VIA OVERNIGHT DELIVERY

Renee J. Jenkins
Director of Administration
Public Utilities Commission of Ohio
180 E. Broad St.
Columbus, OH 43215-3793

Re: Ygnition Networks, Inc.
Case No. 06-1234-TP-ACE

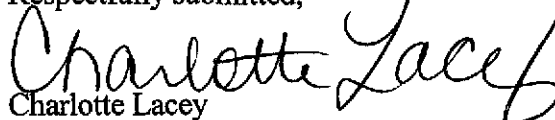

Dear Ms. Jenkins:

Pursuant to staff request, enclosed please find for filing an original and seven (7) copies of replacement tariff sheets 3, 7, 29, 30, 47, 48 and 50-53 of Tariff No. 2, Switched Access.

I have also enclosed an extra copy of this letter to be date stamped and returned to me in the enclosed, self-addressed, postage prepaid envelope.

If you have any questions, or if I may provide you with additional information, please do not hesitate to contact me.

Respectfully submitted,

Charlotte Lacey

Legal Assistant to Lance J.M. Steinhart
Attorney for Ygnition Networks, Inc.

SECTION 1 - DEFINITIONS, (Cont'd.)

Company: Ygnition Networks, Inc., or Ygnition, issuer of this rate sheet

Constructive Order: Delivery of calls to or acceptance of calls from the Company's End User locations over Company-switched local exchange services constitutes a Constructive Order by the Customer to purchase switched access services as described herein. Similarly the selection by a Company's End User of the Customer as the presubscribed IXC constitutes a Constructive Order of switched access by the Customer.

Customer: The person, firm, corporation or other entity which orders Service and is responsible for the payment of charges and for compliance with the Company's rate sheet regulations. The Customer could be an interexchange carrier, a wireless provider, or any other carrier authorized to operate in the state.

8XX Data Base Access Service: The term "8XX Data Base Access Service" denotes a toll-free originating Trunkside Access Service when the 8XX Service Access Code (i.e., 800, 822, 833, 844, 855, 866, 877, or 888 as available) is used.

End User: Any individual, association, corporation, governmental agency or any other entity other than an Interexchange Carrier which subscribes to intrastate service provided by an Exchange Carrier.

Entrance Facility: A trunk facility connecting the Customer's point of presence with the local switching center.

Exchange Carrier: Any individual, partnership, association, joint-stock company, trust, governmental entity or corporation engaged in the provision of local exchange telephone service.

Firm Order Confirmation (FOC): Acknowledgment by the Company of receipt of an Access Service Request from the Customer and commitment by the Company of a Service Date.

Inter-MTA Traffic - Wireless traffic originating on the network of a CMRS provider within one MTA and terminating to the Company's end-user subscribers in another MTA.

Intra-MTA Traffic - Wireless traffic originating on the network of a CMRS provider within a MTA and terminating to the Company's end-user subscribers in the same MTA.

SECTION 2 - RULES AND REGULATIONS, (Cont'd.)**2.3 Obligations of the Customer (Cont'd.)****2.3.3 Jurisdictional Reporting (cont'd.)**

The Customer shall keep records of call detail from which the percentage of interstate and intrastate use can be ascertained and, upon request of the Company, shall make the records available for inspection as reasonably necessary for purposes of verification of the percentages. The Company reserves the right to conduct an audit at any time during the year. The Customer, as its own expense, has the right to retain an independent auditing firm.

The company has certain obligations pertaining only to the provision of Switched Access Service. These obligations are as follows:

2.3.4 Network Management

The Company will administer its network to provide acceptable service levels to all telecommunications users of the Company's network services. Generally, service levels are considered acceptable only when both End Users and Customers are able to establish connections with little or no delay encountered within the Company's network. The Company maintains the right to apply protective controls, i.e., those actions, such as call gapping, which selectively cancel the completion of any traffic carried over its network, including that associated with a Customer's Switched Access Service. Generally, such protective measures would only be taken as a result of occurrences such as a failure or overload of Company or customers facilities, natural disasters, mass calling or national security demands.

2.3.5 Design and Traffic Routing of Switched Access Service

The Company shall design and determine the routing of Switched Access Service, including the selection of the first point of switching and the selection of facilities from the interface to any switching point and to the end offices where busy hour minutes of capacity are ordered. The Company shall also decide if capacity is to be provided by originating only, terminating only, or two-way trunk groups. Finally, the Company will decide whether trunk side access will be provided through the use of two-wire or four-wire trunk terminating equipment. Selection of facilities and equipment and traffic routing of the service are based on standard engineering methods, available facilities and equipment and the Company's traffic routing plans. If the Customer desires different routing or directionality than that determined by the Company, the Company will work cooperatively with the Customer in determining (1) whether the service is to be routed directly to an end office or through an access tandem switch and (2) the directionality of the service.

2.3.6 Provision of Service Performance Data

Subject to availability, end-to-end service performance data available to the Company through its own service evaluation routines, may also be made available to the Customer based on previously arranged intervals and format. The data provides information on overall end-to-end call completion and non-completion performance e.g., Customer equipment blockage, failure results and transmission performance. The data does not include service performance data which is provided under the tariff sections, testing services results. If data is to be provided in other than paper format, the charges for such exchange will be determined on an individual case basis.

