YEAR 2007

DUKE ENERGY DUKE ENERGY OHIO SUMMARY OF MANAGEMENT POLICIES, PRACTICES AND ORGANIZATION CUSTOMER SERVICE

SFR Reference: Chapter II (B)(9)(d)(i,ii,iv,v)

I. Policy and Goal Setting

Customer Service supports the corporate policies and objectives as described in the Working Environment Policy Manual through the Department directives, procedures and practices. In addition, policies defined by the Federal Energy Regulatory Commission (FERC) and the Code of Business Ethics (COBE), are supported and followed within the Customer Service organization.

Policy making also occurs at the department level primarily through the Business Standards and Integration (BS&I) group. This group was formed in April, 2006 after the Duke Energy — Cinergy merger, to simplify existing processes and to maximize the effectiveness of Customer Service's systems and resources.

The BS&I team gathers input from all areas of Customer Service and also works with key stakeholders outside of Customer Service such as Gas Operations, Meter Operations, Meter Reading, Service Delivery, Customer Strategy and Electric Operations. The BS&I team works cohesively to establish policies and procedures that make the Customer Service business more efficient and cost effective.

Departmental policies are communicated to the management team at department staff meetings. The Management team then communicates these policies to their staff that in turn communicate the policies, where appropriate, to individual staff members. Department policies are often reviewed by supervisors and the work force in small group meetings. The purpose of the meetings is to ensure there is an understanding of the policies and their importance in relation to serving the customer.

Goal Setting

Annual and long-range goals and objectives are established by executive management and are embodied in the US Franchised Electric & Gas business plan. The senior vice president of Customer Service meets with the Customer Service management team to establish a business plan that supports the goals of the US Franchised Electric & Gas. Attached as Exhibit CUC-2, is an excerpt from the 2007 Customer Service Business Plan. The Customer Service management team is responsible to then develop business plans for their specific department, which supports the overall Customer Service plan. Non-union

employees are compensated according to the results of these goals combined with the results of Customer Satisfaction surveys, how well we did on achieving our major Customer Service initiatives, and overall performance of the Company as determined by earnings per share.

The Customer Service management team reviews the progress of the business plan and objectives monthly. The senior vice president of Customer Service also reviews progress against these goals with senior management on an as-needed basis relative to the importance of the goals/objectives in supporting the Company's objectives.

Some of the criteria used in the Customer Service Department's goal/objective setting process are:

- The goals must support and foster the corporate charter to create superior and sustainable value for our customers, employees, communities and investors through the production, delivery and sale of energy and energy services;
- While working to achieve our goals and objectives, we remain focused on our values of stewardship, integrity, safety, respect for the individual, high performance, and win-win-relationships;
- · Appropriate targets and measurements must be developed;
- Goals/objectives must relate to company initiatives and be cost-effective; and
- Goals/objectives must effectively serve both external and internal customers.

Within our Call Center, our representatives are eligible for an incentive payment on a quarterly basis, based on individual performance. Individuals are measured on components such as call quality, adherence to schedule and availability. In addition, management incentive plans also include customer satisfaction goals and objectives.

II. Strategic Planning

To determine short and long-term strategy, the Customer Service leadership team reviews corporate objectives, customer feedback and employee feedback. The business plan includes initiatives that are to be accomplished over an 18 to 24 month time period. The business plan includes action steps to achieve the initiatives as well as milestones and timelines.

An example of Strategic Planning is our current technology plan, which details various technology enhancements that will take place in 2007 and 2008. These enhancements are designed to serve our customers more efficiently and cost effectively while providing our customers with added convenience. This list of enhancements includes the implementation of an Energy Data Management System, which will provide a single repository for all of our meter data and

supports the building of an advanced metering infrastructure. This system will enable us to transform our business processes related to meter data, and it will facilitate future merger transitions.

Within our call center, we have continued to make a number of technological improvements within the past couple of years. Our Automated Phone System enables customers to perform a number of self-service options such as, report an outage, Budget Billing setup and remove, BillPayer 2000 setup and remove, check the amount due and due date, verify amount and date of last payment, pay by phone, confirm amount and due date to prevent disconnection for nonpayment, Fixed Bill enrollment, EZRead enrollment, enter gas and/or electric meter readings, update phone number in the billing system and make payment arrangements. Screen Pop is another feature that enables the customer service representatives to assist the customer more efficiently by automatically accessing the customer's account whenever the telephone number that the customer is calling from, matches the telephone number we have in our billing system. To help ensure accessibility during storms, we have contracted with Twenty-First Century Communications to augment our self-serve options of reporting outages. These features also provide information to the customer as it pertains to their outage such as, estimated restoration time/date, first outage call received time/date and the cause of the outage.

We have also introduced a number of self-service applications via our website at www.duke-energy.com. Customers can register for our Online Services and perform transactions, such as report an outage, view and pay bill online, check the amount and due date of current bill, access billing, payment and usage history, enroll in our Budget Billing Program, request service to be turned on or off, report electric trouble, utilize the Home Energy Calculator, submit meter reads and view meter reading schedules. Customers can also read important messages posted online about events as they are happening through our status messaging tool.

Other strategic planning is guided by the results of our customer satisfaction surveys. As customer data is analyzed, the results are forwarded to appropriate departments and management. Based on the results, recommendations and decisions are made and factored into our strategic planning.

III. Organizational Structure

Customer Service is headed by a senior vice president who reports to the Group Executive, President and Chief Operating Officer, US Franchised Electric & Gas. The department is divided into six areas: Call Center Operations, Customer Service Platforms, Revenue Services, Energy Data Management, Business Standards & Integration, and Customer Service Support. All six areas are headed by a vice president/general manager/director who reports directly to the senior vice president. Organizational charts are attached below as Exhibit CUC-1.

IV. Responsibilities

The major responsibilities of Customer Service include the following:

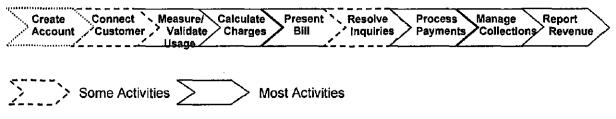

Customer Contacts

Customer Service has general responsibility for handling customer contacts by telephone and e-mail for residential and small business customers related to a wide variety of billing and service matters, complaints, adjustments, and gas and electric trouble calls. Also, telephone calls from builders and contractors regarding preliminary gas and/or electric service matters such as inspections, new meter installations, etc., are handled by Customer Service.

Customer Service also manages our customer service offices, where customers can walk in and make a payment, make payment arrangements, or discuss any billing matter with one of our customer service representatives. We also manage Pay Agents where customers can also make payments at a local retailer that typically offers extended hours of operation. In addition we have the responsibility to maintain and update all customer related web content on the Company's website as well as functionality for Online Services.

Revenue Services

In general, the Revenue Services area performs most of the functions in the Company's retail revenue process. As depicted in the following diagram, once customer accounts are created, Revenue Services performs most of the activities related to preparing the customers' bills, processing payments, managing collections and reporting revenue.

Billing

- Render timely and accurate bills;
- Resolve usage/billing exceptions accurately and timely;
- Support other departments with billing information necessary to aid in resolving customer inquires;
- Investigate billing problems and initiate billing in cases of un-metered or miscalculated gas/electric usage;
- Provide operational support for billing; and
- Maintain proper controls to ensure all accounts are billed as scheduled.

Credit & Collections

- Establish and implement credit and collection policies, in compliance with state regulatory requirements;
- Take action on past-due accounts (primarily residential);
- Investigate, and initiate billing and collection actions, in cases of fraud and meter tampering;
- Administer Percentage of Income Payment Plan, medical certification and life support programs; and
- Initiate account adjustments, claim filings, and collection efforts, if any, for customer bankruptcy filings.

Payments

- Apply payments to customer accounts in a timely manner;
- Validate system controls are operating appropriately and effectively;
- Administer, apply, and collect agency payments (Vouchers, PIPP Intents, etc);
- Provide Operational support for Payment related questions; and
- Maintain proper account records and controls to assure the integrity of reported gas and electric usage and revenue and accounts receivable balance.

Certified Supplier Business Center

- Manage the business relationships with gas and electric suppliers participating in Duke Energy Ohio's Customer Choice programs;
- Execute Customer Choice back-office operations; and
- Create and implement Customer Choice business processes and support other departments by providing Customer Choice information.

Regulatory Reporting and Complaint Resolution

Customer Service also works with the PUCO and Ohio Consumers' Counsel (OCC) to provide required reports such as the OSCAR report (detailed 96 column report regarding PIPP accounts, number of disconnects, number of reconnects, and more) and other reports upon request. This group also handles escalated complaint calls that are referred by the call center, the PUCO and OCC for resolution.

Customer Satisfaction

Customer Service works with the Customer Strategy Department to manage customer satisfaction surveys and to mine the data and determine customer improvement initiatives. Surveys include customer contact surveys for residential customers, new service installations, e-mail requests, Online Services, and e-Bill.

Energy Data Management

Customer Service has a dedicated group responsible for establishing and implementing an Energy Data Management System (EDMS). This system will provide a single repository for all of our meter data and will support the building

of an advanced metering infrastructure. Once implemented, this system will streamline the validation, estimation and exception process as well as remove complexity of meter device issues from downstream systems. In addition, the EDMS will provide scalability by providing economical support for meter data, processing and storage for 14,000,000 customers (19,000,000 meters) with incremental additions based on future mergers. It will provide flexibility by having automated processing of standard business rules for validation, editing, and estimating and aggregation and billing determinant calculations. It will provide simplification by providing consistent normalization of data, consistent and early exception management, and isolate complexity of meter infrastructure management issues from the Customer Information System and other systems. We expect to implement the EDMS to the Business and Industrial customers by mid-2007 and to the mass market by early 2008.

Customer Service Platforms

Customer Service is also responsible for continually evaluating our systems and technologies used throughout Customer Service, to ensure that we have the right systems and tools in place to run the business efficiently and cost-effective, both now and in the future. We have a group dedicated to working with key stakeholders throughout the organization to identify "pain points" (what's not working or what's causing breakdowns in business processes, etc.), and to research and evaluate what technology is needed to improve our business processes across the organization. This group is strategic in their approach to ensure that the most cost-effective measures are taken, and that technologies are scalable for future growth.

V. Practices & Procedures

Customer Service develops its operating procedures with supporting input from the various departments with which the department has close interaction. These interacting departments include Meter Operations, Regulatory Compliance, Legal Department, Corporate Communications, Information Technology, Gas Operations, Meter Reading, Communication Strategy & Energy Efficiency, etc.

Customer Service provides staff support for department-related projects that are developed on a corporate-wide basis. The conversion of our Customer Management System (CMS) is a good example of this. We also have a cross-functional Customer Satisfaction Council, focused solely on evaluating results of customer satisfaction and determining recommendations for improvement.

Operational guidelines are provided for use by the office and field work forces. Day-to-day operational decisions are made by the respective vice presidents/general managers/directors or senior vice presidents, as these decisions affect normal division operations. Unusual problems and events are discussed with the department senior vice president and affected vice president/general managers/directors. The vice president keeps the US Franchised Electric & Gas president informed of

significant events that could affect the overall operation of the department in a material way.

VI. <u>Decision Making and Controls</u>

At monthly staff meetings held by the senior vice president with the vice presidents/general managers/directors, recent developments internal and external to the department are discussed and reviewed. Where appropriate, decisions are made which will enhance overall department operations.

The vice presidents/general managers/directors in turn have staff meetings with their employees as needed. Any decisions that affect the work force are discussed with the employees in small group meetings, and feedback is solicited and received.

Day-to-day decisions, as they pertain to the various jobs in Customer Service, are normally made by the employees performing the jobs. Certain guidelines are in place to assist employees in decision making. These guidelines are communicated to employees through online or printed training manuals and departmental procedures. Each employee's work is monitored by supervision to make sure decisions are consistent with policies and procedures.

Major decisions, such as the need to work overtime for a large number of employees, are made by supervisors, with the approval of the department manager. Information regarding especially significant decisions is forwarded to the senior vice president and the US Franchised Electric & Gas president in weekly or bi-weekly reports.

Specifically, the need for overtime in the call center is evaluated by workforce management. The dollars needed for planned overtime are tracked on a weekly basis and compared to the budget dollars for overtime. Workforce management approves overtime up to the budget amount. If the need for overtime exceeds our budget dollars for the week, a manager must approve the overtime.

