8.1 EXISTING LAND OWNERSHIP AND USE

8.1.1 Land Ownership

Approximately 97 percent of the proposed Rockies Express Pipeline-East (REX-East) Project pipeline route will cross privately owned land. Two percent of the land crossed by the pipeline route is managed or owned by state agencies. The remaining 1 percent of the land crossed by the pipeline route is managed or owned by federal agencies or local municipalities. Public lands in Missouri crossed by the proposed pipeline route are owned or managed by the U.S. Army Corps of Engineers (COE), the U.S. Fish and Wildlife Service, the Missouri Department of Natural Resources (MDNR), the Missouri Department of Conservation (MDOC), or the Missouri Department of Transportation. Public lands in Illinois crossed by the proposed pipeline route are owned or managed by the Illinois Department of Natural Resources (ILDNR) or the Illinois Department of Transportation. Public lands in Indiana crossed by the proposed pipeline route are owned or managed by the National Park Service, COE, or the Indiana Department of Transportation. Public lands in Ohio crossed by the proposed pipeline route are owned or managed by the Ohio Department of Natural Resources (ODNR) and the COE – Huntington District. Table 8.1.1-1 summarizes the land ownership that will be crossed by the pipeline route. In addition to the pipeline data presented in the table, the compressor stations in Nebraska and Wyoming will be located on privately owned land.

TABLE 8.1.1-1

Note: The numbers in this table have been rounded for presentation purposes. As a result, the totals may not reflect the exact sum of the addends in all cases		

8.1.2 Existing Land Use

Land uses that will be affected by the REX-East Project were assigned a land use classification based on the principal land characteristic in a given area. Through review of U.S. Geological Service (USGS) Land Use and Land Cover data and field reconnaissance, five general land uses were defined for the REX-East Project. Although there is a general correlation, the vegetation types described in Resource Report 3 may vary from the land use classifications described here as vegetation type does not always dictate land use. The following summarizes the characteristics of each land use.

- Agricultural Land consists of pasture/hay, row crops, and small grains.
- Forest Land consists of mainly deciduous forest and mixed forest. Additionally, forested wetlands are grouped under this land use classification.
- Open Land consists of grasslands, bare rock, sand, clay, non-forested wetlands, and transitional land areas. Wetland impacts are discussed in section 2.3.1 of Resource Report 2.

- Developed Land consists of commercial/industrial and residential lands. Commercial/industrial consists of land used for commercial or industrial purposes as well as major road and railroad crossings, quarries, strip mines, and gravel pits. Residential land consists of existing developed residential areas that include single and multiple family dwellings in subdivisions as well as in rural areas.
- Open Water consists of waterbody crossings 100 feet or greater in width.

In addition to characterizing the land use types in the project area, Rockies Express identified 100-year floodplains through the Federal Emergency Management Agency's (FEMA's) Flood Insurance Rate Maps and Geographic Information Systems (GIS) database research applicable to the proposed project. Rockies Express has considered the location of the project in relation to FEMA-identified floodplains and any applicable land use management stipulations or constraints in an attempt to protect floodplains. The pipeline will be located underground; hence the floodplain will not be modified except temporarily during construction activities. Following the completion of construction activities, contours will be restored to preconstruction conditions to the extent possible.

The Chandlerseville Compressor Station located at milepost (MP) 573.8 in Muskingum County, Ohio will be constructed adjacent to the 100-year floodplain. Rockies Express will construct the compressor station above the 100-year floodplain elevation. The Muskingum County floodplain building regulations are currently being evaluated and will be adhered to during permitting of this facility.

8.1.2.1 Pipeline Right-of-Way and Additional Temporary Workspace

As shown in table 8.1.2-1, the principal land use that will be crossed by the pipeline route is agricultural (525.6 miles or about 84 percent of the total pipeline route). Other land uses that will be crossed by the proposed pipeline route include forest land (105.0 miles or 15 percent of the total pipeline route), open land (3.0 miles or less than 1 percent of the total pipeline route), open water (1.2 miles or less than 1 percent of the total pipeline route), and developed land (0.7 mile or less than 1 percent of the total pipeline route). Table 8A-1 of Appendix 8A identifies by MP the land uses crossed by the proposed pipeline route.

^a Agricultural land consists of consists of pasture/hay, row crops, and small grains.

^b Forest land consists mainly of deciduous and mixed forest and forested wetlands.

^c Developed land consists of existing residential developments and existing commercial/industrial development such as utility stations, rock quarries, strip mines, gravel pits, railroad crossings, and road crossings.

^d Open land consists of bare rock, sand, clay, and non-forested wetlands.

^e Open water consists of waterbody crossings 100 feet or greater in width.

Note: The numbers in this table have been rounded for presentation purposes. As a result, the totals may not reflect the exact sum of the addends in all cases. Some totals may be off by 0.1 place.

The Rockies Express Pipeline Project will be collocated with existing rights-of-way for approximately 53 percent of its length (see table 1.1.2-2 in Resource Report 1). In general, where Rockies Express' facilities will be collocated with an existing pipeline right-of-way, the proposed pipeline centerline will be offset a minimum of 65 feet from the Texas Eastern and

Panhandle pipeline centerlines. Rockies Express' proposed 125-foot-wide construction right-of-way may overlap the area disturbed by construction of these existing pipelines.

In addition to the temporary right-of-way, additional temporary workspace areas will be required during construction. Generally, additional temporary workspace areas will be required for equipment staging at waterbody, wetland, road, railroad, and underground utility line crossings; in areas of steep slopes; and at the beginning and end of a construction spread. Rockies Express has not yet identified the locations or dimensions for additional temporary workspaces areas for its draft Resource Reports. However, this information will be provided with Rockies Express' application.

