

## FINAL BRIEF

### FACTS:

Energy consumption at my residence , 4116 Parkside Drive Brooklyn oh 44144, registered higher than average amounts between October 2017-April 2018.

The house was purchased in 2015, and more occupants were in the home at that time. Energy consumption was significantly less than now with less occupants and the house empty all day long

All utilities are new and energy efficient, the house is comprised of a gas furnace and stove

Average daily temperatures were warmer in the years and months of the higher meter readings.

Electric consumption was registering more than 270 percent higher when compared to my neighbors

A new meter was installed in April 2018 and readings have returned to normal since then and correlate with the history of the usage in the home.

Summary: The evidence presented at the hearing such as copies of bills, (both gas and electric) , testimony from myself and First Energy etc will hopefully shed light on this case. A home with a square footage such as mine is incapable of handling this type of surge in electricity and the validity of the bills is to be questioned.

This is to certify that the images appearing are an accurate and complete reproduction of a case file document delivered in the regular course of business.