The following are examples of controls that are in place to assist the department supervisory staff in their efforts of determining that the various systems and procedures are functioning properly:

- The Call Center telephone system has the capability of generating reports that enable management to tabulate each customer representative's activities on the telephone. In addition, supervisors of the Call Center are able to measure group productivity and effectiveness with this data;
- Another example of a control is the level of authority that various employees have when making a monetary adjustment to a customer's account. An employee must have documented approval from his/her supervisor to make an adjustment that is beyond the employee's authority;

- Further internal program controls exist involving certain billing adjustments, which are processed in the Customer Management System (CMS). These controls consist of the blocking out of entries by unauthorized employees;
- Customer and meter movement orders not processed within three working days from receipt in the Work Order group are given a high priority to follow-up; and
- Service Delivery monitors response time for Gas and Electric Trouble calls
 to ensure that we are responding in the appropriate amount of time. In
 addition, they measure the number of turn-on and turn-offs taken and the
 number worked. If there are any discrepancies or red flags in any of these
 reports, the necessary action is taken to correct the situation.

In addition, the installations of various internal electronic systems have enabled the department to develop better measurement of performance of our work force, as well as to utilize the system for training purposes in a more effective manner.

As mentioned in an earlier section, when appropriate, participatory management is being used in decision making processes. Recommendations from teams generally include control provisions, which are implemented, if approved, by departmental management.

VII. Internal and External Communication

Customer Service communicates internally with employees through meetings, email, the Portal, This Week @ Duke Energy Newsletter, Duke Energy Ohio & Kentucky Weekly, and written procedures. In addition, bulletin boards are strategically located throughout the department. Periodically the president and/or senior vice president and vice presidents/general managers/directors will hold employee meetings to give employees the opportunity to voice their concerns and opinions. Lines of communication exist through various project teams and the Business Standardization & Integration group, which is used to resolve problems and encourage teamwork and cooperation across departments.

External communication occurs through a variety of channels including the following:

- Letters to customers;
- Bill messages;
- Bill inserts;
- Attendance at public hearings and meetings;
- Presentations at community meetings, agencies, rotary clubs, city council;
- Volunteer work in the community;
- Membership in professional and civic organizations;
- In-person at our customer service offices;
- E-Mail:
- Web site;
- Automated Phone Service:

- Telephone contact; and
- Contact with regulators and other agencies at our Ohio Collaborative meetings.

VIII. Goal Attainment and Qualification

Customer Service uses various statistical reports as a means of measuring operational effectiveness of the department. Some of the reports serve the dual purpose of measuring goal attainment as well as being control devices. Many of our process improvement initiatives are driven by the results of our customer satisfaction surveys as we analyze what customers are telling us in our various surveys:

Residential Customer Contact Survey

Customer Satisfaction is measured on a regular basis. Surveys are sent to residential customers that had a recent service contact. The surveys are mailed weekly by an independent research firm and measure satisfaction with 5 key processes. The surveys measure overall satisfaction using the following scale: Very Satisfied, Satisfied, Neither Satisfied nor Dissatisfied, Dissatisfied, and Very Dissatisfied.

New Service Installation Survey

Satisfaction with installation of new gas and electric service is measured on a regular basis at Duke Energy. Surveys are sent to builders, developers and/or customers that request new gas and/or electric service be installed. The surveys are mailed every week by an independent research firm and measure satisfaction with this key process for all customers. The surveys measure overall satisfaction using the following scale: Very Satisfied, Satisfied, Neither Satisfied nor Dissatisfied, Dissatisfied, Very Dissatisfied.

Online Services Survey

Duke Energy measures satisfaction of those customers that choose to conduct their business through the Company's Online Services. This web-based program allows customers to view and pay their energy bill online, enroll in Budget Billing, turn on/off service, submit meter reads, obtain billing and usage history. Overall customer satisfaction is measured using the following scale: Very Satisfied, Satisfied, Neither Satisfied nor Dissatisfied, Dissatisfied, and Very Dissatisfied.

E-mail Survey

The survey measures satisfaction for those customers that choose to contact Duke Energy through e-mail. Surveys are sent to residential customers that had a recent service contact. A link to an online survey is included with the final communication from the call center representative to the customer. The survey measures overall satisfaction using the following scale: Very Satisfied, Satisfied, Neither Satisfied nor Dissatisfied, Dissatisfied, and Very Dissatisfied.

J.D. Power and Associates Studies

J.D. Power and Associates, a firm well known for assessing the state of customer opinion and customer satisfaction in many key industries, performs annual studies of electric utilities' residential and business customer satisfaction. In addition, J.D. Power performs an annual study on gas distribution residential customer satisfaction. Duke Energy Ohio participates in each of these annual studies, and the satisfaction results indicate that Duke Energy Ohio is doing a very good job of consistently providing high-quality customer service.

The J.D. Power residential electric customer study, established in 1999, calculates overall customer satisfaction based on six performance areas: (1) company image; (2) price and value; (3) power quality and reliability; (4) billing and payment; (5) customer service and added in 2006, 6) communications. For the year 2006, the J.D. Power and Associates study measured customer satisfaction for the largest 76 electric utility holding companies in the nation, that serve over 92.8 million residential customers.

For 2006, the most recent residential customer study, Duke Energy Ohio outperformed the Midwest region average for customer service.

The gas study, implemented in 2002 measures customer satisfaction based on six performance areas which are: 1) Company Image; 2) Price & Value; 3) Billing & Payment; 4) Customer Service; 5) Field Service; and added in 2006, 6) Communications. The 2006 study measured satisfaction from customers of the 56 largest local gas distribution that serve between 49 million residential customers.

In the five years that the J.D. Power residential gas study has been conducted, Duke Energy Ohio's scores in overall satisfaction have outperformed the scores of the Midwest region average on company image, price & value, billing & payment, and customer service.

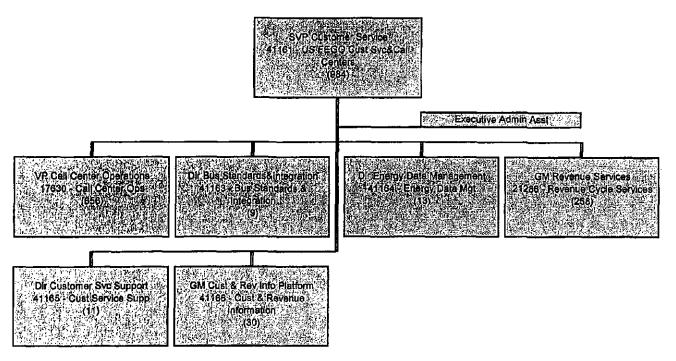

The following are some other examples of statistical reports within the department that are used to quantify the effectiveness of Customer Service activities:

- Residential Customer Contact Surveys; (attached Exhibit CUC-3)
- New Service Installation Surveys; (attached Exhibit CUC-4)
- Online Services Survey; (attached Exhibit CUC-5)
- E-Mail Survey; (attached Exhibit CUC-6)
- All Complaints & Inquiries Received by Customer Service Support 2006; (attached Exhibit CUC-7)
- Complaints Received from the PUCO 2006; (attached Exhibit CUC-8)
- Complaint Resolution Time 2006; (attached Exhibit CUC-9)
- Call Center Coaching Form; (attached Exhibit CUC-10)
- Midwest Contact Channels Report; (attached Exhibit CUC-11)
- New Service Contact Center Stats; (attached Exhibit CUC-12)
- Call Profile ½ Hour Report; (attached Exhibit CUC-13)

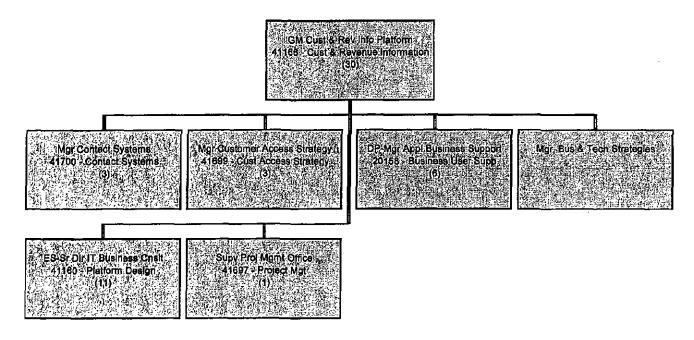

- Availability Report; (attached Exhibit CUC-14) and
- OSCAR Report (attached Exhibit CUC-15).

The vice president of Customer Service meets with the respective general managers/directors on a monthly basis for the purposes of providing information and receiving input on the current status of progress toward obtaining the goals of the department. The general managers/directors hold similar meetings with their respective supervisors.

To Our Valued Customer:

Installing new services for our customers is one of the most important things we do at Duke Energy. We recently completed a new service installation project for you, and we want your feedback. Our goal is to improve the new service installation process, and your input is extremely valuable.

Please take a few minutes to complete this survey on your recent new service installation project with Duke Energy. The location of the new service we installed for you is printed beneath your name and address for your reference when completing the survey. A postage-paid envelope is enclosed for returning the survey.

(If you are not the person most familiar with Duke Energy's performance on this project, please forward this survey to the appropriate individual in your organization.)

Thank you for completing the survey. Your opinions are very important to us.

If you have any questions about the survey, please contact John Kappesser at (513) 287-1774.

Sincerely,

John Kappesser

Customer Satisfaction Manager

To our Valued Customer:

As a builder or developer, you are an important Duke Energy customer. We value your input in Duke Energy's ongoing quality improvement process. The information you provide will help us to serve you better in the future. Please take a few minutes to complete this survey on your recent New Service Installation Project With Duke Energy, and return the survey in the postage-paid envelope.

Thank you for your help.

### DUKE ENERGY DUKE ENERGY OHIO

### SUMMARY OF MANAGEMENT POLICIES, PRACTICES AND ORGANIZATION GAS ENGINEERING

SFR Reference: Chapter II(B)(9)(a)(i,ii,viii,ix), Chapter II (B)(9)(e)(vii)

### I. Policy and Goal Setting

Gas Engineering supports the corporate policies and objectives through department directives, procedures and practices.

The goals of Gas Engineering are designed to support the business plans of Gas Operations and the US Franchised Electric & Gas (US Franchised E&G). Refer to Exhibits CGO-2 and CGO-3 for copies of the goals and objectives for Gas Operations.

Annually, the General Manager of Gas Engineering meets with the supervisory staff of Gas Engineering to develop a work plan to support the business plans of Gas Operations and the US Franchised E&G. Through a participative process, individual and team goals are developed. These goals are provided to the Senior Vice President of Gas Operations for incorporation into the US Franchised E&G's business plan.

Gas Engineering goals are published to make all employees aware of the department expectations. To assure continuous attention to the team and individual goals, departmental goals become part of the annual key performance appraisal process for department employees.

The General Manager, Manager and the supervisors of Gas Engineering periodically review goals. Staff meetings are held regularly, to review progress of work plans. When problems are identified, corrective actions are established and target deadlines are set.

Gas Engineering, in conjunction with the other operating areas of Gas Operations, including the Senior Vice President, are responsible for the development of practices, policies and procedures for the installation, operation and maintenance of gas facilities. These practices, policies and procedures are reported in the Gas Operations Standards Manual for Design, Construction, System Operations and Maintenance.

Gas Engineering is responsible for maintaining, revising and updating the Gas Operations Standards Manual for Design, Construction, System Operations and

Maintenance. This includes keeping all employees within Gas Operations informed of all changes in policies, practices and procedures.

Contractor Construction Management is responsible for the inspection and supervision of gas facility installation, replacement and street improvement projects that are completed by contractor workforces.

### II. Strategic Planning

Strategic planning is accomplished at the officer level and is used to develop the US Franchised E&G business plan. The goal and budgeting processes support strategic direction, as follows:

- A strategic plan has been developed for Gas Operations. Gas Engineering is involved as part of the planning team, as well as during implementation;
- Gas Engineering performs gas system analysis and planning of the physical gas system to maintain reliability and provide capacity to serve future customers and changing gas delivery requirements;
- Gas Engineering assists in the staffing and training of new employees and on-going development of personnel to provide safe, reliable and economic service to our customers and maintain the integrity of the system; and
- Gas Engineering identifies, develops and implements new methods and equipment to perform the job better in the future.

Gas Engineering supports the US Franchised E&G business plan through its goals and budgeting processes, as follows:

### **Budgeting**

Gas Engineering, Gas Commercial Operations, Gas Performance Support, and the Gas Construction & Maintenance Management Department jointly develop a Construction Budget for all of Gas Operations. The budget is reviewed monthly and variances are addressed. Blanket budgets are reviewed monthly and midyear for necessary adjustments. The total Construction Budget may be increased by way of non-contemplated items, if approved by the Senior Vice President of Gas Operations, or decreased by scheduling changes.

An operating and maintenance budget is developed solely for costs incurred by Gas Engineering. This budget is further separated into five (5) sub-departments so the expenses of each division within the department may be better analyzed. Also, labor, material and expenses are broken down within each sub-department account. Variance Reports are prepared on a monthly basis for each department.

