COMMENTS: Thank you for the information that the Maximum DBA will be 46, again I would like for you to clarify if that is for 1 or 70 Wind Turbines, you stated it is just like a dishwasher. I am very, very concerned about my daughters health mentally and physically due to the wind turbines. Some of the effects such as audio, visual, view, light, shadow flicker, vibration, air turbulence, electromagnetic, ice, wind damage, tornado damage, the inability for emergency air ambulance, travel, lightning strikes, water table effects, well water effects, fire, increasing my daughters seizures, ill effect on her sensory disorder, over stimulation and last but not least will be her quality of life. I would of never moved to where we live if I knew there would be a possibility of Wind Turbines would be in a 20 mile radius. When we do travel with her I would even have to take a longer route or not go in the direction because of these turbines, it will turn our world upside down. We enjoy taking walks to observe nature and peace and a quiet, this will have to stop...this is one thing she enjoys every day. We built a therapy room that has 22 windows, she will no longer be able to use this room and therefore her therapies would come to end. There will not be any sitting outside to enjoy the outdoors, we will captive in our home, with the noise, flicker, vibration and all of the items listed above, this is no way to live. I have contacted her Neurologist and her DO (Pediatric Physical Medicine & Rehabilitation Doctor) and have appointments to talk about this in depth and do base line testing to assure nothing has changed and do another prior Wind Turbines to have accurate data.

Could you please send me any data you have on the test you have done in our area I could also give the physicians that may help them help her? Again I would like to know if the 46 DBA will be the maximum

for us? What would be the proximity be for us? What would be the flicker effect for us in each direction? Will we subject to the vibrations? Is there a plan for a life ambulance to land within a safe distance in and emergency (due to increase seizures possibility there is a strong chance she may hit her head or have her hip displaced – she also had a broken hip plate when she was severely beaten along with the shaking)? The sounds of construction – let me know the DBA that would be expected with that also along with the time frames. I know that this is a lot but I want to make you aware of our situation and how it effects our home 24 hours a day, 7 days a week, 365 days a year. Please reconsider placing any wind turbines/equipment near our home that may affect her well-being.

Thank you for your time,

Donna Lambert
7520 E Twp Rd 58
Bloomville, OH 44818
Phone: 419-680-0196

For those that do not know our situation, I have a victim of shaken baby and abuse I am raising since she was dismissed from the hospital when she was 4 months old, at the time I called Children Services to state I was concerned about her/her brothers well-being because the mother had lost custody of two other children prior to having the 2 that I now have. I should have been more vigilant and will never forgive myself for not because it resulted in her near death and now has Tetraplegic Spastic Cerebral Palsy, Microcephaly, Severe Mental Delays, Spine Disorder, Cracked hip plate, Seizure Disorders, Sensory Overload, Sensory Issues, Visual Issues, etc... She has OT, PT and Speech each week at our home and I home school her. You can see why I am very, very concerned that the Wind Turbines will affect her quality of life each and every day, I cannot stand by and let this happen, this has caused me enormous amount of stress since I received the first letter.
