Re: Emerson Creek project (18-1607-EL-BGN)

To the members of the Ohio Power Siting Board:

As you know, several companies are developing large, capital intensive projects in Huron and Erie Counties. Specifically, the Emerson Creek Wind Farm project by Firelands Wind is a project that will benefit the economies of Huron and Erie County, as well as the entire community.

While the economic benefits provided by this project would aid the growth of these communities, advancing Ohio's alternative energy usage would provide, critical, long-lasting impact for future generations of Ohioans. Promoting sustainable energy alternatives would lessen the reliance on fossil fuel imports and allow Ohio to become more energy independent.

Wind energy projects would make Ohio more attractive to technology companies looking to expand their operation. Already, major tech companies such as Google and Amazon site an alternative energy presence as a factor for selecting a new headquarters or office. As a student, the presence of these companies and the jobs they would create would cause me to consider staying in Ohio for the duration of my career.

In short, by diversifying its energy profile, Ohio would be able to compete with other states as an attractive location for future industry expansion, as well as, create sustainable energy sources for its residents. I hope the members of the Ohio Power Siting Board approve the construction of the Emerson Creek Wind Farm. I implore you to consider the needs of the next generation of Ohio's residents in your decision.

Sincerely,

Signature Blair Hassett

As a student, the presence of these companies and the jobs they would create would cause me to consider staying in Ohio for the duration of my career.

In short, by diversifying its energy profile, Ohio would be able to compete with other states as an attractive location for future industry expansion, as well as, create sustainable energy sources for its residents. I hope the members of the Ohio Power Siting Board approve the construction of the Emerson Creek Wind Farm. I implore you to consider the needs of the next generation of Ohio's residents in your decision.

Sincerely,

Signature Alexa Lawhorn

Re: Emerson Creek project (18-1607-EL-BGN)

To the members of the Ohio Power Siting Board:

As you know, several companies are developing large, capital intensive projects in Huron and Erie Counties. Specifically, the Emerson Creek Wind Farm project by Firelands Wind is a project that will benefit the economies of Huron and Erie County, as well as the entire community.

While the economic benefits provided by this project would aid the growth of these communities, advancing Ohio's alternative energy usage would provide, critical, long-lasting impact for future generations of Ohioans. Promoting sustainable energy alternatives would lessen the reliance on fossil fuel imports and allow Ohio to become more energy independent.

Wind energy projects would make Ohio more attractive to technology companies looking to expand their operation. Already, major tech companies such as Google and Amazon site an alternative energy presence as a factor for selecting a new headquarters or office. As a student, the presence of these companies and the jobs they would create would cause me to consider staying in Ohio for the duration of my career.

In short, by diversifying its energy profile, Ohio would be able to compete with other states as an attractive location for future industry expansion, as well as, create sustainable energy sources for its residents. I hope the members of the Ohio Power Siting Board approve the construction of the Emerson Creek Wind Farm. I implore you to consider the needs of the next generation of Ohio's residents in your decision.
