**SECTION 4 - DESCRIPTION OF SERVICE AND RATES, (CONT'D.)**

**4.11 ISDN PRI**

(N)

**4.11.1 General Description and Availability**

ISDN-PRI provides the Customer with simultaneous access, transmission and switching of voice, data and imaging services via channelized transport. ISDN-PRI is provisioned at the 1.544 Mbps rate via the Primary Rate Interface standard of the Integrated Services Digital Network (ISDN). ISDN PRI is available only to customers in the Cleveland, Ohio exchange. A 1-year, 2-year, or 3-year contract is required.

**4.11.2 Service Configurations**

One or more Service Configurations can be combined to create an ISDN-PRI Service Arrangement. A Customer may have multiple ISDN-PRI Service Arrangements per location; however, for each Service Arrangement one Service Configuration 1 must be included. The controlling D channel will always reside on Service Configuration 1. The D channel is a 64 Kbps channel that carries signaling and control for the B channels. The capabilities of the D channel are contained within the Customer's Service Configuration.

- A. Service Configuration 1 - This configuration must be the first Service Configuration for any ISDN-PRI Service Arrangement. Service Configuration 1 provides twenty-three (23) 64 Kbps B channels and one (1) primary 64 Kbps D signaling channel. The bearer (or B) channels are used for information transfer between users. B channels provide the same features as Local Trunk Basic and Local Trunk DID. To receive the DID capability, Customer must order DID telephone numbers separately.
- B. Service Configuration 2 - This configuration is only available in conjunction with Service Configuration 1. It provides an additional twenty-four (24) 64 Kbps B channels which are controlled by the D channel on Service Configuration 1. Multiple Service Configuration 2 may be associated with a Service Configuration 1 subject to switching equipment limitations.
- C. Service Configuration 3 - This configuration is also only available in conjunction with Service Configuration 1. It provides a backup 64 Kbps D channel and twenty-three (23) additional 64 Kbps B channels. The backup D channel will control and route all of the B channel traffic of a single PRI Service Arrangement in the event the D channel on Service Configuration 1 fails. A maximum of one Service Configuration 3 may be included with each ISDN-PRI Service Arrangement. Service Configuration 3 is available subject to switching equipment capabilities.