8.1.2.2 Aboveground Facilities

Aboveground facilities that will be constructed and operated as part of the REX-East Project include 7 compressor stations, 20 meter stations, 43 mainline block valves, 4 pig launchers, and 4 pig receivers. Section 1.1.2.2 in Resource Report 1 discusses the locations of these facilities. The principal land use that will be affected by construction and operation of compressor stations and meter stations is agricultural land (12 percent of the total acres disturbed by construction of compressor stations and meter stations).

The pig launchers and receivers will be installed within the compressor station sites and, therefore, will require no additional land for operation. The mainline valves will be constructed and operated where required by the U.S. Department of Transportation regulations. The mainline valves will be installed within the compressor station sites or along the pipeline route and within the permanent right-of-way and, therefore, will require no additional land for operation. Any mainline valve that is not collocated within a compressor station will typically consist of a 50-foot-wide by 50-foot-wide (0.06-acre) fenced-in area. Rockies Express has attempted to locate these facilities adjacent to roads, wherever possible, to minimize disruption to land uses and to facilitate the operation and maintenance of the pipeline.

8.1.2.3 Access Roads

Rockies Express is in the process of identifying access roads necessary for the project. For the majority of construction, Rockies Express will use preexisting roads to provide access to the construction right-of-way. In these cases, the roads that are paved or graveled public roads will typically not require modification. Routine road maintenance, such as grading may be required to maintain the dirt roads in a passable condition.

Currently, the only new permanent roads that will be constructed are those that will provide access to new compressor station and meter station sites. The mileposts of these roads are currently being evaluated and will be provided with Rockies Express' application.

Should improvement of any existing or creation of additional new access roads be necessary, these roads will be surveyed for listed species, wetlands and cultural resources, as required, and the information provided to the Federal Energy Regulatory Commission (FERC) for review and approval prior to use. Rockies Express will negotiate with landowners for use of any suitable private roads that may be used during construction or operation of its proposed facilities.

A table of roads crossed by the proposed pipeline route and those that will be used to access the right-of-way is provided in Appendix 1B. These roads will be identified on the alignment sheets and appear on the topographic maps included with Rockies Express' application as "Non-Internet Public" information.

8.1.2.4 Pipe Storage and Contractor Yards

Rockies Express will use pipe storage yards to stockpile pipe, fabricate weights, and concrete-coat joints. Rockies Express also intends to use contractor yards during construction to stage construction, store materials, park equipment, and set up temporary construction offices. Rockies Express has not yet identified the locations of yards for construction. However, this information will be provided with Rockies Express' application

8.1.3 Construction and Operation Impacts and Mitigation

The proposed project will result in land use impacts from the construction right-of-way, permanent right-of-way, additional temporary workspace areas, access roads, pipe and contractor yards, and aboveground facilities. Rockies Express intends to use a 125-foot-wide construction right-of-way in upland areas and a 100-foot-wide construction right-of-way in wetlands. Following construction, Rockies Express will maintain (e.g., annual clearing) a 50-foot-wide portion of its easement, referred to as the permanent right-of-way, for operation of the pipeline facilities. Rockies Express has not yet identified the locations and/or dimensions of all additional temporary workspace areas, aboveground facilities, and permanent access roads associated with the project. However, this information will be provided with Rockies Express' application.

Construction of the proposed project will temporarily disturb approximately 9,744 acres. Of that total, approximately 3,852 acres will be retained by Rockies Express as permanently maintained pipeline right-of-way and approximately 111.6 acres for will be maintained for operation of the proposed aboveground facilities. Because approximately 84 percent of the right-of-way will be located on agricultural lands, maintenance in these areas will be limited by current farming practices. Table 8.1.3-1 summarizes the land use impacts (in acres) that will be disturbed by construction and operation of the entire REX-East Project. Table 8.1.3-2 lists the land use impacts (in acres) by county that will be disturbed by the proposed pipeline construction right-of-way. Table 8.1.3-3 lists the land use impacts (in acres) by county that will be disturbed by the proposed permanent pipeline right-of-way.

8.1.3.1 Pipeline Right-of-Way

Agricultural Land

Agricultural land will be the most predominant land use affected by construction and operation of the proposed REX-East Project. Agricultural land is primarily comprised of pasture/hay, row crops, and small grain crops. Crops along the proposed pipeline route primarily consist of corn, soybean, and alfalfa. Approximately 8,052.3 acres of agricultural land will temporarily be affected during construction and 3,278.6 acres will be affected by operation, of which 96.6 acres (construction and operation) are associated with the proposed aboveground facilities.

The primary impacts on agricultural land during construction will include the loss of crops within the work area and the potential for reduced yield of future crops. Agricultural land in the construction area generally will be taken out of production for one growing season. Rockies Express will implement the mitigation measures (e.g., topsoil segregation and compaction rehabilitation) described in the REX-East Project Upland Construction Plan (REX-East Plan) and an Agricultural Impact Mitigation Agreement (AIMA) to minimize potential effects of construction on agricultural lands and future crop production (see Appendix 1C of Resource Report 1). To minimize impacts on agricultural land use, Rockies Express will compensate landowners or tenants for crop losses and damages caused by construction activities. In addition, topsoil segregation practices will be used where annually cultivated or rotated agricultural lands exist, in hayfields, and at the owner's request.

