assessment of hazardous materials and petroleum constituents at more than 1,000 sites for both public and private sector clients. As a project manager, he has routinely proven himself capable of effectively coordinating multi-disciplinary teams of coworkers and subconsultants to deliver projects on-time and within budget. Mr. Momen maintains intimate knowledge of numerous regulatory programs and understands how to effectively deal with environmental issues constraining brownfield redevelopment and transportation improvement projects. Relevant capabilities include: remedial action plan design; contractor negotiations; developing project-specific data quality objectives; the design of environmental work plans; data evaluation; environmental site assessment and report preparation; and public planning and involvement.

Specializations

Brownfield Redevelopment

Mr. Momen has prepared numerous No Further Action (NFA) Letters for brownfield properties including: operating and former automotive manufacturing facilities; refineries; dry cleaners; underground storage tank sites; and unpermitted landfills. He has successfully secured nine Covenants-Not-to-Sue (CNSs) from the State of Ohio - including the largest single property yet taken through the Ohio VAP - and has also secured Releases on Liability (ROLs) from the Pennsylvania Department of Environmental Protection for a former gasoline station and a former dry cleaner. He provided input to the committee charged with formulating Ohio's original VAP rules (OAC Rule 3745-300) and has served on several multi-disciplinary boards and committees responsible for ensuring that the Ohio VAP rules remain relevant. Throughout and post-redevelopment, Mr. Momen continues to assist clients meet their continuing environmental obligations in order to maintain CNS compliance.

Environmental Site Investigations

Mr. Momen has successfully managed RCRA Facility Investigations (RFIs) at operating hazardous waste treatment, storage and disposal facilities under both federal and state leads. He served first as the lead field investigator and ultimately became the project manager for the remedial investigation/feasibility study (RI/FS) of a former 104-acre landfill located within a shallow sand aquifer and proximate to a suburban residential neighborhood. He has worked with developers and their legal counsels to evaluate liabilities associated with real estate transactions, and has successfully managed several high-profile demolition projects.

Groundwater Monitoring Programs

Mr. Momen has managed numerous landfill groundwater monitoring programs, including a facility with 119 compliance-monitoring wells screened

Specializations

- Brownfield Redevelopment
- Environmental Site Investigations
- Groundwater Monitoring Programs
- Underground Storage Tank Management & Compliance

Education:

- BA Geology, University of Toledo, 1984

Certifications / Affiliations:

- Ohio Voluntary Action Program Certified Professional, # 236
- Ohio Underground Storage Tank Installer Certification, # 63-87-0006
- Michigan Certified Underground Storage Tank Professional, #304
- ODOT Prequalified - ESA Screening, Phase I ESA & Phase II ESA
- ODOT Prequalified - ESA Remedial Design
- Certified OSHA 40-hour Hazardous Waste Training
- Qualified Ground Water Scientist in Accordance with OAC Regulations

Years of Experience:

With MSG: 1988 – Present
Other Firms: 1984 – 1988

across three isolated hydrogeologic formations. Mike was responsible for technical execution of the groundwater monitoring program; coordinating permit review and relevant permit modifications; interpretation of analytical data; reporting; and interaction with regulatory agency personnel. He also successfully negotiated the reclassification of a closed residual waste landfill, resulting in early termination of post-closure groundwater monitoring and more than \$100,000 worth of savings to the client.

Underground Storage Tank Management & Compliance

Mr. Momenee has personally overseen the closure of more than 300 underground storage tank (UST) systems and completed Tier 1 and 2 evaluations to applicable regulatory agency standards securing NFA status for the majority of these tanks. He has provided clients with recommendations to bring their UST populations into compliance with both state and federal standards, and has also prepared UST management plans for clients in order to bring tank populations into compliance and limit overall liability.

n for a population of more than 100 tank systems.

