**Re: Republic Wind, LLC,
OPSB Case No. 17-2295-EL-BGN**

Dear Ms. McNeal:

Attached for filing in the above-referenced matter, is a copy of the revised Sound Survey by RSG, which is in response to Staff Data Request Question No. 3 (First Set).

Please do not hesitate to contact me if you have any questions.

Sincerely,

Devin D. Parram

MEMO

TO: John Arehart III, Apex Clean Energy

FROM: Isaac Old, Consultant

CC: Dalton Carr, Apex Clean Energy

DATE: August 14, 2018

SUBJECT: Republic Wind - Updated Turbine Model

The Republic Wind power facility ("Project"), is being proposed by Apex Clean Energy, in an area straddling the border between Seneca County and Sandusky County, Ohio between the towns of Republic and Bellevue. The project proposes installation of up to 58 wind turbines. A noise impact assessment for the Project was prepared by RSG (*Noise Impact Assessment for Republic Wind – Seneca and Sandusky County, Ohio*, dated December 22, 2017) describing sound level monitoring results from in and around the project area and sound propagation modeling results of proposed Project equipment ("Report"). An update of the modeling report, with updated residence locations was published in a May 7, 2018 memo titled *Republic Wind – Updated Receiver Layer*. The current memo includes updated modeling, replacing modeling of the Siemens G132 wind turbine with the Acciona AW 132 3300 wind turbine. Modeling of the Vestas V136 3.6 MW and GE 3.6-137 are also included, though the results are the same as the May 7, 2018 memo.

This memo describes updates to the sound propagation modeling and the updated results. Results are compared with the OPSB precedent sound level limit of 46 dBA L_{1h} (1-hour equivalent average sound level) at nonparticipating residences. The sound level limit is based upon a 5 dB increase above the measured site-wide background sound level. Description of background sound level measurements and derivation of the precedent sound level limit are further described in the Report.

Sound Propagation Modeling Procedures

Updated sound propagation modeling was performed with the same parameters and inputs described in the Report and May 2018 memo. The only change to modeling is the replacement of the Siemens G132 wind turbine with the Acciona AW132 3300 wind turbine. The receiver locations used are different from the December 2017 report, but are the same as the May 2018 memo.

Model was performed for 3,295 receivers (3,024 nonparticipating and 271 participating). Locations of each receiver are shown graphically in Figures 4, 5, 6, and 7 in the Appendix. A table that includes coordinates for each receiver is shown in Table 2.

The modeled wind turbine models are the GE 3.6 MW 137 with a 110 meter hub height, Acciona AW132 3300 with a 84 meter hub height, and the Vestas V136 3.6 MW with a 105 meter hub height.

Sound Propagation Modeling Results

Sound propagation modeling results are shown as sound level contour maps in Figures 1, 2, and 3. Discrete receiver results are shown in Table 2.

Results for the Vestas and GE turbines are the same as the May 2018 memo, with the highest modeled sound level at a receiver of 46 dBA. Results for the Acciona indicate that the highest sound level at a nonparticipating receiver is 46 dBA with Noise Reduced Operations (NROs) applied to some turbines. The number of Acciona turbines at each level of NRO is shown in Table 1.

TABLE 1: ACCIONA AW132 - MODELED TURBINE MODES

Acciona AW132 3300	
Operational Mode	Turbine Count
Full Sound Power	28
1 dB NRO	8
2 dB NRO	10
3 dB NRO	9
4 dB NRO	3