### **Maintenance**

Gas Engineering's planning and budgeting activities are aimed at keeping the existing gas system in a safe and reliable condition and extending it to meet present and future energy competition. Evaluation programs have been developed to choose the highest priority segments or pipe for replacement on a year-to-year basis.

### **Development and Training**

A strong, continuous effort is maintained to train and develop personnel. The demands on technical expertise and information systems are accelerating. Gas Engineering's personnel must obtain the knowledge and resources to keep pace. Gas Engineering's hiring practices are important as a foundation, but we concentrate on development continually. Training is obtained through attendance at seminars, on the job training and rotation to other Gas Operating areas.

### III. Organizational Structure

The Gas Engineering Department is headed by a General Manager who reports to the Senior Vice President of Gas Operations. Gas Engineering is organized into five (5) sections:

- Distribution Engineering Pipeline Design and Major Projects;
- Systems Engineering;
- Drafting & Mapping Resources;
- Corrosion Engineering and Control; and
- Contractor Construction Management

An organization chart of Gas Engineering is provided in Exhibit GE-1.

### IV. Responsibilities

The primary responsibilities of Gas Engineering are to provide engineering services, maps and records for Gas Operations to ensure system reliability management of contractor workforce and compliance with all federal, state, county, city and municipal codes, rules and regulations. In addition, Gas Engineering is responsible for planning, developing and maintaining long range planning objectives and goals for the Gas Distribution System as follows:

Provides the staff support and engineering input for the Gas Operations in connection with the delivery of gas to new customers. In addition, Gas Engineering provides support and input to the Gas Construction & Maintenance Management Department in connection with the installation of gas pipelines and other associated gas facilities necessary to serve new customers and expand the distribution of gas to new areas;

- Responsibility for the inspection and supervision of gas facility installation, replacement and street improvement projects that are completed by contractor workforces;
- Responsible for the retention of maps, records and other documents relating to the installed gas facilities, with input from Gas Commercial Operations, Gas Construction & Maintenance Management Department, Capital Accounting, Legal, Information Technology and Customer Relations Departments;
- Responsible for maintaining the records required for the coordination of all federal, state and local obligatory programs, provides contract administration services for Gas Construction & Maintenance Management Department for pipeline and various maintenance contracts. The majority of contracts are competitively bid on a unit cost basis;
- Responsible for the evaluation, selection and use of gas construction materials, excluding procurement and storage;
- Provides system analysis and design to optimize system design consistent with efficient, safe, reliable, economical and adequate operations;
- Provides expertise and guidance to Gas Operations as requested to achieve and sustain compliance with all applicable regulations, rules and codes;
- Provides plans, engineering design and administrative services for the construction, operation, maintenance, and records of the gas system;
- Prepares and maintains maps, drawings and other records of gas facilities;
- Develops and coordinates construction standards and procedures for Gas Operations, including standardization of materials;
- Determines and preserves the physical condition of the gas system and develops control programs to mitigate or reduce system deterioration;
- Processes and coordinates, in a timely manner, work orders, special billings, and other procedures necessary to the installation of customer facilities; and
- Provides expertise and administers the cathodic protection program, including the Integrity Management Program and compliance associated with the cathodic protection program for the system.

### V. Practices and Procedures

This department has direct responsibilities in all areas relating to gas systems design, planning, engineering, contractor construction management and system records activities including such duties as the following:

- Gas systems planning and gas systems improvements;
- Inspection and supervision of gas facility installation, replacement and street improvement projects that are completed by contractor workforces;
- Budgeting and cost estimating for decision analysis and construction;
- Protection of facilities and providing documentation for the protection of these facilities;

- Designing and programming Supervisory Control and Data Acquisition Systems (SCADA);
- Analyzing pipe network pressure and flow;
- Engineering the design of distribution regulation and control, customer regulating and measuring facilities, and purchase city gate stations;
- Preparing gas operation standards, procedures and guidelines;
- Preparing and administering programs for procuring contractor service and assistance;
- Developing and maintaining computer record systems, computer assisted drafting and engineering systems;
- Maintaining record storage and retrieval systems and providing access to system records;
- Coordinating construction projects with governmental and private agencies;
- · Coordinating cathodic protection activities and design; and
- Coordinating the Integrity Management Program.

Gas Engineering is supported by the Customer Management System (CMS) in connection with service order processing and meter and other customer information. This system also provides valuable information necessary for efficient gas system planning.

Capital Accounting provides original cost records and pipeline inventory records. Legal assistance is provided by the Legal Department on an "as required" basis.

Data processing is provided by the Information Technology Department in connection with the Gas Operations Job Control and Gas Pipeline Condition Reporting programs. These and other ongoing programs, including the Gas Operations Work Management System, provide essential data for main replacement, budgeting, job status reporting and actual cost information.

Policies and procedures are established by each of the various operating divisions of Gas Engineering with input from Gas Construction & Maintenance Management Department and Gas Commercial Operations. Day-to-day operations and job control decisions are made by the appropriate job sponsors on a timely basis. Job sponsors are first line decision makers for engineering and customer problems or questions. Complex problems are referred to the appropriate Manager or Supervisor and then to the General Manager of Engineering.

Gas Engineering maintains Gas Operations Policies and Procedures essential for the design, maintenance and operation of the gas distribution system. These policies and procedures provide support to employees engaged in engineering, drafting and record maintenance activities.

### VI. Decision Making and Control

Decisions are made at the lowest level consistent with impact and authority (i.e., if a decision were to impact only a group of clerical personnel, the supervisor of that group would make the decision and communicate with his/her superior as appropriate). Decisions with broad impact may be made at lower levels after discussion and approval at the overall impact level. The responsibility for compliance rests with the supervisory level that makes the decision. Communications and discussions concerning decisions which have been made are held with higher levels of supervision as needed. Normally this is an advisory process rather than a directive.

Intra-department decisions are made and discussed at levels appropriate to their impact. A decision that impacts only one section would be discussed with the manager if it is long range or a break from past practice.

Any decision that impacts a segment of the Company broader than Gas Engineering is discussed with appropriate management personnel. Depending on the type of decision and the degree of impact, this discussion would range from keeping management informed to getting formal approval.

### VII. Internal and External Communication

Internal communication among the staff and management is frequent and convenient during daily activity. Conducive to the communication process is the fact that most personnel are in one location, spending the majority of their time in the same office area.

Internal communications consist of information and problem solving meetings regularly held for each division of Gas Engineering between the supervisor and staff and between the General Manager and supervisors. Other internal meetings on a project level are coordinated on an "as required" basis by job sponsors and designers with appropriate Gas Construction & Maintenance Management Department divisions and Gas Commercial Operations.

External communications consist of communicating and attending meetings with other utilities and agencies, such as the following:

- State, city and county engineers;
- Engineers, architects and local planners;
- National and state gas utility associations; and
- Professional organizations.

Written communications, including minutes of meetings, memos, letters, and specific procedures are a necessary follow-up for both internal and external communications.

# VIII. Goal Attainment and Qualification

Engineering performance controlling processes are established by the special needs and engineering details of each project. Project need dates are translated into engineering completion target dates at the time that the project is received by the department. Goal attainment is quantified by establishing standards that meet, exceed or is exceptional performance for each goal/objective within a department, team or individual. Each goal is weighed as to its relative importance. Review periods are established between a subordinate and supervisor; this period is established based on the business needs. A large portion of the employee performance management system is goal accomplishment.

Need dates for projects relating to governmental agencies requiring new, relocated or replaced pipelines are furnished by the appropriate governmental sources.

Need dates for projects relating to internal construction budgets and improvements are established by special departmental sources and are generally targeted for "issue" for construction during or shortly after the first quarter of the year, to ensure completion prior to the next heating season.

Engineering completion target dates are formulated and projects are prioritized so that construction completion meets the requirements of the customers and/or governmental agencies. Where unavoidable delays are identified, the project sponsor will advise the appropriate division and/or the appropriate governmental agency. Progress is continuously monitored by the appropriate supervisor and individual job sponsors using computerized edits and checks.

Drafting, mapping, records updates and other staff engineering are continuously monitored by the Supervisor of Drafting & Mapping Resources using various manual and computerized reviews, edits and checks. These include processing of work orders for mains and services, permit requests, facility plotting, drafting, mapping, record updates and issuance of construction projects.

Performance indicator criterions are formulated by the appropriate supervisor to meet the special needs of the division and employees.

Each sponsor is responsible for evaluating progress, identifying problems, updating customer sources and scheduling their time to make necessary corrections or revising the target completion dates.

The complexity and special engineering needs of each project do not readily permit establishing standard times or specific performance parameters because most projects are unique. Engineering projects are classified into general categories as follows:

- New main extensions to serve new customers or new areas;
- Pipeline replacements for condition or service improvements;
- Customer meters, regulators and distribution systems;
- Replacements due to governmental street and roadway improvements;
- System Improvements (Pressure, Meter-Regulator);
- · Feeder mains to supply new areas; and
- Gas plants and gas processing equipment.

The required time allocated for the completion of a project within each category varies. Each project is monitored from the date of assignment by a job sponsor to the date of installation completion by the construction force.

Weekly reporting of project status, with constant monitoring of progress toward a target date goal, together with monitoring the needs of a customer source, enables the supervisor and/or their job sponsors to prioritize projects, identify problems, schedule resources and make effective target date adjustments.

Listed below are examples of performance measurement reports utilized by the department, with reference numbers for attached samples.

# 2007 Ohio/Kentucky Gas Operations Objectives

# 1.) Meet 2007 Financial Targets

- Meet targets for Gas Ops Non-AMRP O&M and Non-AMRP CAPx
- Achieve Gas Ops AMRP O&M and AMRP CAPx targets

# 2.) Enhance Operational Performance

- Ensure the operational metrics for Gas Ops are exceeded for safety, service reliability and customer satisfaction
- Ensure Gas Ops is developing and growing net plant and is cross-training, developing and encouraging continuing education of employees
- Identify and implement Interruptible Transportation Billing Program (ITBP) solution
- Ensure the integrity of the natural gas system is maintained through responsible planning, design, construction, operating and maintenance of the system

# 3.) Achieve Regulatory Compliance

- Ensure the compliance metrics for Gas Ops for regulatory compliance (including environmental), customer complaints, recovery of cost of gas and regulatory treatment for trackers and audits impacting Gas Ops such as AMRP, cost recovery audits and performance management audits are achieved
- Develop 2007 Ohio Gas Rate Case Strategy addressing issues of ownership of curb to meter services, GCR Sales Function and Riser Replacement Report

# 4.) Foster Team Collaboration

- Develop Training Strategy and implement Training Plan for Gas Ops
- Design and begin implementation phase of FE&G GIS and EAM systems
- Treat employees with respect and provide them the training and tools necessary to perform their work functions in a safe environment

# 5.) <u>Define Employee/Organization Strategy</u>

- Implement Workforce Planning/Development Strategy
- Identity long-term organization structure for Gas Ops

### Leadership:

Operational Measure 1: Safety (Gas Ops TICR)

Intent

Gas Operations management, supervision and employees are responsible for safety. The TICR rate is a nationally accepted rate for measuring the success of a safety environment for an organization. Gas Operations management is committed to providing tools and guidance to the organization which positively promotes safety and in turn positively impacts the TICR for Gas Operations. The 2007 safety plan for Gas Operations will be one of the many tools used to promote safe work practices within the organization.

Rational and Logic for Performance levels

Minimum:	Gas Operations TICR for year-ended 2006
Target:	5% better than 2006 Gas Operations TICR
Maximum:	10% better than 2006 Gas Operations TICR

Contact

Dave Barnes 513-287-2266

Operational Measure 2: Reliability – percent reduction of leaks repaired on mains and services Intent

The overall goal of this metric is to measure the percent reduction of leaks repaired on mains and services. The accelerated main replacement program (AMRP) was developed to enhance the safety and reliability of Gas Operations' system with Cast Iron and Bare Steel pipe having a leak rate of 1.3 leaks per mile of main vs. plastic and coated steel having a leak rate of .05 leaks per mile of main. Gas Operations has replaced pipe segments based on nine priorities with the highest potential for incident being replaced first and then the highest potential for leaks next. The AMRP maintenance annual savings targets established in the tracker were calculated based off the reduction of leaks on mains and services (excluding third party damages).

Rational and Logic for Performance levels

Minimum:	4.5% reduction over 2006 leaks repaired	
Target:	7.5% reduction over 2006 leaks repaired	
Maximum:	10% reduction over 2006 leaks repaired	

Contact

Sue Gilb 513-287-2752

Operational Measure 3: FE&G Customer Satisfaction

Intent

Achieve top quartile performance relative to regional or national customer satisfaction benchmark studies conducted by J.D. Power and TQS Research. The performance philosophy is to achieve between top quartile and top decile rankings among mass residential, mass business, and large business customers. Operating companies and functions are encouraged to include additional measures related to the drivers of customer satisfaction that are more closely aligned to their operational needs and/or specific customer segments they support.