Rockies Express will take appropriate measures to minimize these impacts on agricultural operations by adopting the following mitigation measures:

- contacting landowners to locate fields containing drainage tiles and irrigation systems, where possible;
- maintaining water flow in crop irrigation systems, unless shutoff is coordinated with the affected parties;
- erecting temporary fences where necessary to contain livestock;
- maintaining access to fields, structures, and storage areas during construction; and,
- repairing to pre-construction condition or better fences, drain tiles, and other improvements disturbed by construction activities.

About 0.6 mile of pivot-irrigated crop land will be crossed (based on review of aerial photographs). This pivot irrigated crop land is located in Parke County, Indiana at MP 248.2. Several construction-related activities may damage or interrupt irrigation during construction, including trenching, grading, stringing, welding, and backfilling. If the flow of irrigation water is disrupted for a prolonged period, crops may be damaged and crop yields reduced. Rockies Express will coordinate disruption of irrigation systems with each landowner and compensate the landowner for damages and lost production. Rockies Express will also repair damaged irrigation systems and coordinate with the landowner to assess crop productivity. Impact and

mitigation will be site-specific and based on agreements and/or easement conditions with the affected landowners or tenants.

Following construction, the majority of agricultural land uses will be able to continue within the permanent, operational right-of-way. However, where aboveground facilities are sited on agricultural land, the land use will be permanently changed from agricultural to developed. In addition, some activities with the permanent right-of-way, such as planting of tree and shrubs will be prohibited. Fences will be allowed with Rockies Express' approval provided that they include a gate or gates with locks to allow pipeline maintenance crews access to and passage along the right-of-way and the fence posts are located at least 5 feet away from the pipeline.

Because the right-of-way can be used for crop production following construction, any loss will be a short-term impact. Rockies Express has developed an agriculture compensation program regarding impacts from the construction and operation of the REX-East Project. Landowners will be compensated for anticipated crop losses resulting from construction of the project and for anticipated losses along the permanent easement after construction covering a total period of 5 years. The compensation payment will be offered prior to construction. Rockies Express will consider restoration on active agricultural lands successful when areas are similar to adjacent undisturbed areas, drainage restored and construction debris removed. Rockies Express personnel will be available following construction to respond to ongoing restoration issues related to the REX-East Project.

Conservation Reserve Program (CRP)

Established in 1985 by the Congress, the Farm Service Agency's (FSA) CRP is a voluntary program for agricultural landowners. The program provides eligible farmers and ranchers both technical and financial assistance to conserve and protect soil, water, and related natural resource concerns on their land. It also provides these individuals guidance and assistance in complying with federal and state environmental laws, therefore enabling environmental enhancement. The CRP encourages farmers to convert highly erodible cropland or other environmentally sensitive acreage to vegetative cover, such as tame or native grasses, wildlife plantings, trees, filter strips, or riparian buffers. These areas are afforded special consideration to avoid any breaches in the landowners' contracts.

Through CRP, participants can receive annual rental payments for 10 to 15 years and cost-share assistance to establish long-term, resource conserving covers on eligible farmland. Participating lands exhibit reduced soil erosion, improved water quality, and enhanced wildlife habitats. Nationally, CRP has 735,494 contracts and has restored grasses and trees on over 36 million acres (CRP, 2001). Lands must meet the following criteria in order for lands to be eligible for the CRP:

- cropland that has been planted or considered planted to an agricultural commodity 4 of the 6 years 1996 through 2001;
- physically and legally capable of being planted in a normal manner to an agricultural commodity;
- marginal pasture land;

- have a weighted average Erosion Index of 8 or greater;
- be expiring CRP; or
- be located in a national or state CRP conservation priority area.

Rockies Express is currently consulting with the Natural Resources Conservation Service (NRCS) and FSA to identify CRP lands potentially affected by construction or operation of the project. Rockies Express has not yet identified the locations of any CRP land affected by the project for its draft Resource Reports. However, this information will be provided with Rockies Express' application.

For the most part, CRP lands will be identified during the land acquisition process. The disturbance on CRP land will be temporary because these areas will be reseeded as soon after final grading as possible to encourage rapid revegetation of herbaceous plant cover and discourage the invasion of weed species. The species selected for revegetation may be determined in consultation with the landowner/tenant; however, local agency recommendations also will be taken into consideration. Other mitigative measures related to agricultural lands are discussed above.

Forest Land

Forest land consists of deciduous, evergreen, and mixed forests. Additionally, palustrine forested wetlands are grouped under this land use classification. Approximately 1,593.1 acres of forest land will temporarily be affected during construction and 637.2 acres will be affected by operation of the pipeline.

The primary effect of construction on forest land will be the temporary removal of trees and shrubs from the 125-foot-wide construction right-of-way in upland areas and 100-foot-wide construction right-of-way in wetlands. Following construction, trees and shrubs will be allowed to regenerate within the areas that will not be retained as part of the 50-foot-wide permanently maintained right-of-way. The permanent right-of-way will be maintained as described in the REX-East Plan and Wetland and Waterbody Construction and Mitigation Procedures (REX-East Procedures). The rate of forest reestablishment will depend upon the type of vegetation, the length of growing season, and the natural fertility of the soils. Early successional species are anticipated to begin colonizing the right-of-way within a few years of construction, followed by the establishment of later successional species. Regrowth to the sapling-young tree stage could take 15 to 30 years, while regrowth of forests to mature conditions could take between 50 to 100 years depending on species.

Construction and operation of the proposed project are not expected to have significant impacts on forest land given the existing cover type and Rockies Express' proposed mitigation measures.

