20.3 Trunks

Business Trunks are available to new or existing Customers who enter into a Service Order Agreement to receive service after May 17, 2002. Business Trunk Service provides customers with access to and from the Public Switched Telephone Network (PSTN) for inbound, outbound or two-way call traffic. The trunk connection can be either analog or digital depending on the customer's requirements.

Analog trunk service is offered via standalone Private Branch Exchange (PBX) or Direct Inward Dial (DID) Trunks, while digital connections are provided through Digital Switched T-1 Service.

In-Only Trunks: A One-Way trunk that only allows traffic from the XO switching equipment to be transmitted to the customer's PBX.

Out Only Trunks: A One-Way Trunk that only allows traffic originating in the customer's PBX to be transmitted to the XO switching equipment.

Two-Way Trunks: A Trunk which allows traffic to be transmitted from either the customer's PBX or the XO switching equipment.

In-Only with DID Trunk: A One-Way trunk equipped with Direct Inward Dialing Service that allows traffic from the XO switching equipment to be transmitted to the customer's PBX.

Two-Way with DID Trunk: A Trunk equipped with Direct Inward Dialing Service that allows traffic to be transmitted from either the customer's PBX or the XO switching equipment.

Direct Inward Dialing (DID) Service: a special trunking arrangement which permits incoming calls from the exchange network to reach a specific PBX station directly without an attendant's assistance.

20.3.1 PBX Analog Trunks

The PBX Analog Trunk provides a two-wire access loop from the customer premises to the serving central office. The transmission via this loop supports Clear Channel Capability where available. Call traffic in static Channels can be allocated for specific services, such as identified above.

20.3 Trunks (Cont'd)20.3.3 PBX Analog Trunk & Digital Switched T-1 Standard features

Each PBX Analog Trunk & Digital Switched T-1 includes the following features at no additional charge.

Hunting

Ascending Trunk Selection: Ascending Trunk Selection occurs when a switching unit selects from a Trunk Group the first available Trunk going from the first trunk of the trunk group, ascending to the last trunk of the Trunk Group. (example: hunting from the 1st trunk through last trunk on Trunk Group)

Descending Trunk Selection: Descending trunk selection occurs when a switching unit selects from a Trunk Group the first available Trunk going from the last trunk of the trunk group, descending to the first trunk of the Trunk Group. (example: hunting from last trunk of Trunk Group toward the 1st trunk of the Trunk Group).

Least Idle Trunk Selection ("LIDL"): LIDL trunk selection occurs when a switching unit selects from a Trunk group the Trunk that has been idle for the shortest period of time.

Most Idle Trunk Selection ("MIDL"): MIDL Trunk selection occurs when a switching unit selects from a Trunk group the Trunk that has been idle for the longest period of time.

Alternative Call Routing: Allows the customer to route calls to any service within the switch to handle calls in case of a disaster or for call overflow purposes. Typically a customer will route calls from one Trunk Group to another Trunk Group. Calls overflow to the Alternate Call Route when they encounter a busy condition. There are three types of busy conditions:

Overflow Call Processing – all trunks in the trunk group are busy.

System Busy – This busy condition is caused by network system problems, such as T1 Carrier being down or SS7 related problems.

Manual Busy – This condition is caused by the trunk group being manually taken down, typically to do maintenance on the customer side in the PBX or on the telecom side in the network switch.
