AFFIDAVIT

Compliance with Commission Rules and Service Standards

I am an officer of the applicant corporation, The Champaign Telephone Co., and am authorized to make this statement on its behalf. I attest that these tariffs comply with all applicable rules, including the Minimum Telephone Service Standards (MTSS) for the state of Ohio. I understand that tariff notification filings do not imply Commission approval and that the Commission's rules, including the Minimum Telephone Service Standards, as modified and clarified from time to time, supersede any contradictory provisions in our tariff. We will fully comply with the rules of the state of Ohio and understand that noncompliance can result in various penalties, including the suspension of our certificate to operate within the state of Ohio.

I declare under penalty of perjury that the foregoing is true and correct.

Section 10. INTEGRATED SERVICES DIGITAL NETWORK (ISDN) SERVICEINDIVIDUAL LINE BUSINESS AND RESIDENCE BASIC RATE INTERFACE (BRI)10.1 GENERAL

- 10.11 Integrated Services Digital Network (ISDN) describes the end-to-end digital telecommunications network architecture which provides for the simultaneous access, transmission, and switching of voice, data, and video services. These functions are provided via channelized transport facilities. The ISDN architecture consists of digital switching systems which connect Basic Rate Interface (BRI) lines to their serving central office. Caller ID - Number is included with this service.
- 10.12 BRI is an optional service arrangement which can be used in conjunction with a customer's Individual Line Business or Residence service. It uses the ISDN architecture to provide the customer with the capabilities of simultaneous access, transmission, and switching of voice, data, and video services via channelized transport. In addition, BRI provides the customer with access to Circuit Switched Voice Service and Circuit Switched Data Service.
- 10.13 A BRI arrangement obtains its capabilities from a properly equipped telephone company central office switch. The BRI arrangement may consist of up to two "B" channels and one "D" channel (2B+D).
- a. **"B" Channel:** The "B" Channel is a bi-directional synchronous channel capable of supporting 64 kilabit per second (kbps) of digital transmission of information between users. One Primary Directory Number with one Primary Directory Listing for the first "B" Channel ISDN Service line is provided. Additional listings may be provided as specified for Additional Listing Service in the Directory Listings section of this Company's tariff.
- b. **"D" Channel:** The "D" Channel is a 16 kbps digital signaling channel that carries signaling and control for the "B" channel.

Section 10. INTEGRATED SERVICES DIGITAL NETWORK (ISDN) SERVICE

INDIVIDUAL LINE BUSINESS AND RESIDENCE BASIC RATE INTERFACE (BRI)

10.1. GENERAL (Continued)

- 10.14 All ISDN Service lines consist of central office facilities, including the outside plant facilities, extended from the Company's switching equipment to the customer's demarcation point.
- 10.15. ISDN Service is provided at the option of the Company, and is furnished subject to central office switching capacity and the availability of outside plant facilities. The availability, functionality, and capabilities of the ISDN Service features may vary, or may not be available dependent upon type of serving central office switch, related software controlling that switch and associated outside plant.
- 10.16. The Company shall not be responsible if changes in any of the equipment, operations, or procedures of the Company utilized in the provision of ISDN Service render any facilities provided to the customer obsolete or require modification or alteration of such customer's equipment or systems, or otherwise affect its use or performance.

10.2 SERVICE DESCRIPTION

10.21. **CIRCUIT SWITCHING** - Circuit Switching is a switching technique in which an entire circuit or, in a digital switch equipped for ISDN, a specific selection of time slots is dedicated to a given call. Circuit Switched Service provides the ability to originate and receive circuit switched data calls over a 64 kbps "B" channel. The customer may choose among the following Circuit Switched features based upon application needs.

- a. **Electronic Key Telephone Service (EKTS) Features:** Electronic Key Features provide the customer with the ability to access the following features where available:

Section 10. INTEGRATED SERVICES DIGITAL NETWORK (ISDN) SERVICE

INDIVIDUAL LINE BUSINESS AND RESIDENCE BASIC RATE INTERFACE (BRI)

10.1 GENERAL

Effective July 10, 2007, ISDN-BRI service will be no longer offered to new customers. The service offering will be “grandfathered”, i.e., continued to be made available to those customers already receiving the service. Please contact the Customer Service department to discuss alternative forms of service. (N)

10.11 Integrated Services Digital Network (ISDN) describes the end-to-end digital telecommunications network architecture which provides for the simultaneous access, transmission, and switching of voice, data, and video services. These functions are provided via channelized transport facilities. The ISDN architecture consists of digital switching systems which connect Basic Rate Interface (BRI) lines to their serving central office. Caller ID – Number is included with this service.