Classified Forests

Classified forests are privately owned areas in Indiana that have been enrolled for stewardship by the landowner's voluntary agreement with the Indiana Department of Natural Resources (INDNR). Classified Forests that will be crossed by the pipeline route in Indiana are listed in table 8.1.3-4.

TABLE 8.1.3-4

Forest Legacy Areas

Per the Classified Forest Act of Indiana, forest legacy areas are comprised of at least 10 acres, which have been set aside for the production of timber and wildlife, the protection of watersheds, or the control of soil erosion (INDNR, 2006b). In exchange for the retention of these valuable lands, landowners receive tax breaks and management assistance from state foresters.

The Shawnee Hills - Flatrock Basin has been designated a forest legacy area by the INDNR, Division of Forestry, and will be crossed in parts of Morgan County (INDNR, 2006a). Rockies Express has not yet identified the exact locations of the forest legacy areas for its draft Resource Reports. However, this information will be provided with Rockies Express' application. The forest provide watershed protection, timber resources, scenic and recreation values, threatened and endangered species habitat, other fish and wildlife habitat and karst system protection .

A second forest legacy area, the Bluegrass Area, will be crossed in Franklin County, as identified by the INDNR, Division of Forestry (INDNR, 2006a). Rockies Express has not yet identified the exact locations of the forest legacy areas for its draft Resource Reports. However, this information will be provided with Rockies Express' application. This area contains extensive forests that provide wildlife habitat, timber, scenic resources and watershed protection. The area also has a diversity of historic resources and rural landscapes. Increasing expansion of metropolitan Cincinnati, development pressures from riverboats and the presence of interstate highway corridors were noted in the decision to include this area as a Forest Legacy Area.

Rockies Express will consult with the classified forest landowners to discuss mitigation procedures and/or financial restitution.

Open Land

Open land consists of bare rock, sand, clay, and non-forested wetlands. Approximately 61.3 acres of open land will temporarily be affected during construction and 18.3 acres will be affected by operation of the pipeline and 15.0 acres will be affected by aboveground facilities.

Open land will be temporarily disturbed during grading, trenching, backfilling, and restoration. Rockies Express will cross open land in accordance with the REX-East Plan and Procedures (see Appendices 1C and 1D, respectively, of Resource Report 1). After final construction cleanup, these areas will be reseeded in accordance with Rockies Express' project-specific mitigation plans and agency and landowner recommendations.

Areas that will remain within Rockies Express' permanently maintained 50-foot-wide right-of-way are expected to revert back to their preconstruction land use after the vegetation is established. Vegetation maintenance practices will periodically remove woody shrubs from the right-of-way.

Developed Land

Developed land includes both residential and commercial/industrial land. Approximately 16.5 acres of developed land will temporarily be affected during construction and 6.3 acres will be affected by operation of the pipeline.

Based on aerial photography and field surveys, Rockies Express identified structures that are located within 50 feet of the proposed construction work area. Table 8.1.3-5 identifies the locations of these buildings by milepost, approximate distance from the construction work area, and approximate distance and direction from the proposed pipeline centerline. Upon completion of field surveys, a definitive number of structures within 50 feet of the right-of-way, and any specific mitigation measures that may be necessary, will be identified.

* Does not include areas affected by the construction right-of-way and additional temporary workspace areas. The construction right-of-way and additionally temporary workspaces areas are currently being evaluated and will be provided with Rockies Express' application.				

Rockies Express will adopt the following mitigation measures for any residences within 50 feet of the construction work area:

- avoid removal of trees and landscaping unless necessary to construct the pipeline or for the safe operation of the construction equipment;
- restore all lawns and landscaping within the construction work area promptly after backfilling the trench; and

- install and maintain construction fencing at the edge of the construction work area for a distance of 100 feet on either side of the residence and at a minimum maintain this fencing throughout the open trench phases of the pipe installation.

In addition, Rockies Express will develop site-specific construction plans for buildings (if occupied) within 50 feet of the construction work area. The plans will identify the mitigation measures Rockies Express will implement to promote safe and efficient installation with minimal impact.

Most developed land uses will be able to continue following construction. However, some activities, such as the building of new commercial or residential structures will be prohibited on the permanent right-of-way. During easement negotiations, landowners will have the opportunity to request that their development plans be considered during pipeline construction.

The project will create intermittent, temporary increases in noise levels at any given location within the project areas as construction activities precede. Most of the noise currently generated in any given area along the proposed project route is due to human activity such as vehicle traffic and industrial processes (e.g., mining). Increases in noise levels will likely occur during construction from increased vehicle traffic on local roads and the operation of construction equipment on the right-of-way. Increases in noise levels will be short-term and occur mostly during daylight hours. Noise impacts are discussed further in section 9.2.3 of Resource Report 9.

Air quality impacts on developed land will be temporary. Air quality may be affected by the proposed project as a result of an increase in vehicular traffic and equipment use during construction and by the operation of the proposed compressor stations. The effects of increased vehicle traffic and construction equipment will be short-term and will consist of a temporary increase in fugitive dust and mobile source emissions. Fugitive dust is dependent on soil type, weather conditions, and the extent of ground disturbance. As necessary, fugitive dust will be controlled by water trucks and/or applying dust suppressants to exposed soils on the right-of-way and to public and private roads used to access the right-of-way. Impacts on air quality are discussed further in section 9.1.3 of Resource Report 9.

The proposed pipeline project may also result in slow moving construction vehicles and road closures. This inconvenience will be short-term and will occur mostly during daylight hours. Low-traffic roads and driveways crossed by the proposed pipeline route may be closed for up to 72 hours to allow for trenching and pipe placement. However, Rockies Express will attempt to complete construction across these areas within 24 hours. Prior to closing roads, a road closure schedule will be arranged with appropriate transportation authority, if applicable, and local businesses that may be affected by the closures and law enforcement agencies will be notified. Where required by the landowner, a temporary bridge or bypass may be established on small roads or driveways.