Rational and Logic for Performance levels

Mass Market Relationship Survey (Residential and Business):

This survey is conducted monthly for a random sample of customers. To arrive at the 2007 customer satisfaction target scores, the most recent five months of survey results

were averaged to mitigate seasonality bias inherent in 2006 survey data. Observed standard deviations were used to generate 20th percentile and 80th percentile scores, to be used as the Minimum and Maximum performance thresholds, respectively. Given the lack of direct peer benchmark ratings for monthly results, targets are set using the historical trending information with an implicit tie back to regional benchmark studies. Where historical performance is below top quartile, a continuous improvement plan has been adopted with target scores set at a 10th percentile increase above the past year's performance (i.e. 60th percentile). Where historical performance is within top quartile, target thresholds are established to maintain top quartile performance.

Minimum:	20 th percentile score.
Target:	Maintain top quartile or 60 th percentile score.
Maximum:	80 th percentile score.

Duke Energy	Weight	Min	Target	Max
Customer Satisfaction - Overall		73%	76%	79%
Mass Market	64%	74.4%	77.2%	79.4%

### Contact

Tom Osterhus 513-287-2110

# Operational Measure 4: AMRP Expenditure Target

# Intent

The Accelerated Main Replacement Program (AMRP) was developed to enhance the safety and reliability of the Gas Operations' system by replacing cast iron and bare steel pipe with plastic pipe. This measure allows Gas Operations to track the dollars being spent by the program and approved by both the Kentucky and Ohio Regulatory Commissions. The metric encompasses capital, O&M, and a maintenance savings dollar amount for Ohio and a capital amount for Kentucky. The maintenance savings dollar amount for Ohio is based on the reduction of leaks on mains and services (as discussed in operational measure 2 above)

### Rational and Logic for Performance levels

Minimum:	2%/-4% of 2007 Budget for AMRP in OH/KY
Target:	+/-2% of 2007 Budget for AMRP in OH/KY
Maximum:	+/-1% of 2007 Budget for AMRP in OH/KY

Nancy Kemper 513-287-2859

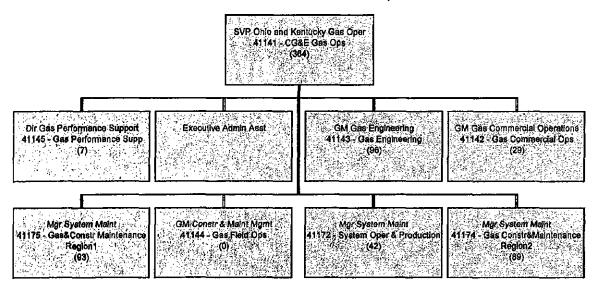

# A Note on Safety:

In addition, to recognize management's critical role in building a zero-injury culture with a focus on preventing safety incidents, a safety objective for company leaders will be based on the Duke Energy company wide TICR (total incident case rate) goal for 2007. Total incident case rate is a common industry standard used to measure safety performance. The threshold goal for 2007 will be 1.67. The target goal will be 1.43.

Under this safety objective, if Duke Energy does not meet the minimum TICR, company leaders' short-term incentive plan (STIP) payouts will be reduced by five percent (similar to the zero-fatalities incentive program in 2006). If we meet the target TICR, LTIP participants will receive their STIP payouts without penalty. (Performance between the two levels will be interpolated.) This additional emphasis on safety for company leaders highlights the importance of management's role in setting expectations regarding safety and serving as role models for other employees.

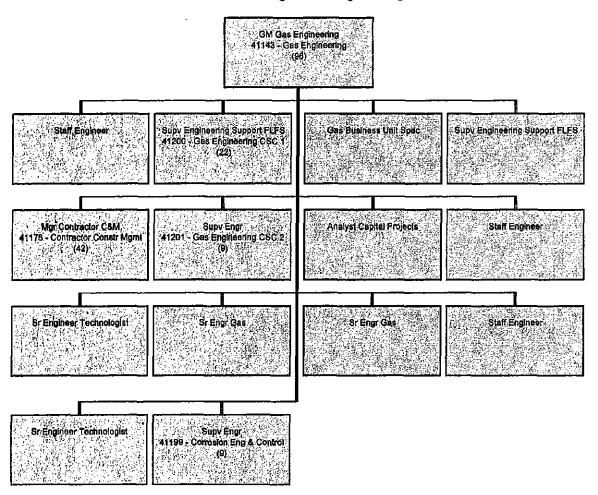

# **DUKE ENERGY CORPORATION MANAGEMENT STRUCTURE**

# Senior Vice President OH & KY Gas Operations

# **DUKE ENERGY CORPORATION MANAGEMENT STRUCTURE**

# General Manager Gas Engineering

# Federal Regulatory Initiatives

# Federal Legislative Affairs, Environmental and Sustainability

# Miscellaneous Government/Political Stuff

# **Operations**

- AMRP Module Closeout In the six years of AMRP there have been 268 modules issued, 255 have been turned in for processing and completion and 246 are closed out. There are a total of 74,330 service JCF's involved in the six years, 62,787 service JCF's have been turned in and 56,999 service JCF's have been processed. 255 jobs have been forwarded to Gas Engineering to place in SmallWorld. Presently, 14 of these jobs are on hold pending Smallworld completion before services can be added.
- MAOP Review To date in 2007, 185 jobs have been reviewed for MAOP totaling 375,618 feet. There are 22 jobs pending MAOP review totaling 69,645 feet.
- Drafting & Mapping For 2007 map updating, we have completed 150 out of 185 jobs or an 81.1% completion rate.
- Engineers Report For 2007, Engineering has received 134 preliminary projects and 39 construction projects to review for conflicts and either provide input for adjustments of other utilities or design for the replacement of gas facilities.
- Bethel Pressure Improvement Currently purchasing easements and developing specifications. Bid date is 12/1/2007. Construction start date is 5/1/2008. OPSB to meet and issue certificate to construct on 5/21/2007.
- Amy Spiller, Doug Vaught and Gary Hebbeler met with the City of Cincinnati
  to resolve the citation issued for litter on company property on Melish
  Avenue. Amy Spiller did a fantastic job of defending our position and having
  the citation rescinded. We will investigate the possibility of selling the
  property while obtaining an easement so we can avoid this same occurrence
  in the future.

- Guided-Wave Technology PHMSA has recently issued a guidance document for the use of Guided-Wave technology that will impact the way cased pipeline crossings are assessed. The major target-items from this guidance document were included into procedure <u>IMP 6-016A - Guided-Wave</u> <u>Ultrasonic Inspection (Cased Piping)</u> and submitted for internal review. The impact these new guidelines will have on the inspection schedule (and budget) is currently being assessed and should be available shortly after the procedure is approved.
- RP 0502-2002 Clarification Industry believes that PHMSA has interpreted NACE RP 0502-2002 Pipeline External Corrosion Direct Assessment Methodology far more conservatively than intended. In particular, PHSA is questioning the use of DA for cased pipeline crossings because of unclear language contained in Table 2: ECDA Tool Selection Matrix. (If DA is not deemed an approved assessment method for casings, the only other assessment option is Pressure Testing.)
  - At industry's request, NACE has assembled a technical study group to review the table in question; industry's desire is NACE will either revise the table with clearer language or issue a clarification letter. (Review should be completed in mid-July.) If NACE issues a clarification letter, PHMSA is willing to "listen", but does not guarantee their approval for use of DA for casings.
- PI Confluence, Inc. (Gary White) was selected to perform the Pipeline
  Integrity Management (PIM) "audit" from a list of five potential candidates.
  Denny Glenn of PD Strategic Sourcing is putting together the contract with PI
  Confluence, Inc. This audit will ensure that Gas Operations is meeting or
  exceeding the minimal requirements in PIM per the Office of Pipeline Safety
  (OPS) and to prepare our organization for an audit by the OPS later this year.
- GIS "GAS" Requirement sessions were held during the weeks of April 23, April 30, and May 7, 2007. These sessions are being attended by Joe Lovell, Steve Tom, Steve Sims and Jim Callahan. Steve Long Jr. and David Callaghan are facilitating and taking requirement notes respectively. Additional Gas Operations' personnel are attending sessions as needed.
- Meeting was held to further discuss the Land Base "conflation" issue and costs associated with the GIS Project on May 9, 2007. Steve Adams, Ron York, John Bain, Jim Callahan, and Connie Roberts (facilitator) participated in this meeting.
- Pressure Improvements To date a total of 18 budgeted and blanket projects are identified for 2007, and (1) for 2008. Additional projects may become necessary after review of winter operations.

# 2007 PRESSURE IMPROVEMENTS as of 01-09-07

Name	Dist	Мар	Scope	Purpose & Necessity	Status	Update
OHIO						
C304 - Union Rd 05-3602 -9 Bud. / WJR	N	N8E3-36	15,000' of 8"S-F/L	Loop system to improve pressure to Morrow.	Α	Bids due back May 14 All permits in
Reg 4S Springboro High School 06-3225-7 CWA	N	N10E4-46	25 ' of 4" steel	Dist Regulator 60# to IP	CC	Completed March 2007
FL O @ Great Miami River / CTL 04-1181-9	N	N08W01- 46	1,300' of 6 " S-F/L	Replacement of exposed main.	А	Survey complete. In design Out for bid May
MOD. 272 – 1,2,3 / CTL 06-3607-6	NW	\$01W02- 42	5,650' of 2" steel Medium pressure to IP	Pressure increase. Replace threaded pipe.	A	Bid
Union Center Blvd. / CTL 05-3603-7	N	N06E01- 37	Inst. 6,200' of 8" S F/L	Pressure improvement.	Α	Out for permit
Amelia Olive Branch Rd PRI. CWA CLE-125 STI,06-7001-8, STA 550 IMP., 06-3204- 2, STA 544 IMP., 06- 3205-9. CG20 Services, 05- 4-3.	Е	S02E04- 37	Upgrade Stations 550 & 544 for increased flow, Convert 9,000' of 4" F/L CG20 to HP, Convert 97 F/L services to HP, Abandon Stations 543, 15, 672, & 227; replace main and F/L as necessary for STI.	Road Improvement taking out Sta. 227. Upgrade existing stations and perform conversions instead of constructing new station. Overall system improvement. Eliminates 4 stations for Charlie Wells.	СР	Awarded to NPL, started 11/06/06. Waiting for C&M to complete downgrade. Service work to be completed following downgrade, per Mark Prebble.
Union Center Sta. / CWA 06-3602-7	N	N06E01- 53	60' of 4" Steel Install Station.	Pressure Improvement. Improve pressure & add feed.	CC	Completed March 2007
Ebenezer / DRB 06-3606-8	NW	N02W02- 09	900' of 4" Plastic HP	Pressure Improvement Add Loop	Α	Not started. Out for bid June 1
Columbia Pkwy / DRB 06-7228-7	E	N01E01- 22	Repl 24" CI w 1,100' of 8" plastic	Street Improvement. Replace Leaking IP pipe.	Α	Back from bid, waiting for permit & material
MOD.252 -1,2,3,4,5 /JBL 06-3651-4	N	N10E02- 64	IP Pressure Increase 4,000' of 2" plastic.	Pressure Increase. Replace coupled pipe.	Α	Out for survey. Out for bid April 2.
Kyles Station Rd / JBL 06-3615-9	N	N08E02- 64	1,300' of 4" plastic.	Pressure Improvement Tie in two systems.	CC	Placed in service 11/29/06. Completed.
GMONTGRD / JEB 05-7303-0	E	N05E03- 55	580' of 12" Steel	Street widening.	Α	Base map completed. SLV handling test holes. Out for bid May 30
Weil Rd / JEB 06-3604-3	Е	N04E03- 37	1,450' of 4" plastic HP.	Pressure improvement. Add loop.	cc	Completed late April
MOD. 270 – 1,2. / JWS 06-3650-6	NW	N01W02- 19	MP to IP Increase.	Pressure increase.	СР	Construction in progress
MOD. 274 / WRP 06-3649-8	NW	N03W02- 62	MP to IP Increase Replacement	Pressure Increase	Α	Phase 1-2 out for bid Phase 1-6 out for permit
Amberley Village Imp. -3212-7 / CWA	С	N3E1-63	1,300" of 2"Pl IP 400" of 6" Pl IP Abandon 3 Sys. Sta.	Eliminate 3 problem stations.	cc	Completed March 2007

SFR Reference: Chapter II(B)(9)(a)(i,ii,iii)

# I. Policies and Goal Setting

The policies of the Gas Commercial Operations Department (Department) evolve from and support the objectives of the Company. The General Manager, Gas Commercial Operations, implements the policies and objectives under the direction of the Senior Vice-President, Gas Operations. These include policies regarding purchases of natural gas and upstream capacity, and providing gas transportation service for end users. The Department also supports the corporate policies and objectives through department directives, procedures and practices.

