Sirs,
This wind farm in Seneca Co. is a nightmare! There is no benefit to our area for lower electric bills.

To pollute our populated area with 130 turbines that are as high as the Washington Monument for a company to make a profit for 20 years, then leave these things then have to be subsidized by the government to make a profit, just to send electric to the east out of our area.

Two companies have backed out of this project already so there can't be that much profit in the project.

2

Our area will be polluted
with these turbines for
generations. The company
puts them up then leave
them after 20 years for the
farmers to tear down. You
know that will never happen!
The farmer would never have
enough money to tear them
down.

Who ever put them up
should have to remove them.

Truly

Madelyn Smith