During construction, heavy equipment could track soil and mud onto roadways. If excess soil or mud is tracked onto roadways, it will be removed as soon as practical and placed back in the construction work area. Sediment barriers will be installed at the base of slopes adjacent to roads to prevent sediment from the construction right-of-way from being washed onto roads during rain events.

Tracked equipment will cross paved roads on a combination of rubber mats, tires, and/or plywood sheets to prevent damage to roads. Rockies Express will coordinate with the appropriate transportation authority regarding the need for road repair following construction.

Open Water

Open water consists of waterbody crossings 100 feet or greater in width. Approximately 20.8 acres of open water will temporarily be affected during construction. Operation of the project will not affect open water because the pipeline will be buried under waterbody crossings.

Pipeline construction across waterbodies can result in both short- and long-term environmental impacts if not properly mitigated. To minimize impacts associated with sedimentation and turbidity during open-cut, flume, and dam and pump waterbody crossings, and the other potential impacts discussed in section 2.3.6.2 of Resource Report 2, Rockies Express will complete each crossing in accordance with the REX-East Procedures. Additionally, Rockies Express intends to develop site-specific waterbody crossing plans for major waterbodies, including the waterbodies that will be crossed using the horizontal directional drill (HDD) method.

The use of heavy equipment to complete pipeline installation across waterbodies increases the potential for accidental releases of fuels, lubricants, and coolants. The accidental release of these materials could adversely affect aquatic species and contaminate public water supplies that rely on surface water intakes located downstream of the waterbody crossing. Rockies Express will minimize the potential impact of spills of hazardous materials by adhering to the Spill Prevention, Containment, and Control (SPCC) Plan, which is currently being developed for the project. The SPCC Plan will describe preventive measures such as personnel training, equipment inspection, and refueling procedures to reduce the likelihood of spills; and mitigative measures, such as containment and cleanup, to minimize potential impacts should a spill occur. Rockies Express will provide advance notification to the operators of potable surface water intakes regarding waterbody construction schedules and will notify the operators of any accidental releases of hazardous materials that may impact their water supply.

Additionally, Rockies Express is developing a Stormwater Pollution Prevention (SWPP) Plan for use during construction to minimize and mitigate potential erosional impacts on surface waters.

8.1.3.2 Additional Temporary Workspace Areas

Rockies Express has not yet identified the locations or dimensions for additional temporary workspaces areas for its draft Resource Reports. However, this information will be provided with Rockies Express' application.

8.1.3.3 Aboveground Facilities

The primary land uses that will be affected by construction and operation of the compressor stations are agricultural land (96.6 acres) and open land (15.0 acres).

As stated above, Rockies Express has not yet identified the construction and operational area required for the proposed meter station sites. However, this information will be provided with the application. The proposed pig launcher and receivers will be installed within the

proposed compressor stations. While the exact locations of mainline valves are not yet known, the impacts from construction and operation of these facilities are expected to be *minimal* because they will be installed within a compressor station or within the permanent right-of-way. Each mainline valve will impact approximately 0.06 acre of land.

8.1.3.4 Access Roads

As discussed above, the only new permanent roads that will be constructed are those that will provide access to new compressor station and meter station sites. Rockies Express has not yet identified the construction and operational area required for the permanent access roads. However, this information will be provided with Rockies Express' application.

8.2 PLANNED DEVELOPMENTS

Rockies Express is confirming the locations of planned developments crossed or located within 0.25-mile of the proposed facilities. Currently, Rockies Express is aware of three planned developments crossed by the proposed route, including two residential developments and one water supply reservoir. Following is a description of the three developments.

The first planned development, a residential subdivision called Circle Z Addition, is located in Macon County, Illinois and is crossed between MPs 162.7 and 162.9. The preliminary plat of the Circle Z Addition was created in 1998 and Rockies Express understands that the area crossed is a larger lot that may be developed in the future. In order to minimize impacts on future development, Rockies Express sited its pipeline along the southern property line.

The second planned development, known as the Disney Residential Development, is located in Hendricks County, Indiana and will be crossed by the proposed pipeline route between MPs 297.2 and 297.8. The Disney Residential Development was platted in 1978, but has not been built. Although it is unclear if the area will be developed in the near future, Rockies Express met with the landowner and agreed to site the pipeline along lot lines to minimize impacts.

The third planned development is a water supply reservoir that will be crossed by the proposed pipeline route between MPs 125 and 126 (see figure 8-1 in Volume 2). The City of Springfield, Office of Public Utilities owns several tracts of land adjacent to Brush Creek and Horse Creek in Sangamon County, Illinois. The City of Springfield acquired these properties as part of its proposal to develop the Hunter Lake Project, which would serve as a supplemental water supply reservoir for its customers. The Hunter Lake Project would store approximately 15.3 billion gallons of water in a 3,010-acre reservoir built on Horse and Brush Creeks. During times of need, water would be released from Hunter Lake into Horse Creek and pumped into Lake Springfield. The City of Springfield has filed applications with the U.S. Army Corps of Engineers and the Illinois Environmental Protection Agency seeking authorization to construct the proposed reservoir. The permit applications are currently pending before the agencies.

Rockies Express will confirm the presence of planned developments crossed or within 0.25-mile of the proposed facility and will include the information in its application.