2.3.7 Trunk Group Measurements Reports

Subject to availability, the Company will make available trunk group data in the form of usage in CCS, peg count and overflow to the Customer based on previously agreed to intervals.

SECTION 2 - RULES AND REGULATIONS, (Cont'd.)**2.4 Customer Equipment and Channels****2.4.1 General**

A Customer may transmit or receive information or signals via the facilities of the Company.

2.4.2 Station Equipment

A. The Customer is responsible for providing and maintaining any terminal equipment on the Customer Premises. The electric power consumed by such equipment shall be provided by, and maintained at the expense of, the Customer. All such terminal equipment must be registered with the FCC under 47 C.F.R., Part 68 and all wiring must be installed and maintained in compliance with those regulations. The Company will, where practicable, notify the Customer that temporary discontinuance of the use of a service may be required; however, where prior notice is not practicable, nothing contained herein shall be deemed to impair the Company's right to discontinue forthwith the use of a service temporarily if such action is reasonable under the circumstances. In case of such temporary discontinuance, the Customer will be promptly notified and afforded the opportunity to correct the condition which gave rise to the temporary discontinuance. During such period of temporary discontinuance, credit allowance for service interruptions as set forth in Section 2.6 following is not applicable.

2.4.2 Station Equipment (cont'd.)

B. The Customer is responsible for ensuring that Customer-provided equipment connected to Company equipment and facilities is compatible with such equipment and facilities. The magnitude and character of the voltages and currents impressed on Company-provided equipment and wiring by the connection, operation, or maintenance of such equipment and wiring shall be such as not to cause damage to the Company-provided equipment and wiring or injury to the Company's employees or other persons. Any additional protective equipment required to prevent such damage or injury shall be provided by the Company at the Customer's expense.

2.4.3 Interconnection of Facilities

A. Any special interface equipment necessary to achieve compatibility between the facilities and equipment of the Company used for furnishing Access Services and the Channels, facilities, or equipment of others shall be provided at the Customer's expense.

B. Access Services may be connected to the services or facilities of other communications carriers only when authorized by, and in accordance with, the terms and conditions of the tariffs of the other communications carriers which are applicable to such connections.

SECTION 5 - SWITCHED ACCESS RATES, (Cont'd.)

5.2 Rate Categories

5.2.1 There are three rate categories which apply to Switched Access Service:

- Local Switching
- Local Transport
- Common Line

5.2.1 Local Switching

Local Switching provides for the use of end office switching equipment. Included in Local Switching are:

The Common Switching, which provides the local end office switching functions and optional features.

Transport Termination, which provides for the trunk side arrangements which terminate the Local Transport facilities. The number of Transport Terminations provided will be determined by the Company.

Where end offices are appropriately equipped, international dialing may be provided. International dialing provides the capability of switching international calls with service prefix and address codes having more digits than are capable of being switched through a standard equipped end office.

SECTION 5 - SWITCHED ACCESS RATES, (Cont'd.)

5.2 Rate Categories, (Cont'd.)

5.2.3 Toll-Free 8XX Data Base Query

The Toll-Free 8XX Data Base Query Charge, will apply for each Toll-Free 8XX call query received at the Company's (or its provider's) Toll-Free 8XX data base.

5.2.4 The Local Transport rate category provides the transmission facilities between the Customer premises and the end office switch(es) where the Customer traffic is switched to originate or terminate its communications.

Local Transport is a two-way voice frequency transmission path composed of facilities determined by the Company. The two-way voice frequency path permits the transport of calls in the originating direction (from the End User end office switch to the Customer's premises) and in the terminating direction (from the Customer's premises to the end switch), but not simultaneously. The voice frequency transmission path may be comprised of any form or configuration of plant capable of and typically used in the telecommunications industry for the transmission of voice and associated telephone signals within the frequency bandwidth of approximately 300 to 3000 Hz.

The Company will work cooperatively with the Customer in determining (1) whether the service is to be directly routed to an end office switch or through an access tandem switch, and (2) the directionality of the service.

Transmission Paths

The number of Transport transmission paths provided is based on the Customer's order and is determined by the Company.

Interconnection

Interconnection of non-Company switched access transport facilities is available between and end office and a Customer point of presence where such facilities are provided.

SECTION 5 - SWITCHED ACCESS RATES, (Cont'd.)

5.4 Rates and Charges

5.4.1 Local Transport

	<u>Non-Recurring</u>	<u>Monthly Recurring</u>
(A) <u>Entrance Facility</u>		
(1) Per DSI		\$227.00
(B) <u>Direct Transport</u>		
(1) <u>Dedicated Transport</u>		
(A) <u>Termination</u>		
First	\$310.00	
Each Add'l	\$250.00	
(B) <u>Facility</u>		
Per Mile	\$25.00	
Tandem Port	\$133.80	
Trunk Port	\$120.25	
(C) <u>Common Transport</u>		
(1) <u>Trunk Charges</u>		
First	\$115.00	
Each Add'l	\$40.00	
(2) <u>Tandem Switched Transport</u>		
		<u>Per Access Minute</u>
Termination	\$0.000244	
Facility (per mile)	\$0.000044	
Multiplexing	\$0.000042
