 RE: DEIS/REX LLC  
 Docket CP07-208  
 Catherine Rowe  
 78 Mound Road  
 Wilmington, OH 45177

Dear Ms. Bose,

Darn, that must have been an impressive Technical Conference that REX put on for you! The old dog and pony show! Unfortunately, REX LIES AGAIN. You people at FERC have to be so darned gullible if you can sit through any meeting and believe what REX has to say. You must just sleep and pray for a break. Well, hopefully they laid out a nice lunch spread for you all. Isn't that one of the perks when one of the richest men in the world wants something from you? He can certainly afford a nice spread. And be sure you send REX a nice big invoice for all your time. We, the folks along the pipeline, want to make sure Treasury gets a nice big check to cover the cost of your time while sitting and listening to REX lies.

Right off the bat REX says they have 100% agreement on compressors station locations including permanent access roads in Ohio. Right away I find an article from Monroe, Ohio saying they are working with REX but have many unresolved issues and won't make a decision until March 18, 2008. See article below and REX lies claims on page 3.

Regards, Ms. Rowe

## Monroe delays gas pipeline talks

City has a number of concerns about Rockies Express' project.

MONROE — Monroe's Planning Commission postponed discussion regarding a site plan application from Rockies Express Pipeline Tuesday night, Feb. 19, until additional concerns can be resolved about the project.

Rockies Express proposes to build a \$33 million natural gas pipeline compressor station and electrical substation on a 23-acre site south of Greentree Road and west of Interstate 75 with portions in Monroe and Turtlecreek Twp.

Rockies Express requested that the case remain on the table in an e-mail sent to the city Sunday, said Kevin Chesar, Monroe's director of development.

The commission initially delayed discussion about the site plan

application on Jan. 15. The five-member group agreed to leave the case on the table during its regular meeting upon the recommendation of Chesar.

"The city is working with Rockies Express to try to address various issues we have," Chesar said.

The concerns include mounding and landscaping requirements for the proposed project site, screening of structures, Homeland Security and disaster plan contingencies, fire suppression requirements that deal with waterlines and Ohio Department of Transportation proximity to Interstate 75 issues, he said.

Rockies Express also has given the city a sample plan for disaster plan contingencies that they've used at one of its other gas pipeline sites, he said.

"What we're looking into now is partly the water and fire suppression side of it, as well as some other outstanding issues (providing underground utilities to the site) that they need to address that we require from any site plan," Chesar said.

If all concerns are addressed, he said the commission could place the case back on the table for discussion at its next meeting at 6 p.m. on March 18.

The company says it needs to build a compressor station about every 200 miles to help pump gas along a planned 1,679-mile high pressure natural gas line that will stretch from Colorado to eastern Ohio.