8.3 RECREATION AND SPECIAL LAND USES

Generally, recreation and special land uses include federal, state, or county parks and forests; conservation lands; wildlife habitat management areas; hunter management areas; natural landmarks; scenic byways; designated trails; recreational rivers; and campgrounds. Recreation and special interest areas were identified by reviewing USGS topographic maps; DeLorme Gazetteers (DeLorme, 2000-2003) and agency consultation. Historic or culturally significant areas affected by the proposed project will be discussed in the cultural resources survey reports to be included as part of Resource Report 4 as part of Rockies Express' application. Unique, sensitive, or significant wildlife habitats (e.g., high quality upland mesic forest) are discussed in section 3.2.2 of Resource Report 3. Major and sensitive waterbodies are discussed in section 2.2.4.2 of Resource Report 2.

Two perennial waterbodies that will be crossed by the REX-East Project are designated as National Wild and Scenic Rivers and listed on the Ohio State Scenic Rivers Program. The Little Miami River is located in Warren County, Ohio and Big Darby Creek is located in Pickaway County, Ohio. Scenic rivers are classified and designated according to the outstanding qualities a stream possesses. The scenic rivers are discussed further in section 2.2.4.2 of Resource Report 2.

8.3.1 Existing Recreation and Special Land Uses

The REX-East Project will cross recreation and special land use areas in Missouri, Illinois, Indiana, and Ohio. Table 8.3.1-1 lists the milepost location, crossing length, area name, and land management agency for each of these areas. No recreation or special interest areas were identified within 0.25 mile of the proposed Arlington Compressor Station site in Carbon County, Wyoming or the Bertrand Compressor Station site in Phelps County, Nebraska. In addition the areas listed in table 8.3.1-1, the REX-East Project will also be located within 0.25 mile of various state, county, and local parks. These include Sangchris Lake State Park, which extends through Sangamon and Christian Counties, Illinois; Blue Rock State Park, which is located in Muskingum County, Ohio; one local park, Wimple Park, which is located in Douglas County, Illinois; and four county parks, which are located in Franklin County, Ohio.

8.3.1.1 Missouri

Conservation Opportunity Areas

The pipeline route will cross two areas between MPs 1.1 and 7.0 and MPs 16.5 to 17.5 that are identified as Conservation Opportunity Areas (COA). The MDOC, with the involvement of local stakeholders, identifies tracts of land where opportunity exists for wildlife conservation. Each COA has a stakeholder team that develops a COA profile that outlines goals and conservation actions. Rockies Express is currently consulting with the MDOC to identify the

particular goals and conservation actions in these two areas. Rockies Express will file this information with its application.

Scenic Byway – Little Dixie Highway

The pipeline route will cross the Little Dixie Highway, a Scenic Byway, at MP 40.0 in Pike County, Missouri. This scenic byway stretches alongside the Mississippi River and offers various views of the river along its 30 mile stretch. The scenic byway is also on the Mississippi flyway where 40 percent of all North American waterfowl fly past on their way to annual migrations.

Ted Shanks Conservation Area

The western HDD directional drill segment of the Mississippi River will cross under the southern end of the Ted Shanks Conservation Area (TSCA) at about MP 42.5. The TSCA is located along the Mississippi River in Pike County, Missouri approximately 16 miles north of the City of Louisiana. The TSCA is approximately 6,705 acres in size and is comprised of 1,930 acres of bottomland hardwoods, 1,364 acres of marsh, 1,264 acres of mixed scrub shrub/emergent wetlands, 800 acres of row crops, 575 acres of ox-bow lakes and sloughs, and 722 acres of old fields, upland woods, levees, and roads. In addition, the area contains 35 miles of levees, two pump stations, nine miles of water canals, and 45 water control structures. The TSCA is managed for multiple uses, including: hunting; fishing; bird-watching; camping, hiking; and picnicking.

8.3.1.2 Illinois

Scenic Highway – Old Route 66

The pipeline route will cross Old Route 66, a Scenic Highway, at MP 122.5 in Sangamon County, Illinois. This route was the first paved road linking Chicago and Los Angeles (Historic Route 66, 2006). Internationally recognized this scenic highway revitalized Illinois' rural communities with a variety of roadside restaurants, filling stations, and hotels along its route.

Embarras River – Natural Areas Inventory

The Embarras River will be crossed by the pipeline route at MP 202.7 in Douglas County, Illinois. The Embarras River is listed on the Illinois Natural Areas Inventory and is identified as a biologically significant stream. The Embarras Camargo River is approximately 112 miles in length and extends from its headwaters near Champaign-Urbana to its confluence with the Wabash River near Lawrenceville, Illinois. The sand and gravel substrate of the midsection of the river provides habitat for a number of rare fish and mussel species and has supported eleven state-threatened or state-endangered species (see section 3.4 of Resource Report 3 for a discussion of threatened and endangered species).

8.3.1.3 Indiana

Nationwide Rivers Inventory (Big Walnut Creek and Big Blue River)

The pipeline route will cross two waterbodies in Indiana that are listed in the Nationwide Rivers Inventory (NRI): Big Walnut Creek at MP 280.9 and Big Blue River at MP 338.6. As

discussed further in section 2.3.4.2 of Resource Report 2, the National Park Service maintains the NRI as a database for river segments that are eligible for federal protection under the Wild and Scenic Rivers Act of 1968. To be listed on the NRI, a waterbody must be free flowing and possess one or more Outstandingly Remarkable Values (ORVs). These ORVs must contain a unique, rare, or exemplary feature that is significant at a regional or national scale (National Park Service, 2004).