Relevant Project Experience

Overland Industrial Park; Toledo-Lucas County Port Authority – Toledo, Ohio

Birthplace of the iconic Jeep brand sport-utility vehicle, Mr. Momenee has managed this project from concept through property redevelopment. Requiring with the coordination of numerous state and federal agencies, several months of environmental due diligence investigation work was successfully completed within six weeks to meet the constraints of the Port Authority and US Treasury Department in order to facilitate the transfer of this 111- acre property out of bankruptcy. The Ohio Department of Transportation (ODOT) was contacted to evaluate the potential to provide a direct connection from Interstate 75 (I-75) to the property, and two successful Clean Ohio Fund grant applications were prepared garnering \$4.5 million for the project. Environmental issues at the property including the remediation of two areas of chlorinated organic solvents; three orphaned USTs; lead-contaminated soils; and an area of free-phase petroleum hydrocarbons in the subsurface were all successfully addressed. Where practicable, mildly contaminated soils were reincorporated into the property below the point of compliance; thereby providing a sustainable, cost-effective beneficial reuse. More than 300,000 cubic yards of remnant concrete foundations, slabs and footings were excavated, crushed and also beneficially reused within the property limits to facilitate redevelopment. Sustainable storm water management practices have been incorporated into the industrial park's design, including the creation of fish-spawning habitat, wetlands, and increased flood capacity along the Ottawa River, which will provide public accessibility to this urban waterfront. The property has been determined to meet applicable commercial/industrial land use standards in accordance with the Ohio VAP and the industrial park has received a CNS from the state.

Former Automotive Parts Manufacturing Plant; Ford Motor Company – Sandusky, Ohio

Originally developed in the mid-1950s by the Ford Motor Company (Ford), the property consists of more than 1,000,000 square feet of manufacturing space under roof on more than 350 acres of land. Ford entered into Findings and Orders (F&O) with the Director of the Ohio EPA in the early 1990s and completed cleanup of multiple waste disposal units including: several on-site paint waste disposal areas; two sludge ponds; and one oil pond. One unpermitted and unlicensed solid waste disposal area remained on the property within the limits of a former stone quarry. Ford had an interested prospective purchaser for the property, but the existing F&O proved to be detrimental to completing the transaction.

Mr. Momenee worked with Ford, the Ohio EPA and the interested purchaser's consultant to derive a work plan that addressed all outstanding environmental issues at the property, and negotiated for the termination of the F&O to remove a VAP-eligibility hurdle. Mike managed the environmental assessment; excavation, regulatory-compliant disposal and clean closure of the unpermitted solid waste landfill; the removal and disposal of sediments from an on-site process ditch not meeting applicable standards; the risk assessment; completion of the VAP NFA documents; and successfully addressed all Ohio EPA comments in order to secure the CNS for the property and close-out all remaining RCRA issues. To date, this site is the largest single property taken through the Ohio VAP.

King Road Landfill Remedial Investigation/Feasibility Study (RI/FS; Lucas County Sanitary Engineer – Sylvania Township, Ohio

Findings and Orders (F&O) were issued to the Lucas County Board of Commissioners by the Director of the Ohio EPA and the Ohio Attorney General in the late 1980s resulting from the unpermitted discharge of leachate to waters of the state. Mr. Momenee prepared and implemented a comprehensive hydrogeologic investigation of this 104-acre landfill situated on the fringes of the ecologically sensitive Oak Openings region of Northwest Ohio. Remedial approaches implemented at the facility include: the installation of passive vents to discharge methane to the atmosphere before it can migrate into nearby buildings; the installation of a wet well and force-main interceptor sewer to convey leachate to the county's waste water treatment plant; implementation of a "No Well Zone" surrounding the property to eliminate potential exposures from persons using groundwater for potable purposes; and installation of an alternative phyto-technological cover system using native trees and plants to help control groundwater flow and aid in the evapotranspiration of contaminants from the unconfined aquifer. A second set of F&O were issued in 2016 requiring the county to maintain and implement remedial actions for the landfill and Mike is managing the post-closure monitoring requirements, and has worked to facilitate the extension of a multi-use trail through a portion of the landfill property.