10.12 BRI is an optional service arrangement which can be used in conjunction with a customer’s individual Line Business or Residence service. It uses the ISDN architecture to provide the customer with the capabilities of simultaneous access, transmission, and switching of voice, data, and video services via channelized transport. In addition, BRI provides the customer with access to Circuit Switched Voice Service and Circuit Switched Data Service.

10.13 A BRI arrangement obtains its capabilities from a properly equipped telephone company central office switch. The BRI arrangement may consist of up to two “B” channels and one “D” channel (2B+D).

- a. **“B” Channel:** The “B” Channel is a bi-directional synchronous channel capable of supporting 64 kilobit per second (kbps) of digital transmission of information between users. One Primary Directory Number with one Primary Directory Listing for the first “B” Channel ISDN Service line is provided. Additional listings may be provided as specified for Additional Listing Service in the Directory Listings section of this Company’s tariff.
- b. **“D” Channel:** The “D” Channel is a 16 kbps digital signaling channel that carries signaling and control for the “B” channel.

Section 10. INTEGRATED SERVICES DIGITAL NETWORK (ISDN) SERVICE

INDIVIDUAL LINE BUSINESS AND RESIDENCE BASIC RATE INTERFACE

10.1 GENERAL (Continued)

- 10.14 All ISDN Service lines consist of central office facilities, including the outside plant facilities, extended from the Company's switching equipment to the customer's demarcation point.
- 10.15 ISDN Service is provided at the option of the Company, and is furnished subject to central office switching capacity and the availability of outside plant facilities. The availability, functionality, and capabilities of the ISDN Service features may vary, or may not be available dependent upon type of serving central office switch, related software controlling that switch and associated outside plant.
- 10.16 The Company shall not be responsible if changes in any of the equipment, operations, or procedures of the Company utilized in the provision of ISDN Service render any facilities provided to the customer obsolete or require modification or alteration of such customer's equipment or systems, or otherwise affect its use or performance.

10.2 SERVICE DESCRIPTION

Effective July 10, 2007, ISDN-BRI service will be no longer offered to new customers. The service offering will be "grandfathered", i.e., continued to be made available to those customers already receiving the service. Please contact the Customer Service department to discuss alternative forms of service. (N)

- 10.21 **CIRCUIT SWITCHING** – Circuit Switching is a switching technique in which an entire circuit or, in a digital switch equipped for ISDN, a specific selection of time slots is dedicated to a given call. Circuit Switched Service provides the ability to originate and receive circuit switched data calls over a 64 kbps "B" channel. The customer may choose among the following Circuit Switched features based upon application needs.

- a. **Electronic Key Telephone Service (EKTS) Features:** Electronic Key Features provide the customer with the ability to access the following features where available:

EXHIBIT C

The Champaign Telephone Company, with this tariff revision, will grandfather Integrated Services Digital Network (ISDN) Basic Rate Interface (BRI) service.

Presently, The Champaign Telephone Company has 10 subscribers to this service. No new customers have subscribed to this service during the past 2 years. Broadband internet with the firewalls available, and the newer technology deployed, has significantly reduced the need for ISDN-BRI service.

During the past year, The Champaign Telephone Company replaced its DMS 100 switch with a new MetaSwitch. The costs to migrate the customers to the new switch were extremely high (in excess of \$500. per customer). Additionally, the features listed in the present tariff have been severely limited, and in many situations, are no longer available under the operational software of the new MetaSwitch. Due to the changes in technology, and the alternatives available, e.g. higher internet transmission speeds with better security through improved firewalls, the service is no longer in demand.

The Champaign Telephone Company proposes to grandfather this service to its existing customers effective with the filing of this tariff revision, and to no longer offer it to new customers who may inquire about the service.

EXHIBIT D

Customer Notification

Since only 10 customers have ISDN-BRI service, The Champaign Telephone Company will tell these “grandfathered” customers upon request to disconnect their service that they will not be able to reconnect at another time. Similarly, if the customer calls to make changes, they will be informed that they cannot do so. Instead, a customer service representative will inform the customers of alternative services available, such as higher speed internet, with improved security features and any other technologically advanced products which can be used in place of this service.