The goals of the Department are designed to support the goals of Gas Operations and business plan of the US Franchised Electric & Gas (US Franchised E&G). Determination of the objectives and goals is based on a decision process involving the Senior Vice-President, Gas Operations; the General Manager, Gas Commercial Operations; and the staff of the Department. The internal criteria used in the decision process include, among others, the US Franchised E&G business plan and the Load Forecasting Department's Gas Load Forecast. External criteria include energy market trends, projected demand for natural gas versus supply availability, availability of interstate pipeline capacity, interstate pipelines' tariffs, federal and state regulatory trends, and input from external consultants, including recommendations from auditors appointed by state regulatory commissions. The Ohio/Kentucky Gas Operations goals and objectives are attached as Exhibits GCO-2 and CGO-3 respectively.

Duke Energy Ohio's primary objectives in securing natural gas for its firm sales customers are: (1) to purchase a reliable source of gas, (2) secure firm interstate pipeline capacity in order to transport the gas during extreme weather conditions, and (3) to purchase and transport the gas at an optimal cost, with significant consideration for minimizing price volatility for customers and supply diversity.

It is also Duke Energy Ohio's policy to transport customer-owned gas, through its existing distribution piping system, provided that:

- The customer meets Duke Energy Ohio's eligibility requirements listed in Duke Energy Ohio's tariffs for transportation services;
- The customer accepts and signs Duke Energy Ohio's transportation contract;

- All gas purchased and transported through an interstate pipeline to Duke Energy Ohio's city gate by the customer, or customer's supplier or agent, is in accordance with the Federal Energy Regulatory Commission's rules and regulations; and
- The service for higher priority customers is not adversely affected by providing transportation service.

Review of these objectives and policies is continuous and revisions are made at least annually. Some may be revised more frequently based on their sensitivity to changing economic and market conditions.

# II. Strategic Planning

The Department's plan for securing gas supply and pipeline capacity is discussed in The Cincinnati Gas & Electric Company's 2005 Long-Term Forecast Report for Gas Demand, Gas Supply, and Facility Projections which was filed with the Public Utilities Commission of Ohio on May 26, 2005, and includes The Cincinnati Gas & Electric Company's Gas Supply Strategic Plan.

# III. Organizational Structure

A General Manager who reports directly to the Senior Vice-President, Gas Operations, heads the Department. Gas Commercial Operations consists of:

- Gas Transportation & Customer Services;
- Gas Procurement & Administrative Services;
- Gas Rates & Transportation Programs;
- KO Transmission Administration; and
- Gas Control and Technical Services.

The organizational structure is presented on Exhibit GCO-1.

# IV. Responsibilities

The Department has the responsibilities of ensuring that the Company has a sufficient quantity of natural gas and regulating the flow of gas through the feeder/distribution system. In addition, Gas Commercial Operations analyzes future gas consumption and supply levels, controls the liquid propane storage facilities, and indicates when to produce gas from the storage facilities for peak shaving purposes and procures propane feedstock. Gas Commercial Operations ensures compliance with regulations that relate to the procurement, transportation and production of gas supplies.

The Gas Commercial Operations Department also has the responsibility of negotiating transportation agreements and storage contracts with interstate pipeline gas transportation companies, negotiates NAESB gas supply contracts with producers and marketers, and negotiates asset management agreements. It also markets, administers and complies with the federal regulation of KO Transmission Company, an interstate gas pipeline subsidiary of Duke Energy Ohio. In addition, this Department provides supply forecasting, analysis of gas costs and customer requirements, cash reporting, various statistical reports, and rate case work.

Gas Commercial Operations is also responsible for monitoring all Federal and State legislative and regulatory actions involving gas supply matters, intervening when appropriate. This Department also mediates service levels and costs with pipeline suppliers.

The Gas Control area of Gas Commercial Operations is responsible for measuring, monitoring, and operating the gas feeder/distribution system. This division also measures and controls supplier gas coming into the system, checks for correct pressures at all levels of the system, regulates this pressure through a series of remote and manual regulators, manages the interlocking systems of mains throughout the distribution system, and ensures that natural gas is readily detectable (odorized).

The Transportation and Customer Services area of Gas Commercial Operations provides numerous services to gas transportation customers and suppliers, as necessary, to monitor the viability of gas transportation services for our customers. Specific items include, but are not limited to: nomination confirmations, transporting, balancing, billing, load forecasting, and education regarding gas transportation tariffs and processes utilized to implement the tariffs. Each Rate IT customer is assigned to an Account Manager, who is responsible for all account management functions associated with servicing these customers' gas transportation accounts.

### V. Practices and Procedures

The practices and procedures of the organization are continually being formulated and refined to provide the necessary guidelines for all personnel in meeting the goals and objectives of the organization and the Company.

Because of the dynamic changes in the gas industry both at the federal and state level, the Gas Commercial Operations Department's practices and procedures are reviewed and revised continuously to assure that all functional areas are operating at maximum efficiency and in compliance with all applicable laws and regulations.

Specific duties of the Gas Commercial Operations Department include, but are not limited to:

- Effectively manage gas supply portfolio, including propane peaking plants, to meet customer requirements;
- Effectively manage the distribution and transportation of gas to customers, including management of the interruptible transportation program;
- Represent the Company before State and Federal Regulatory Agencies on gas supply, cost, and interstate pipeline matters;
- Prepare and maintain gas operations budgets including gas supply and cost forecasts and operating and maintenance;
- Purchase natural gas supply and interstate pipeline transportation capacity; verify invoices and process accounts payable;
- Coordinate the transportation programs needed to effectuate the delivery of gas between supplier and end user;
- Measure, monitor, and operate the gas feeder/distribution system;
- Maintain pressure-regulating facilities; and
- Work with governmental agencies, industry associations and interstate pipeline companies to develop processes to be implemented in the event of emergencies, such as significant interruptions to the delivery of gas.

# VI. <u>Decision Making and Control</u>

In making decisions, recommendations and information are received by the General Manager, Gas Commercial Operations from the direct reports. The General Manager initiates action after discussion with and approval from the Senior Vice-President, Gas Operations. The Group Executive & President of US Franchised E&G is consulted as deemed appropriate.

The individual direct reports of the General Manager, Gas Commercial Operations, make day-to-day operational decisions that are within the framework of existing policies, strategies, and procedures.

Compliance is monitored internally and externally by State and Federal regulatory agencies. In particular, every two years, an outside auditor selected by the PUCO audits the Gas Purchasing Policies and Practices of the Company extensively. The results of these audits are submitted to the PUCO.

### VII. Internal and External Communication

As a means of assisting in the decision making process, both internal and external communications are maintained. Internal communications are accomplished within the department by the preparation of weekly status reports, informal meetings, periodic staff meetings and daily discussions. Also, internally, discussions and input

are obtained as needed from the Gas Construction and Maintenance, Gas Engineering, Gas Performance Support, Rate and Legal Departments.

External communications are very important in the decision process and consist of close association with outside legal personnel, consultants, and representatives of other pipeline and distribution companies. Also, the Gas Commercial Operations Department actively monitors proceedings before state and federal regulatory agencies on gas supply and transportation matters. This activity greatly enhances the decision-making capabilities of the department by making available to the Company knowledge of many gas supply options.

Information that our customers and the general public need to know is passed on using the local media.

### VIII. Goal Attainment and Qualification

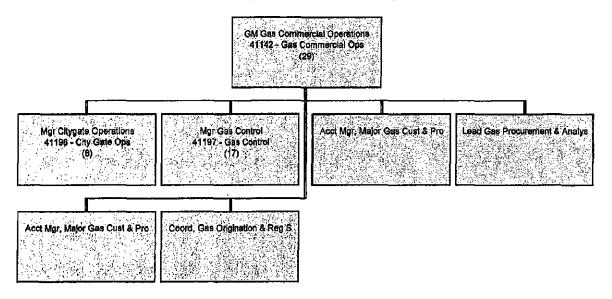

The Gas Commercial Operations Department uses actual gas costs compared to other gas LDCs in the State of Ohio as a benchmark. Duke Energy Ohio compares its actual annual gas costs per Mcf sales to the average of the actual annual gas cost per Mcf sales of two of the other three major gas distribution companies in Ohio.

Another measure of success of the Gas Commercial Operations Department is the Financial and Management Performance Audits of Duke Energy Ohio's GCR conducted by the Public Utilities Commission of Ohio on a bi-annual basis.

Department employees are evaluated annually on the attainment of the annual individual key performance measures, which are established in support of department key performance goals.

#### **DUKE ENERGY CORPORATION MANAGEMENT STRUCTURE**

# **General Manager Gas Commercial Operations**

# 2007 Ohio/Kentucky Gas Operations Objectives

# 1.) Meet 2007 Financial Targets

- Meet targets for Gas Ops Non-AMRP O&M and Non-AMRP CAPx
- Achieve Gas Ops AMRP O&M and AMRP CAPx targets

# 2.) Enhance Operational Performance

- Ensure the operational metrics for Gas Ops are exceeded for safety, service reliability and customer satisfaction
- Ensure Gas Ops is developing and growing net plant and is cross-training, developing and encouraging continuing education of employees
- Identify and implement Interruptible Transportation Billing Program (ITBP) solution
- Ensure the integrity of the natural gas system is maintained through responsible planning, design, construction, operating and maintenance of the system

# 3.) Achieve Regulatory Compliance

- Ensure the compliance metrics for Gas Ops for regulatory compliance (including environmental), customer complaints, recovery of cost of gas and regulatory treatment for trackers and audits impacting Gas Ops such as AMRP, cost recovery audits and performance management audits are achieved
- Develop 2007 Ohio Gas Rate Case Strategy addressing issues of ownership of curb to meter services, GCR Sales Function and Riser Replacement Report

# 4.) Foster Team Collaboration

- Develop Training Strategy and implement Training Plan for Gas Ops
- Design and begin implementation phase of FE&G GIS and EAM systems
- Treat employees with respect and provide them the training and tools necessary to perform their work functions in a safe environment

# 5.) Define Employee/Organization Strategy

- Implement Workforce Planning/Development Strategy
- Identity long-term organization structure for Gas Ops

Operational Measure 1: Safety (Gas Ops TICR)

Intent

Gas Operations management, supervision and employees are responsible for safety. The TICR rate is a nationally accepted rate for measuring the success of a safety environment for an organization. Gas Operations management is committed to providing tools and guidance to the organization which positively promotes safety and in turn positively impacts the TICR for Gas Operations. The 2007 safety plan for Gas Operations will be one of the many tools used to promote safe work practices within the organization.

Rational and Logic for Performance levels

Minimum:	Gas Operations TICR for year-ended 2006
Target:	5% better than 2006 Gas Operations TICR
Maximum:	10% better than 2006 Gas Operations TICR

Contact

Dave Barnes 513-287-2266

Operational Measure 2: Reliability – percent reduction of leaks repaired on mains and services Intent

The overall goal of this metric is to measure the percent reduction of leaks repaired on mains and services. The accelerated main replacement program (AMRP) was developed to enhance the safety and reliability of Gas Operations' system with Cast Iron and Bare Steel pipe having a leak rate of 1.3 leaks per mile of main vs. plastic and coated steel having a leak rate of .05 leaks per mile of main. Gas Operations has replaced pipe segments based on nine priorities with the highest potential for incident being replaced first and then the highest potential for leaks next. The AMRP maintenance annual savings targets established in the tracker were calculated based off the reduction of leaks on mains and services (excluding third party damages).

Rational and Logic for Performance levels

Minimum:	4.5% reduction over 2006 leaks repaired
Target:	7.5% reduction over 2006 leaks repaired
Maximum:	10% reduction over 2006 leaks repaired

Contact

Sue Gilb 513-287-2752

# Operational Measure 3: FE&G Customer Satisfaction

Intent

Achieve top quartile performance relative to regional or national customer satisfaction benchmark studies conducted by J.D. Power and TQS Research. The performance philosophy is to achieve between top quartile and top decile rankings among mass residential, mass business, and large business customers. Operating companies and functions are encouraged to include additional measures related to the drivers of customer satisfaction that are more closely aligned to their operational needs and/or specific customer segments they support.

Rational and Logic for Performance levels

# Mass Market Relationship Survey (Residential and Business):

This survey is conducted monthly for a random sample of customers. To arrive at the 2007 customer satisfaction target scores, the most recent five months of survey results

were averaged to mitigate seasonality bias inherent in 2006 survey data. Observed standard deviations were used to generate 20th percentile and 80th percentile scores, to be used as the Minimum and Maximum performance thresholds, respectively. Given the lack of direct peer benchmark ratings for monthly results, targets are set using the historical trending information with an implicit tie back to regional benchmark studies. Where historical performance is below top quartile, a continuous improvement plan has been adopted with target scores set at a 10th percentile increase above the past year's performance (i.e. 60th percentile). Where historical performance is within top quartile, target thresholds are established to maintain top quartile performance.