Former Hotel Seagate; Lucas County Economic Development Corporation – Toledo, Ohio

Laden with asbestos, this underutilized property consists of a 19-story reinforced concrete structure on 0.4-acre of prime downtown Toledo real estate. Originally constructed as a multi-story hotel circa 1970, the building had become functionally obsolete and the county acquired the property in order to secure it from vandals and other trespassers. Mr. Momenee managed the asbestos inspection of the property and the preparation of bid specifications for the abatement and demolition of the structure. He provided review of contractor bids, a recommendation for contractor selection to the owner, contractor performance oversight, review of contractor requests for payment, and is working with redevelopers of the property.

Lake Erie Port Industrial & Manufacturing Center, Ironville Terminal; Midwest Terminals of Toledo International - Toledo, Ohio

The location of the former Chevron Toledo refinery in operation from the 1880s through the mid-1990s, Mr. Momenee serves as the Project Manager ensuring environmental compliance associated with the industrial redevelopment of this brownfield site providing his professional environmental expertise to both the Toledo-Lucas County Port Authority and Midwest Terminals of Toledo International. Continuing obligations at the property included the operation of a groundwater pump and treat system to address legacy hazardous constituents in groundwater. Mr. Momenee successfully demonstrated that groundwater had been remediated to applicable standards and worked with the Ohio EPA and associated legal counsels to eliminate the obligation to treat groundwater and modify existing environmental covenants to remove obsolete language and environmental limitations that were no longer applicable.

APPENDIX C

LIMITATIONS OF PHASE I ESAS

LIMITATIONS OF PHASE I ESAs

The Mannik & Smith Group, Inc. (MSG) completed the evaluations and opinions presented in the preceding report in general accordance with the methodologies and protocols set forth in the ASTM International Standard Practice E 1527-13. This Phase I ESA report been prepared to assist our Client with making a reasonable assessment of recognized environmental conditions (RECs)⁵, controlled recognized environmental conditions (CRECs)⁶, historical recognized environmental conditions (HRECs)⁷, and/or de minimis conditions⁸ associated with a property and is intended to reduce, but not necessarily eliminate, uncertainty regarding the likelihood for RECs to exist on the Site. The results of this Phase I ESA should not and cannot be construed as a certification as to the presence or absence of RECs at a property, but rather, as a diligent and prudent review of available information within an established work scope, timeframe and budget.

During the course of this property-specific assessment, various documents, data and information published and obtained from private organizations, as well as municipal, state and federal agencies have been relied upon. No independent verification or confirmation with regard to the accuracy of these documents, data and information has been made, and MSG neither warrants nor guarantees the accuracy or completeness of the information provided by these outside sources.

This Phase I ESA report is provided for the exclusive use of our client, as named within the preceding report. This client has the right to reproduce this Phase I ESA report, in whole or in part, but no other party may rely upon the contents of this report without the expressed written consent of MSG. The reliance of any and all persons, parties, entities and/or organizations is subject to MSG's Standard Terms and Conditions, unless otherwise specifically agreed to in writing. A copy of MSG's Standard Terms and Conditions can be obtained by contacting MSG.

⁵ A REC is defined as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to a release to the environment; (2) under conditions indicative a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

⁶ A CREC is defined as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, activity and use limitations, institutional controls or engineering controls).

⁷ A HREC is defined as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (e.g., property use restrictions, activity and use limitations, institutional controls or engineering controls). HRECs are generally not considered RECs.

⁸ A de minimis condition is defined as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. De minimis conditions are not RECs.

This image shows a full page of blank graph paper. The grid consists of small, equal-sized squares formed by thin black lines. There are approximately 20 columns and 25 rows of squares. The paper has a slightly off-white or cream color, and there are some very faint, scattered dark specks or dust particles visible across the surface. No text, drawings, or other markings are present on the page.