Interstate 40 – Historic National Road

The pipeline route will cross Interstate 40, a Historic National Road, at MP 303.0 in Hendricks County, Indiana. This historic road was once a coast-to-coast route, stretching from the Atlantic to the Pacific. However, the entire segment west of Salt Lake City, Utah has been decommissioned in favor of Interstate 80. The highway crosses 12 states after the building of Interstate 80 which traverses through Nevada and California.

8.3.1.4 Ohio

Nationwide Rivers Inventory (Four Mile Creek, Great Miami River, and Paint Creek)

The pipeline route will cross three waterbodies in Ohio that are listed in the NRI: Four Mile Creek at MP 418.9, Great Miami River at MP 428.4, and Paint Creek at MP 483.0. As discussed further in section 2.3.4.2 of Resource Report 2, the National Park Service maintains the NRI as a database for river segments that are eligible for federal protection under the Wild and Scenic Rivers Act of 1968. To be listed on the NRI, a waterbody must be free flowing and possess one or more ORVs. These ORVs must contain a unique, rare, or exemplary feature that is significant at a regional or national scale (National Park Service, 2004).

Little Miami Scenic State Park and National Wild and Scenic River

Little Miami River, crossed at MP 448.0 in Warren County, Ohio, was designated a National Wild and Scenic River in 1969. It flows southwesterly for more than 100 miles and is lined by boreal relics of hemlock and juniper. The associated Little Miami State Park is managed by the ODNR as a trail-corridor that roughly parallels the Little Miami River. Little Miami State Park is approximately 50 miles in length and approximately 100 feet of the park will be crossed by the pipeline route (ODNR, 2006a). A description of National Wild and Scenic Rivers is included in section 2.2.4.2 of Resource Report 2.

Caesar Creek State Park

Caesar Creek State Park, crossed at MP 444.8 in Clinton County, Ohio, is a 4,700-acre state park that is located approximately 40 miles south of Cincinnati. The Caesar Creek valley was impounded in 1978 by the COE to assist with flood control in the Little Miami River watershed, creating the area now used as state park. The state park is leased from the COE and offers outdoor recreation such as boating, fishing, hiking, and camping (ODNR, 2006b). Hunting is also permitted in the park's adjacent wildlife area.

Accommodation Line – Scenic Byway

The pipeline route will cross the Accommodation Line, a Scenic Byway, at MP 446.8 in Warren County, Ohio. This route follows the early 19th Century Accommodation (stagecoach)

Line. It is dotted by historic farms and has large historic districts at both ends. Large sections of the Underground Railroad are buried underneath many homes on this byway. Recreation on this byway is choice. Lakes, rivers, and two state parks offer birding, hunting, fishing, boating, camping, canoeing, and swimming. The famous Little Miami Scenic Trail is a 63-mile paved, river-side trail for rollerblading, walking, jogging, biking, and horseriding.

Deer Creek State Park

Deer Creek State Park, owned by the COE – Huntington District, will be crossed at MP 496.1 in Pickaway County, Ohio (ODNR, 2006f). This 2,337-acre state park opened to the public in 1974. The park provides visitors with hunting, fishing, swimming, and numerous hiking trails. Deer Park Reservoir, completed in 1968, created the lake that offers various water activities to visitors. Open field areas support crops such as corn, wheat, and soybeans (ODNR, 2006c). Deer Creek Wildlife Area is adjacent to the park and is operated by the ODNR Division of Wildlife and managed for upland game.

Big Darby Creek – National Wild and Scenic River

Big Darby Creek, will be crossed at MP 505.7 in Pickaway County. Big Darby Creek is noted nationally for its diversity and abundance of both aquatic and terrestrial plants and animals. Big Darby Creek was designated a state scenic river in 1984 and was designated a national scenic river in 1994. As mentioned above, a description of National Wild and Scenic Rivers is included in section 2.2.4.2 of Resource Report 2.

The creeks banks are flanked with native vegetation varying considerably in width; from only a narrow line of trees to deep and extensive forests. Floodplain trees such as buckeye, sycamore, silver maple and box elder tolerate periods of inundation. Species more adapted to drier soils such as oak and sugar maple line the valley walls.

Perry State Forest and Blue Rock State Forest

Perry State Forest, crossed at MP 544.8, in Perry County, Ohio, and Blue Rock State Forest, crossed at MP 578.1 in Muskingum County, Ohio, are managed by the ODNR for purposes of timber harvest, habitat preservation, and recreational opportunities. Perry State Forest provides visitors with bridal trails, hunting areas, wildlife viewing, and the largest all purpose vehicle riding area in Ohio. Ownership of the 4,578-acre Blue Rock State Forest was acquired by the federal government under the Resettlement Administration, and was later transferred to the ODNR, Division of Forestry. This area offers hunting, fishing, and one of Ohio's most productive and aesthetic forests (ODNR, 2006d; ODNR, 2006e)

Raven Rocks

The proposed pipeline will cross a privately owned preserve between MPs 625.0 and 626.3 in Belmont County, Ohio. Raven Rocks, Inc. (Raven Rocks) was established in 1970 to initially preserve about 850 acres of scenic ravines, hills, and woodlands. Since that time, the 19 members of Raven Rocks have added an additional 410 acres to the preserve. In addition to public education and outreach efforts, the members of Raven Rocks raise and sell Christmas trees to support the preserve. The proposed pipeline route crosses a hemlock-hardwood forest and non-calcareous cliff community type along an existing powerline right-of-way.