Minimum:	20 th percentile score.
Target:	Maintain top quartile or 60 th percentile score.
Maximum:	80 th percentile score.

Duke Energy	Weight	Min	Target	Max
Customer Satisfaction - Overall		73%	76%	79%
Mass Market	64%	74.4%	77.2%	79.4%
Large Business Market	36%	70.0%	73.5%	77.0%

Large Business Market	29%	70.0%	73.5%	77.0%

#### Contact

Tom Osterhus 513-287-2110

#### Operational Measure 4: AMRP Expenditure Target

#### Intent

The Accelerated Main Replacement Program (AMRP) was developed to enhance the safety and reliability of the Gas Operations' system by replacing cast iron and bare steel pipe with plastic pipe. This measure allows Gas Operations to track the dollars being spent by the program and approved by both the Kentucky and Ohio Regulatory Commissions. The metric encompasses capital, O&M, and a maintenance savings dollar amount for Ohio and a capital amount for Kentucky. The maintenance savings dollar amount for Ohio is based on the reduction of leaks on mains and services (as discussed in operational measure 2 above)

#### Rational and Logic for Performance levels

Minimum:	2%/-4% of 2007 Budget for AMRP in OH/KY
Target:	+/-2% of 2007 Budget for AMRP in OH/KY
Maximum:	+/-1% of 2007 Budget for AMRP in OH/KY

#### Contact

Nancy Kemper 513-287-2859

#### A Note on Safety:

In addition, to recognize management's critical role in building a zero-injury culture with a focus on preventing safety incidents, a safety objective for company leaders will be based on the Duke Energy company wide TICR (total incident case rate) goal for 2007. Total incident case rate is a common industry standard used to measure safety performance. The threshold goal for 2007 will be 1.67. The target goal will be 1.43.

Under this safety objective, if Duke Energy does not meet the minimum TICR, company leaders' short-term incentive plan (STIP) payouts will be reduced by five percent (similar to the zero-fatalities incentive program in 2006). If we meet the target TICR, LTIP participants will receive their STIP payouts without penalty. (Performance between the two levels will be interpolated.) This additional emphasis on safety for company leaders highlights the importance of management's role in setting expectations regarding safety and serving as role models for other employees.

# DUKE ENERGY DUKE ENERGY OHIO

SUMMARY OF MANAGEMENT POLICIES, PRACTICES AND ORGANIZATION GAS CONSTRUCTION & MAINTENANCE MANAGEMENT DEPARTMENT SFR Reference: Chapter II(B)(9)(a)(ii,viii)

# I. Policy and Goal Setting

The primary responsibility of the Gas Construction & Maintenance Management Department (Department) is to install, operate, and maintain distribution facilities for the delivery of gas from the supplier and/or company's plants and storage facilities to the customer in a safe, reliable and economical manner. The Department supports the overall goals of the gas operations, as well as, the business plan of US Franchised Electric & Gas (US Franchised E&G). Refer to the overall goals attached as Exhibits CGO-2 and CGO-3.

The Managers of Construction & Maintenance Management regularly meet to develop work plan goals that will enable the department to meet the business plan of Ohio and Kentucky Gas Operations (Gas Operations). These goals are then submitted to the Senior Vice President, Gas Operations to be included as part of the US Franchised E&G business plan.

Goals are reviewed with personnel in each division to assure their support and implementation. To assure continuous attention to goals, they are a large part of the employee performance appraisal system. There are regular staff meetings held with the managers to discuss the progress of the work plan and to identify any potential problems for corrective action. Additionally, there are staff meetings between managers and their supervisors for the same purpose.

The Department, in conjunction with the other operating areas of Gas Operations, including the Senior Vice President, is responsible for the development of practices, policies and procedures for the installation, operation and maintenance of gas facilities. These practices, policies and procedures are reported in the "Gas Operations Standards Manual for Design, Construction, System Operations and

Maintenance." This manual provides the policies, practices and procedures to department employees engaged in the installation and maintenance of gas facilities.

The Department maintains additional manuals to provide training and technical support for employees. These manuals provide information regarding quality assurance and emergency action to be taken when required. The Department also supports the corporate policies and objectives through the department directives, procedures and practices.

# II. Strategic Planning

Gas Operations planning directly supports the US Franchised E&G Business Plan.

Examples of strategic planning by the Department are:

- Identify, develop and implement new methods and equipment to improve service, and reduce costs;
- Hire, train, and develop company and contractor personnel to perform the job now and to be prepared to do so in the future;
- Analysis of workload verses manpower to maintain flexibility to provide safe, reliable and economic service to our customers and to maintain system integrity;
- To monitor the condition of the gas system to identify areas that warrant replacement, upgrading, etc. to meet existing and future energy consumption; and
- Participative management is key with employees sharing a common goal.
   Quality assurance and Operator Qualification are essential to assuring safe and reliable service. A continuous effort is maintained to train, qualify and develop personnel.

### III. Organizational Structure

Gas Construction and Maintenance Management is within the US Franchised E&G and is headed by the Senior Vice President, Gas Operations. The Department is organized as follows into (3) divisions / areas.

- System Operations and Production (Gas Plants);
- Gas Construction & Maintenance Region 1 (System Maintenance); and
- Gas Construction & Maintenance Region 2 (System Maintenance).

An organizational chart showing the divisions / areas is attached as Exhibit GCM-1.

# IV. Responsibilities

The Department has general charge of the facilities and resources necessary for the safe, reliable and economic installation, operation and maintenance of facilities and equipment for the delivery of gas from the supplier and/or the Company's gas plants to the customer.

System Operations and Production Division has the responsibility of maintaining and ensuring proper operation of all propane plants and propane storage facilities and compliance programs such as regulator/relief valve and control valve inspection. It also maintains and assists in operating all pressure regulating facilities.

System Maintenance has responsibility for maintenance and repair of gas facilities, as well as, compliance programs such as Leak Surveys and leak repair / evaluation.

Specific responsibilities of Gas Construction and Maintenance Management include:

- Install, operate, and maintain transmission and distribution facilities including mains, services, meters, and regulators;
- Conduct leakage detection surveys and other Department of Transportation compliance programs;
- Respond to gas trouble calls (investigate reports of escaping gas), emergencies and customers' requests for service;
- · Set and remove residential meters; and
- Inspect residential house piping during new service installation...

# V. <u>Practices and Procedures</u>

The Department has direct responsibility for review and revision of practices and procedures used within the Department. The Department's practices and procedures are reviewed and revised continuously to assure that all functional areas are operating at maximum efficiency and in compliance with all applicable laws and regulations. These policies and procedures provide support to employees engaged in the construction and maintenance and compliance activities.

The Department works closely with Gas Commercial Operations, Gas Engineering, Gas Performance Support, Service Delivery, Enterprise Fleet and Meter Operations, Distribution Design, Sourcing, and Legal. Engineering provides engineering services and expertise and guidance for achievement of compliance with all applicable regulatory rules and codes. Gas Performance Support provides employee training, code and regulation interpretation, process improvement, and financial support. Service Delivery provides first contact gas emergency response and notifies the Department of emergencies requiring their expertise. Enterprise Fleet and Meter Operations provide Gas Operations with metering and regulating equipment and provide and maintain transportation and excavating equipment to support the necessary department operations. Distribution Design assists the Operating Department by projecting what new work can be expected, permitting planning for future manpower, material and equipment needs. The Legal Department provides legal advice for management and/or employees acting on behalf of the Company. Sourcing provides the purchasing and stocking of routine materials used in day-today operations of Gas Operating.

Gas Construction and Maintenance Management works closely and receives services from many departments within the Company. The Human Resources, Labor Management, Safety & Health Departments and the Staffing & Employee Development Department secure competent employee recruitment, provide employee emergency medical assistance, administering final stages of employee disputes, etc. Facilities Services, Office Services, Government and Regulatory Affairs, Accounting, Information Technology and the Environmental Resource Management Departments interact with all the divisions/areas within the department in various ways.

# VI. Decision Making and Control

Operation, goal and policy decisions are made at the appropriate level consistent with impact and authority.

Decisions that impact a segment of the Company broader than Gas Construction and Maintenance Management are discussed with the Senior Vice President of Gas Operations. The Group Executive & President of US Franchised E&G is consulted as deemed appropriate. Depending on the type of decision and the degree of impact, this discussion could range from merely informative to requiring formal approval. The Managers of Gas Construction and Maintenance Management and the Senior

Vice President, Gas Operations discuss, in general terms, the activity of the Department on a routine basis. Although these discussions are informal in nature, they are ongoing, keeping both parties informed. Individual Managers hold regular meetings with their personnel to discuss Department policies.

The first line supervisors are the decision makers on day-to-day routine matters. This reinforces the Department policy to allow decisions to be made at the lowest level possible. In the more complex matters, the decision could progress to a higher level, including the executive level, if necessary.

Decisions, such as personnel assignments, are typical of those made by a Field Supervisor. Management in each division makes decisions such as job priority, work rules and manpower assignments. All decision-making is designed to include participative style of management.

# VII. Internal and External Communication

The Managers of Gas Construction and Maintenance Management have contact either by telephone or in person on an ongoing basis with the Senior Vice President of Gas Operations, the General Managers of Engineering and Commercial Operations and Director of Gas Performance Support to review and discuss pending issues. The Managers also meet regularly with the General Managers of Gas Engineering, Gas Commercial Operations, Director of Gas Performance Support, the Senior Vice President of Gas Operations and the Gas Operations Budget Specialists to discuss matters of mutual concern as well as planning strategies.

Internal department communication among the staff and management is frequent during daily activity. The department is located at some 8 different locations with staffs as small as three to staffs as large as 75 plus. The Managers regularly visit these outlying facilities to listen to employee's wants, needs, etc. and to reinforce communication.

Internal communications consisting of informational meetings are held as needed. These meetings are normally held by the Senior Vice President and Managers who hold meetings and relay pertinent information to field personnel. Safety meetings are held with all department personnel at least quarterly and are conducted by Safety & Health personnel with managers present. The Emergency Plan, Department Procedure Manuals, inter-department memos, various letters, etc. are reviewed at

least annually or as needed. Additionally, management has daily contact with their staff, which provides for various discussions including assistance in decision-making, progress of various jobs, personnel requirements and other pertinent company and/or department business.

External communications consist of participating in meetings with other utilities as well as actively participating on various committees of the American Gas Association, Ohio Gas Association, Kentucky Gas Association, and Midwest Energy Association. In addition, various personnel are selected to attend appropriate management training programs outside the company.

Ideas, suggestions and information about new techniques are received and evaluated from all levels of employees within Gas Operations. In addition, each Manager reviews trade magazines, literature, etc. to determine new ideas and methods of providing improved services while reducing Gas Operating Department costs. Additionally, Gas Operations participates in the American Gas Association's Benchmarking program to gain lessons learned from others, determine how our processes compare to those of others in the industry, and learn of better means of providing service to the customers at the lowest possible cost. It is a responsibility of all Department supervisors to constantly seek new and better means of providing safe and reliable service to the customers at the lowest possible cost.

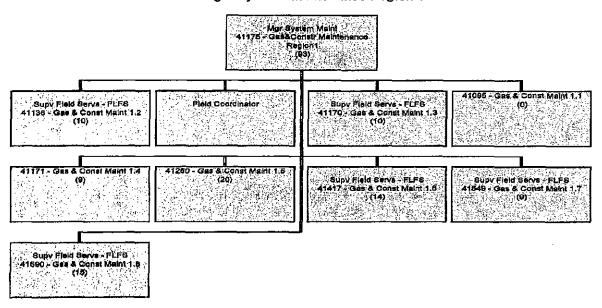

# VIII. Goal Attainment and Qualification

Goals and the corresponding methods of measuring goal attainment are formulated by management to meet the special needs of their respective divisions / areas or employees. Some examples of specific goals are:

- Managing Operating Expenses and Capital Expenditures;
- Achieve 99% of new service tie-ins to meet specific requirements;
- Deliver safe and reliable 24/7 service:
- Improve Gas Customer Average Interruption Duration Index Average;
- Encourage employee development and continuous improvement across the processes;
- Meet compliance requirements and continue open and effective relationships with the regulators;
- Improve Customer Satisfaction to top 25% JD Powers survey results; and
- Improve upon current safety statistics.

