BEFORE  
THE PUBLIC UTILITIES COMMISSION OF OHIO

KUBITZA, Matt,

Vs.

OHIO EDISON COMPANY

Case No. 17-1435-EL-CSS

PUCO

2019 SEP -6 PM 1:13

RECEIVED-SOCKETING DIV

Complainant's Motion to Strike Portions of Ohio Edison's Post Hearing Brief

Anything that pertains to the history of the Jackson circuit being reliable should be struck.

This is to certify that the images appearing are an accurate and complete reproduction of a case file document delivered in the regular course of business.

Technician WEN Date Processed 9/6/19

Page 1 Paragraph 2 from Moreover to He did not.

This proves nothing to the REAL history of the Alluminum lines that were buried in the 1970's

Page 1 Paragraph from Third, there to May 3<sup>rd</sup> 2017

The picture that Everyone has had since 2017 of their test meter hooked up outside my house, proves unreasonable amounts of voltage entering my home.

Page 3 Paragraph 3 "They also replaced the domelid"

This shows that their records are not always right. The Troubleshooter that first came out on May 3<sup>rd</sup> 2017 replaced it while he was there, not the guys who did the splice fix later.

Page 6 Paragraph 2 from But further to Fails

Ohio Edisons witness states if the lines were not buried correctly problems would have happened within the first few years. The history Ohio Edison goes off of is the 7 year span from the day I moved in to the day of the failure. They would not provide anything through discovery before that, so they should not speak of history when in fact, there could have been issues in the 70's, 80's, 90's or even the early 2000's.

Page 8 Paragraph 2 from His opinion to Google searches

Ohio Edison did not ask what I have done for work. My opinion is from taking a 2 year technical course in residential and industrial electricity, working at six flags as a maintenance electrician, and as a maintenance man for a retirement village for 5 years and a factory for 7+ years. My opinion doesn't strickly come from Google searches that took me to companies websites like Entergy, Prysmian, and the Georgia Tech Study.

Page 10 Paragraph 1 The history of the Jackson circuit also shows that it was (and still is) a reliable circuit.

Again, they never give the history of the circuit even though I had asked! They only give a time frame!

Page 11 Paragraph 2

Again with the History. In the 7 year tidbit of the life of the circuit, it had been on their 8% worst performing circuits. Ohio Edison did nothing to prove historically the circuit has been reliable.

Page 15 Paragraphs 2 and 3

I took the surge protectors to my deposition and showed them to them. There are damages and yes the full replacement for the refrigerator and freezer are on the list because a brown out( low voltages) reduces the life of compressors, plus other items on these appliances were affected. I

am not a lawyer, I didn't know that stuff I had giving in discovery or at dispositions were not evidence. I didn't know I would have to have an author say, yes I wrote this. I didn't know that I had to get confirmation from a company about their webpage to make it legit. This should not make these not true! There is plenty of evidence and I would hate for someone to get hurt because someone that is not a lawyer and can't afford to foot the bill for every one is trying to do the right thing. The only insurance company that should have to pay for Ohio Edison using old Aluminum lines is Ohio Edisons, not all of their customers!

Best regards,  
Matt Kubitza