8.3.2 Construction and Operation Impacts and Mitigation

One of the primary concerns when crossing recreation and special interest areas is the impact of construction on the purpose for which the area was established (i.e., the recreational activities, public access, and resources the area aims to protect). Construction will alter visual aesthetics by removing existing vegetation and disturbing soils. Construction will also generate dust and noise, which could be a nuisance to recreational users. Construction could also interfere with or diminish the quality of the recreational experience by affecting wildlife movements or disturbing trails. In general, these impacts will be short term and limited to the period of active construction, which typically will be limited to several days to several weeks in any one area. Rockies Express will work with land managers to mitigate construction impacts such as timing and obtaining the required permits or authorizations. Additionally, at several of the waterbody crossings listed on the NRI or defined as Wild and Scenic, Rockies Express will use the HDD method to avoid directly impacting the recreational or special uses of these waterbodies (see Appendix 2A of Resource Report 2).

8.4 VISUAL RESOURCES

8.4.1 Existing Visual Environment

Private lands that will be crossed by the proposed pipeline route are not subject to federal or state visual management standards. Visual resources on private lands are a function of geology, climate, and historical processes; and are influenced by topographic relief, vegetation, water, wildlife, land use, human uses, and development. The primary land use on private lands crossed by the proposed pipeline route is agriculture. The topography varies along the proposed pipeline route from lowlands in eastern Missouri, flat topography in Illinois, Indiana, and Nebraska, to rolling hills in eastern Ohio and Wyoming.

8.4.2 Construction and Operation Impacts and Mitigation

8.4.2.1 Pipeline Right-of-Way

Rockies Express proposes to use a 125-foot-wide construction right-of-way for the majority of the proposed pipeline route, which will be widened in some locations for additional temporary workspace areas. Visual impacts associated with the construction right-of-way and additional temporary workspace areas will include the removal of existing vegetation and the exposure of bare soils, as well as earthwork and grading scars associated with heavy equipment tracks, trenching, blasting, rock formation alteration or removal, and machinery and tool storage. Other visual effects may result from the removal of large individual trees that have intrinsic aesthetic value; the removal or alteration of vegetation that may currently provide a visual barrier; or landform changes that introduce contrasts in visual scale, spatial characteristics, form, line, color, or texture.

Visual impacts will be greatest where the proposed pipeline route parallels or crosses roads, trails, or prominent off-site observation points, and where the pipeline right-of-way may be seen by passing motorists or recreationalists. The duration of visual impacts will depend on the type of vegetation or land formation that is cleared or altered. The greatest potential visual impact will result from the removal of large specimen trees, which will take longer than other vegetation types to regenerate and will be prevented from reestablishing on the permanently maintained 50-foot-wide right-of-way. Topographic alterations such as sidehill cuts that may be

necessary to construct the pipeline will be restored during right-of-way restoration. The visibility of such alterations will diminish over time as the affected areas age and begin to blend with the surrounding landscape.

To minimize construction impacts on visual resources, Rockies Express aligned the proposed pipeline route, where feasible, adjacent to existing pipeline rights-of-way or other transportation corridors. This alignment will minimize impacts on visual sightlines and intrinsic value. In areas where right-of-way collocation is not possible for engineering and/or construction reasons, Rockies Express has attempted to align the pipeline to avoid aesthetic features to the extent possible, including large, mature trees.

8.4.2.2 Aboveground Facilities

Rockies Express proposes to construct compressor stations, meter stations, mainline valves, and pig launcher and receivers at various locations along the proposed pipeline route. These aboveground structures will be permanent and will remain in operation throughout the life of the pipeline. The impacts on visual resources from each individual facility will depend on the pre-construction condition and the visibility from the surrounding area.

The Arlington Compressor Station will be located in Phelps County, Nebraska at MP 237.0 of the REX-Entrega pipeline route. This compressor station is an expansion of Entrega's existing pig launcher and receiver facility. The compressor station is surrounded by rangeland with generally flat topography.

The Bertrand Compressor Station will be located in Carbon County, Wyoming at MP 286.8 along the REX-West pipeline route. This proposed compressor station site is surrounded by rangeland with generally flat topography.

The Mexico Compressor Station will be located at MP 0.0 along the proposed REX-East pipeline route in Audrain County, Missouri. This compressor station will have a pig launcher constructed at this location. The compressor station is surrounded by agricultural land located in eastern Missouri lowlands.

The Blue Mound Compressor Station will be located at MP 143.9 along the REX-East pipeline route in Christian County, Illinois, and will encompass a pig launcher and pig receiver constructed at this location. The compressor station is surrounded by agricultural land with generally flat topography.

The Bainbridge Compressor Station will be located at MP 279.0 in Putnam County, Indiana, and will encompass a pig launcher and pig receiver constructed at this location. The compressor station is surrounded by agricultural land with generally flat topography.

The Hamilton Compressor Station will be located at MP 432.0 in Butler County, Ohio, and will encompass a pig launcher and pig receiver constructed at this location. The compressor station is surrounded by agricultural and industrial land with rolling topography.

The Chandlersville Compressor Station will be located at MP 573.8 in Muskingum County, Ohio. This compressor station will have a pig receiver constructed at this location. The compressor station is located on agricultural land bounded by the Muskingum River to the west and U.S. Highway 60 and steep slopes to the east.

Each of the meter stations will be installed at locations with aesthetics and topography similar to that described for the pipeline and any nearby compressor station. Because of this, visual resources will not be significantly impacted from the construction and operation of the aboveground facilities. In general, the impacts on visual resources resulting from the construction and operation of the mainline valves will be minimal as each site will be less than 0.06 acre in size and will be operated within the pipeline right-of-way. Further, their locations will be remote and are not anticipated to be noticed by the general public.