# 2007 Ohio/Kentucky Gas Operations Objectives

# 1.) Meet 2007 Financial Targets

- Meet targets for Gas Ops Non-AMRP O&M and Non-AMRP CAPx
- Achieve Gas Ops AMRP O&M and AMRP CAPx targets

# 2.) Enhance Operational Performance

- Ensure the operational metrics for Gas Ops are exceeded for safety, service reliability and customer satisfaction
- Ensure Gas Ops is developing and growing net plant and is cross-training, developing and encouraging continuing education of employees
- Identify and implement Interruptible Transportation Billing Program (ITBP) solution
- Ensure the integrity of the natural gas system is maintained through responsible planning, design, construction, operating and maintenance of the system

# 3.) Achieve Regulatory Compliance

- Ensure the compliance metrics for Gas Ops for regulatory compliance (including environmental), customer complaints, recovery of cost of gas and regulatory treatment for trackers and audits impacting Gas Ops such as AMRP, cost recovery audits and performance management audits are achieved
- Develop 2007 Ohio Gas Rate Case Strategy addressing issues of ownership of curb to meter services, GCR Sales Function and Riser Replacement Report

# 4.) Foster Team Collaboration

- Develop Training Strategy and implement Training Plan for Gas Ops
- Design and begin implementation phase of FE&G GIS and EAM systems
- Treat employees with respect and provide them the training and tools necessary to perform their work functions in a safe environment

# 5.) <u>Define Employee/Organization Strategy</u>

- Implement Workforce Planning/Development Strategy
- Identity long-term organization structure for Gas Ops

#### Leadership:

Operational Measure 1: Safety (Gas Ops TICR)

Intent

Gas Operations management, supervision and employees are responsible for safety. The TICR rate is a nationally accepted rate for measuring the success of a safety environment for an organization. Gas Operations management is committed to providing tools and guidance to the organization which positively promotes safety and in turn positively impacts the TICR for Gas Operations. The 2007 safety plan for Gas Operations will be one of the many tools used to promote safe work practices within the organization.

Rational and Logic for Performance levels

Minimum:	Gas Operations TICR for year-ended 2006
Target:	5% better than 2006 Gas Operations TICR
Maximum:	10% better than 2006 Gas Operations TICR

Contact

Dave Barnes 513-287-2266

Operational Measure 2: Reliability – percent reduction of leaks repaired on mains and services Intent

The overall goal of this metric is to measure the percent reduction of leaks repaired on mains and services. The accelerated main replacement program (AMRP) was developed to enhance the safety and reliability of Gas Operations' system with Cast Iron and Bare Steel pipe having a leak rate of 1.3 leaks per mile of main vs. plastic and coated steel having a leak rate of .05 leaks per mile of main. Gas Operations has replaced pipe segments based on nine priorities with the highest potential for incident being replaced first and then the highest potential for leaks next. The AMRP maintenance annual savings targets established in the tracker were calculated based off the reduction of leaks on mains and services (excluding third party damages).

Rational and Logic for Performance levels

Minimum:	4.5% reduction over 2006 leaks repaired
Target:	7.5% reduction over 2006 leaks repaired
Maximum:	10% reduction over 2006 leaks repaired

Contact

Sue Gilb 513-287-2752

#### Operational Measure 3: FE&G Customer Satisfaction

Intent

Achieve top quartile performance relative to regional or national customer satisfaction benchmark studies conducted by J.D. Power and TQS Research. The performance philosophy is to achieve between top quartile and top decile rankings among mass residential, mass business, and large business customers. Operating companies and functions are encouraged to include additional measures related to the drivers of customer satisfaction that are more closely aligned to their operational needs and/or specific customer segments they support.

Rational and Logic for Performance levels

#### Mass Market Relationship Survey (Residential and Business):

This survey is conducted monthly for a random sample of customers. To arrive at the 2007 customer satisfaction target scores, the most recent five months of survey results

were averaged to mitigate seasonality bias inherent in 2006 survey data. Observed standard deviations were used to generate 20th percentile and 80th percentile scores, to be used as the Minimum and Maximum performance thresholds, respectively. Given the lack of direct peer benchmark ratings for monthly results, targets are set using the historical trending information with an implicit tie back to regional benchmark studies. Where historical performance is below top quartile, a continuous improvement plan has been adopted with target scores set at a 10th percentile increase above the past year's performance (i.e. 60th percentile). Where historical performance is within top quartile, target thresholds are established to maintain top quartile performance.

Minimum:	20 th percentile score.
Target:	Maintain top quartile or 60 th percentile score.
Maximum:	80 th percentile score.

#### Operational Measure 4: AMRP Expenditure Target

#### Intent

The Accelerated Main Replacement Program (AMRP) was developed to enhance the safety and reliability of the Gas Operations' system by replacing cast iron and bare steel pipe with plastic pipe. This measure allows Gas Operations to track the dollars being spent by the program and approved by both the Kentucky and Ohio Regulatory Commissions. The metric encompasses capital, O&M, and a maintenance savings dollar amount for Ohio and a capital amount for Kentucky. The maintenance savings dollar amount for Ohio is based on the reduction of leaks on mains and services (as discussed in operational measure 2 above)

#### Rational and Logic for Performance levels

Minimum:	2%/-4% of 2007 Budget for AMRP in OH/KY
Target:	+/-2% of 2007 Budget for AMRP in OH/KY
Maximum:	+/-1% of 2007 Budget for AMRP in OH/KY

#### A Note on Safety:

In addition, to recognize management's critical role in building a zero-injury culture with a focus on preventing safety incidents, a safety objective for company leaders will be based on the Duke Energy company wide TICR (total incident case rate) goal for 2007. Total incident case rate is a common industry standard used to measure safety performance. The threshold goal for 2007 will be 1.67. The target goal will be 1.43.

Under this safety objective, if Duke Energy does not meet the minimum TICR, company leaders' short-term incentive plan (STIP) payouts will be reduced by five percent (similar to the zero-fatalities incentive program in 2006). If we meet the target TICR, LTIP participants will receive their STIP payouts without penalty. (Performance between the two levels will be interpolated.) This additional emphasis on safety for company leaders highlights the importance of management's role in setting expectations regarding safety and serving as role models for other employees.

# DUKE ENERGY DUKE ENERGY OHIO

# SUMMARY OF MANAGEMENT POLICIES, PRACTICES AND ORGANIZATION GAS PERFORMANCE SUPPORT DEPARTMENT

SFR Reference: Chapter II(B)(9)(a)(ii)

# I. Policies and Goal Setting

The policies of the Gas Performance Support Department (Department) evolve from and support the objectives of the Company. The Director, Gas Performance Support, implements the policies and objectives under the direction of the Senior Vice-President, Gas Operations. These include policies regarding development and conduct of employee training and safety programs, and for code and regulation interpretation. The Department also supports the corporate policies and objectives through department directives, procedures and practices.

The goals of the Gas Performance Support Department are designed to support the goals of Gas Operations and business plan of the US Franchised Electric & Gas (US Franchised E&G). Determination of the objectives and goals is based on a decision process involving the Senior Vice-President, Gas Operations; the Director, Gas Performance Support; and the staff of the Department. See attached Exhibits CGO-2 and CGO-3 for the Gas Operations goals and objectives.

Gas Performance Support goals are published to make all employees aware of the department expectations. To assure continuous attention to the team and individual goals, departmental goals become part of the annual key performance appraisal process for department employees.

The Director of Gas Performance Support periodically reviews goals with personnel to assure their support and implementation. Staff meetings are held regularly, to review progress of work plans. When problems are identified, corrective actions are established and target deadlines are set.

Gas Performance Support is responsible for the development and conduct of training and safety programs, code and regulation interpretation, process improvement and providing financial support to all areas of Gas Operations.

#### II. Strategic Planning

Strategic planning is accomplished at the officer level and is used to develop the US Franchised E&G business plan. Gas Performance Support planning directly

supports the strategic plan developed for Gas Operations which supports the US Franchised E&G business plan.

Examples of strategic planning by the Department are:

- Development of training programs around new methods of installation and new equipment to improve service and reduce costs; and
- Benchmarking is utilized to determine ranking within, and performance compared to, the Natural Gas Distribution industry.

# III. Organizational Structure

The Gas Performance Support Department is headed by a Director who reports to the Senior Vice President of Gas Operations. Gas Performance Support is organized by four (4) functional areas:

- Training;
- Regulatory Compliance;
- · Process Improvement; and
- Financial Support.

An organization chart of Gas Performance Support is provided in Exhibit GPS-1.

# IV. Responsibilities

The Department has the responsibility of developing and conducting employee training and safety programs. In addition, the Department develops and conducts training and safety programs for Company contractors, public authorities, police and fire departments. The Department also develops standardized methods and procedures and requires proper and safe use of tools and equipment.

The Department also has responsibility for code and regulation interpretation, assisting with the auditing process both internally and externally, reporting and follow-up with State and Federal Commission Offices, when appropriate and within the compliance timelines.

The Department is responsible for Process Improvement activities through out Gas Operations as well as Benchmarking with other companies within the Natural Gas Distribution industry to determine Duke Energy Ohio's ranking within, and performance compared to other companies.

In addition, this Department provides financial support to Gas Operations. Examples of financial support include annual budget preparation, budget to actual variance analysis, financial modeling, various statistical reports, and rate case work.

### V. Practices and Procedures

The practices and procedures of the organization are continually being formulated and refined to provide the necessary guidelines for all personnel in meeting the goals and objectives of the organization and the Company.

Specific duties of the Gas Performance Support Department include, but are not limited to:

- Effectively develop and conduct employee training and safety programs;
- Effectively develop and conduct training and safety programs for Company contractors, public authorities, police and fire departments;
- Provide code and regulation interpretation, coordinate compliance audits with State and Federal Regulatory Agencies;
- Coordinate process improvement and benchmarking efforts; and
- Provide financial support to Gas Operations.

# VI. <u>Decision Making and Control</u>

Decisions are made at the lowest appropriate level consistent with impact and authority. In making decisions, recommendations and information are received by the Director, Gas Performance Support from the direct reports. All decision-making is designed to include participative style of management.

Decisions that impact a segment of the Company broader than Gas Performance Support are discussed with the Senior Vice President of Gas Operations. The Group Executive, President & Chief Operating Officer of US Franchised E&G is consulted as deemed appropriate. Depending on the type of decision and the degree of impact, this discussion could range from merely informative to requiring formal approval. The Director, Gas Performance Support and the Senior Vice President, Gas Operations discuss, in general terms, the activity of the Department on a routine basis. Although these discussions are informal in nature, they are ongoing, keeping both parties informed.

### VII. Internal and External Communication

As a means of assisting in the decision making process, both internal and external communications are maintained. Internal communications are accomplished within the department by the preparation of weekly status reports, informal meetings, periodic staff meetings and daily discussions. Also, internally, discussions and input are obtained as needed from the Gas Construction and Maintenance, Gas Engineering, Gas Commercial, Rates, Finance and Accounting, and Legal Departments.

External communications include: State and Federal Regulatory Agencies, other governmental agencies, participating in meetings with other utilities as well as actively participating on various committees of the American Gas Association, Ohio Gas Association, Kentucky Gas Association, and Midwest Energy Association

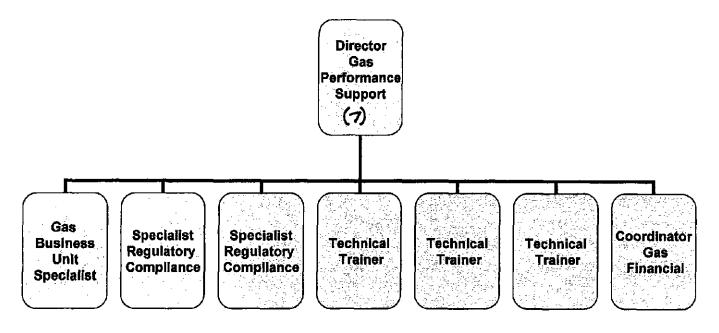

# VIII. Goal Attainment Quantification

Goals and the corresponding methods of measuring goal attainment are formulated annually by management. Department employees are evaluated annually on the attainment of individual goals. Individual goals are established in support of department goals. Some examples of specific goals are:

- Tracking Operating Expenses and Capital Expenditures;
- Employee Safety;
- Meet compliance requirements and continue open and effective relationships with regulators; and
- Offer employee development opportunities.

