In March of 2018, grid operator PJM reported that FirstEnergy's plan to close three nuclear power plants by 2021 won't threaten grid reliability and stability. If the loss of 4000+ Megga Watts of power (from FirstEnergy nuclear and coal plants) won't affect grid reliability, where is the pressing need for industrial wind power? PJM claims there is sufficient and readily available power to import into the PJM system. OPSB – please explain to me why we need industrial wind generators on property zoned as Agricultural/Residential.