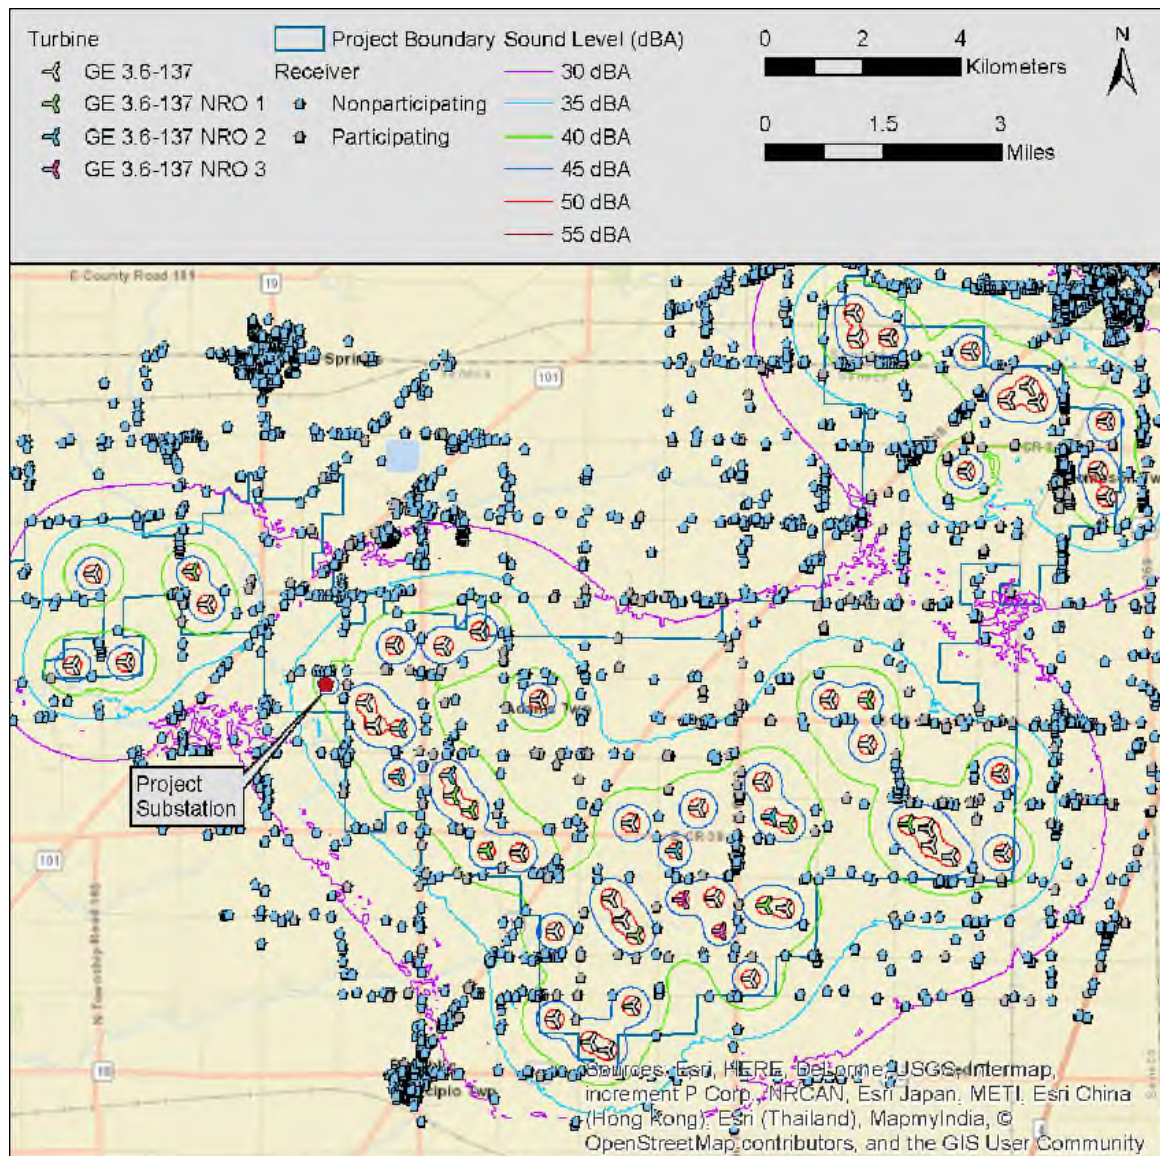

Conclusions

RSG has updated modeled for the proposed Republic Wind power facility, proposed for Seneca and Sandusky County, Ohio, to include the Acciona AW132 3300 wind turbine. All sound propagation modeling procedures and inputs are identical to those used in the December 22, 2017 report *Noise Impact Assessment for Republic Wind – Seneca and Sandusky County, Ohio* with the addition of an updated receiver locations, as is described. Modeling for the Vestas V136 3.6 MW and GE 3.6-137 are identical to the May 7, 2018 memo titled *Republic Wind – Updated Receiver Layer*.

Conclusions are as follows:

- The maximum modeled sound level at a nonparticipating receiver is 46 dBA for the GE and Vestas turbine models, with the same Noise Reduced Operations (NROs) applied that were used in the Report and May 2018 memo, indicating compliance with OPSB precedent sound level limits.

- 
- The maximum modeled sound level at a nonparticipating receiver with the Accional AW132 turbine is 46 dBA with some NROs applied, indicating compliance with OPSB precedent sound level limits.