# DUKE ENERGY CORPORATION MANAGEMENT STRUCTRUE

# **Director Gas Performance Support**

# 2007 Ohio/Kentucky Gas Operations Objectives

# 1.) Meet 2007 Financial Targets

- Meet targets for Gas Ops Non-AMRP O&M and Non-AMRP CAPx
- Achieve Gas Ops AMRP O&M and AMRP CAPx targets

# 2.) Enhance Operational Performance

- Ensure the operational metrics for Gas Ops are exceeded for safety, service reliability and customer satisfaction
- Ensure Gas Ops is developing and growing net plant and is cross-training, developing and encouraging continuing education of employees
- Identify and implement Interruptible Transportation Billing Program (ITBP) solution
- Ensure the integrity of the natural gas system is maintained through responsible planning, design, construction, operating and maintenance of the system

# 3.) Achieve Regulatory Compliance

- Ensure the compliance metrics for Gas Ops for regulatory compliance (including environmental), customer complaints, recovery of cost of gas and regulatory treatment for trackers and audits impacting Gas Ops such as AMRP, cost recovery audits and performance management audits are achieved
- Develop 2007 Ohio Gas Rate Case Strategy addressing issues of ownership of curb to meter services, GCR Sales Function and Riser Replacement Report

# 4.) Foster Team Collaboration

- Develop Training Strategy and implement Training Plan for Gas Ops
- Design and begin implementation phase of FE&G GIS and EAM systems
- Treat employees with respect and provide them the training and tools necessary to perform their work functions in a safe environment

# 5.) Define Employee/Organization Strategy

- Implement Workforce Planning/Development Strategy
- Identity long-term organization structure for Gas Ops

# A Note on Safety:

In addition, to recognize management's critical role in building a zero-injury culture with a focus on preventing safety incidents, a safety objective for company leaders will be based on the Duke Energy company wide TICR (total incident case rate) goal for 2007. Total incident case rate is a common industry standard used to measure safety performance. The threshold goal for 2007 will be 1.67. The target goal will be 1.43.

Under this safety objective, if Duke Energy does not meet the minimum TICR, company leaders' short-term incentive plan (STIP) payouts will be reduced by five percent (similar to the zero-fatalities incentive program in 2006). If we meet the target TICR, LTIP participants will receive their STIP payouts without penalty. (Performance between the two levels will be interpolated.) This additional emphasis on safety for company leaders highlights the importance of management's role in setting expectations regarding safety and serving as role models for other employees.

# DUKE ENERGY DUKE ENERGY OHIO

# SUMMARY OF MANAGEMENT POLICIES, PRACTICES AND ORGANIZATION POWER DELIVERY ELECTRIC SYSTEMS OPERATIONS SFR REFERENCE: CHAPTER II (9)(B)(a)(i,ii)

# Policy and Goal Setting

The Working Environment Policy Manual and other Duke Energy policy & procedure updates are provided to all employees. These form the general guidelines for the Company in the areas of employee relations, compliance with laws or governmental directives and Company relationships with the communities we serve. These policies, which are supported by the Department, are communicated through various informational meetings, written communication and internet web based applications.

Goal setting at the department level is accomplished by the Vice President and other departmental leadership. The goals are formulated to support and complement the primary objectives and business plan of the Franchised Electric & Gas business unit. Specific initiatives developed from the goals identify objectives, implementation schedule, milestones, responsibilities, and resources required. The goals, once developed by the Department, are presented to the Power Delivery Senior Vice President for review and, upon approval, are incorporated into the business plans.

# II. Strategic Planning

Planning for the Department is the responsibility of the Power Delivery Electric Systems Operations Vice President with input from the General Managers, Directors and Managers. Strategic planning is coordinated and monitored collectively with all departments in Power Delivery utilizing input from key support groups like technical services, transportation, materials management, finance, and human resources.

Each Department supports Power Delivery's strategic plan and corporate goals and objectives through the following on-going activities:

• Facilitate an injury-free and environmentally responsible work environment

- Review customer service results and create action plans for improvement
- Develop, monitor and project department budgets for cost management
- Establish performance expectations and evaluate employees on a regular basis
- Evaluate and improve operational processes
- Use of special project teams to investigate and provide recommendations on process improvement opportunities

The Power Delivery Strategic Plan is attached as Exhibit PDESO-2.

# III. Organizational Structure

Power Delivery Electric Systems Operations is under the direction of a Vice President who reports to the Senior Vice President of Power Delivery and the Group Executive, President and Chief Operating Officer of U.S. Franchised Electric & Gas. Six positions report to the Power Delivery Electric Systems Operations Vice President:

- General Manager of Electric System Operations Engineering & Services
- General Manager of Midwest Transmission & Distribution Operations
- Director of Carolinas Transmission Operations
- Director of RTO Activities
- Director of Midwest Control Area Operation
- Director of Carolinas Control Area Operations

Four managers with two supervisors report to the General Manager of Midwest T&D Operations.

The organizational charts for the Senior Vice President of Power Delivery and vice President Electric Systems Operations are shown in Exhibit PDESO-1.

### IV. Responsibilities

The objective of Electric Systems Operations is to operate and control the transmission and distribution systems in the safest, most economic and reliable manner, as well as coordinate interchange with interconnected systems and monitor the balance of resource and demand to help ensure system reliability in the region as well as within the service territory.

Midwest Control Area Operation (MCAO) is responsible for the coordination of all electric energy transfers between Duke Energy and interconnected systems in the Midwest, the coordination and exchange of operating data with the Midwest Independent Transmission System Operator (MISO), the balance of resources and demand, and the coordination of emergency procedures, as required by the North American Electric Reliability Corporation (NERC) reliability standards, Reliability First Corporation regional reliability standards, and applicable regulatory responsibilities. MCAO is responsible for the after-the-fact energy accounting associated with its role as a NERC balancing authority, MISO metered data management agent, and provider of services associated with retail choice in Ohio, including the calculation of the loads of all Certified Retail Electric Providers serving switched retail load in the Duke Energy Ohio system.

Electric Systems Operations Engineering & Services is responsible for maintaining the emergency plans and supporting materials for bulk power and civil emergencies, providing engineering support to the Department, creating, maintaining and interpreting transmission-related contracts and tariffs, regulatory reporting activities, and providing project management for special projects within the Department including NERC compliance and Operator training.

RTO Activities is responsible for the execution of the Regional Transmission Organization (RTO) activities at Duke Energy and supporting the Duke Energy initiatives regarding RTOs.

Midwest Transmission & Distribution Operations is responsible for the day to day safe, economic, and reliable operations of the electric transmission and distribution system using a computer based Energy Management System (EMS) for supervisory control data acquisition (SCADA); and for planning and scheduling transmission and distribution system maintenance outages.

# V. Practices and Procedures

The major duties of Midwest Control Area Operations (MCAO) are as follows:

- Implement emergency procedures up to and including the reduction of firm load to maintain the integrity of Duke Energy's Transmission System and the Eastern Interconnection;
- Monitor regulating reserves, contingency spinning, and supplemental reserves to verify that proper levels are maintained, and notify the responsible entities when the reserves reach unacceptable levels;

- Monitor compliance to the NERC generation control standards such as the Control Performance Standards (CPS) 1 and 2 and the Disturbance Control Standard (DCS);
- Monitor the Midwest Contingency Reserve Sharing Group (CRSG), Automatic Reserve Sharing System (ARS) and as necessary initiates requests for contingency reserve assistance from CRSG members, or provide contingency reserve assistance when requested by other CRSG members on Duke Energy's behalf;
- Monitor the Security Coordinator Information System (SCIS) and the MISO Messaging System for emergency notices for forwarding to proper personnel. MCAO is the primary contact between Duke Energy's Midwest Transmission & Distribution Operations and the MISO Reliability Coordinator;
- Enter Generation outages into the MISO Outage Scheduler. Information is updated in real-time as necessary so that MISO can use the information in the calculation of their network model and reliability-constrained economic dispatch;
- Monitor tie line interconnections and generation in real-time, taking action
  as necessary to correct problems impacting generation control or the
  provision of accurate data to the MISO;
- Coordinate Net Scheduled Interchange (NSI) with MISO, and coordinate Dynamic Schedules with other Balancing Authorities;
- Monitor NERC tagging software (OATI) and MISO Physical Scheduling System (PSS) for proper tagging and scheduling of the energy transactions;
- Confirm monthly energy accounting data with other Balancing Authorities, Transmission Providers, Independent Power Producers and Marketers;
- Send five-minute non-conforming load forecasts to MISO at one-minute frequency starting from MISO Day 2;
- Verify all actual interchange with each interconnected Balancing Authority;
- Verify the transfer of power associated with jointly owned generating units on an hourly basis, after the fact including units operated by American Electric Power, Dayton Power and Light, and Duke Energy.
- Calculates loads for all Network Transmission Customers on the system.
   This data is used to calculate various ancillary services charges, which are billed by MCAO. These loads are also provided to the Midwest ISO.

 Acts as the Meter Data Management Agent for all Certified Retail Electric Providers, Duke Energy Ohio, Duke Energy Indiana, Duke Energy Kentucky, Indiana Municipal Power Agency, Wabash Valley Power Authority, Hamilton, Buckeye, Ohio Municipalities, etc. In this role, MCAO provides hourly generation and load data to the MISO for market settlements.

The major duties of RTO Activities are as follows:

- Represent Duke Energy's interests at MISO stakeholder meetings
- Support the MISO Transmission Owners
- Provide input into MISO business practices
- Monitor MISO filings and business practices
- Monitor the regulatory environment for changes in rules regarding RTOs
- Provide testimony regarding MISO costs and benefits in state regulatory proceedings in Ohio, Kentucky and Indiana

The major duty of Midwest Transmission & Distribution Operations (Midwest T&D Operations) is to control and operate the Duke Energy Ohio and Duke Energy Indiana transmission and distribution systems in a safe and economical manner consistent with federal, state, local, and industry guidelines. In order to perform its duties, Midwest T&D Operations must on a daily basis:

- Work with MCAO and the MISO to assure the transmission system is operated within transmission line loading limits and service voltage constraints.
- Coordinate, process, and prepare switching operations for the daily equipment outage work requests on the transmission and distribution system for Power Delivery Field Operations.
- Coordinate planned bulk transmission outages with MISO;
- Utilize Power Flow system security analysis application programs to identify potential problems or contingencies and study steps to relieve contingency related problems. All actions for 138kV facilities and above to be directed by and coordinated with the MISO;
- Maintain operation of the system in a reliable manner in conjunction with MISO, MCAO, and Operations Engineering take the necessary steps to:
  - Implement the NERC TLR process;

- Initiate Generation re-dispatch via MISO procedures;
- Complete any necessary system reconfiguration;
- Implementation of Manual Load Curtailment.
- Prepare switching operation procedures for the line and substations equipment;
- Analyze daily service interruptions;
- Direct and coordinate all switching operations on the transmission and distribution system.

# In addition to its daily activities, Midwest T&D Operations must:

- Maintain and provide information used for system statistics and reports used by regulatory and other governmental agencies;
- Prepare operating instructions for the system substations;
- Represent the Company in the area of system operations at hearings and other legal proceedings of various regulatory agencies;
- Represent the company at utility meetings in the area of system operations;
- Plan and schedule network outages and coordinate emergency service restoration; and
- Perform the following duties to support and administer the policies and direction set by Electric System Operations Engineering & Services;
  - Develop, maintain and drill the emergency plans and supporting materials for bulk power and civil emergencies;
  - Support the administration and planning for operator training to achieve and maintain NERC certification for operating personnel;
  - Provide engineering and information systems support for Electric System Operations;
  - Provide responses to inquiries made by the State (Indiana Utilities Regulatory Commission, Kentucky Public Service Commission, Public Utilities Commission of Ohio, and Federal Commissions (Federal Energy Regulatory Commission);
  - Prepare, maintain and interpret transmission and distribution related contracts and tariffs;
  - Represent the Company at utility meetings and various operating committee meetings in the area of transmission services;
  - Direct and assist in the preparation of interconnection agreements and other transmission related agreements with neighboring utilities and the MISO;

 Represent the Company at various MISO committees and meetings.

# VI. <u>Decision Making and Control</u>

The responsibilities for planning and decision making rests with the organizational level that has the information and facts to make sound judgments based on Company policies, procedures and regulatory directives, and the authority to take effective action. The decisions made by specific levels of management are relevant to the basic purpose of their position.

Daily, monthly, and quarterly operational reports including outage and financial are used to monitor progress and provide a means of evaluating decision making.

# VII. Internal and External Communication

Power Delivery Electric System Operations must work closely with a number of other departments within the Company in order to carry out its responsibilities. Because of the complexities involved in the daily operation and maintenance of the electric transmission and distribution system, the Department maintains working relationships through various channels of communication with many departments including:

- Other Power Delivery Departments
- Duke Energy Ohio President
- Environmental Health & Safety
- Gas Operations
- Engineering Technical Services
- Information Technology
- Power Generation
- Government & Regulatory Affairs
- Real Estate & Facilities Services
- Customer Contact Centers
- Legal
- Supply Chain
- Human Resources

Internal communication channels (verbal, e-mail, suggestions, etc.) are structured in a way that provides information in a timely manner to all personnel within the Department. Internal communication is accomplished through a variety of
